California Heat Assessment Tool (CHAT): CHAT was funded by the California Natural Resources Agency and was developed in 2019 to help state and local public health officials understand how heat vulnerability will change with increasing temperatures due to climate change. Metro’s bus stops were rated based on heat index, using data from the CHAT. CHAT’s Heat Health Action Index is a statistically weighted result of the social vulnerability, health, and environmental factors (including tree canopy) for each Census Tract and is intended to represent a community’s overall heat vulnerability. The Heat Health Action Index ranges from 0 to 100.

**The total score is the sum of the six individual criteria scores, multiplied by a factor of 5/6, which normalizes the six criteria to a scale with a maximum score of 100.*
