Re: Opposition to Adoption of Modified Alternative 5 – Sepulveda Transit Corridor Project

Dear Chair and Members of the Metro Board of Directors:

I am writing as a resident of the Santa Monica Mountains hillside community. I have lived in the area close to Beverly Glen Boulevard and Mulholland for the past 28 years. I respectfully urge the Board **not to adopt Modified Alternative 5** as the Locally Preferred Alternative (LPA) at this time. The alternative advanced by the Planning & Programming Committee on January 14, 2026, raises significant unresolved CEQA, safety, and procedural concerns that require further study before any responsible agency action can be taken.

1. Modified Alternative 5 was not disclosed or analyzed in the Draft EIR.
Modified Alternative 5 poses a new alignment along Beverly Glen Boulevard that affects our community, but neither the DEIR nor public discourse made us aware of this new alternative. CEQA requires that an agency circulate for public review any new alternative that differs substantially from those analyzed in the Draft EIR and that may cause new or more severe impacts. Modified Alternative 5 introduces materially different alignments, tunneling depths, and portal locations that were never subject to public notice, technical review, or comment. Adoption of an undisclosed alternative at the LPA stage would undermine the integrity of the CEQA process and expose Metro to avoidable legal risk. which is causing were not made aware of this alignment during the public co

2. The geotechnical and seismic analysis remains incomplete.
The Santa Monica Mountains contain complex faulting, landslide zones, and highly variable geology. The Draft EIR acknowledges data gaps and the need for additional borings and slope stability analysis. Modified Alternative 5 increases tunneling under steep, fire-prone terrain without providing the necessary geotechnical substantiation. Selecting an LPA without this information is premature and inconsistent with CEQA's requirement for informed decision-making.

3. Wildfire evacuation and emergency access impacts are inadequately addressed.
The hillside communities along the alignment—including Bel Air, Beverly Glen, and surrounding neighborhoods—depend on a limited number of evacuation routes. The Draft EIR

does not evaluate how construction closures, haul routes, or portal operations would affect evacuation times during a wildfire or seismic emergency. Modified Alternative 5 intensifies these risks by adding construction activity in constrained canyons without providing mitigation or alternatives analysis.

4. A recirculated Draft EIR is necessary before selecting an LPA.
Given the introduction of a new alternative, the incomplete technical studies, and the potential for new significant impacts, Metro should direct staff to **recirculate the Draft EIR** with a complete alternatives analysis and updated technical sections. This approach strengthens the project, improves public trust, and reduces litigation exposure.

5. A more balanced and publicly vetted alternative remains achievable.
Metro has the opportunity to advance an alternative that meets mobility goals while respecting the environmental constraints of the Santa Monica Mountains and the safety needs of hillside communities. A recirculated EIR would allow for a fair comparison of feasible alternatives, including those with lower geotechnical and evacuation risks. *Please revisit an alternative that would run along or underneath the 405 Freeway.*

I support the effort to create a public transit between the San Fernando Valley and the Westside. However, due to these reasons, I respectfully request that the Board **decline to adopt Modified Alternative 5** and instead direct staff to complete the necessary studies and recirculate the Draft EIR. This is the most responsible path forward for both the region and the communities directly affected by this project.

Thank you for your consideration and for your service to Los Angeles County.

Sincerely,

Amy Jacobs

FOR Metro Board January 22, 2026 Meeting, Agenda Item 10, 2025-1062
Sepulveda Transit Corridor Project

Subject: SOHA Supports Modified Alternative 5

By unanimous vote of our Board, the Sherman Oaks Homeowners Association supports the Metro Board's recommendation of Modified Alternative 5 as the Locally Preferred Alternative for the Sepulveda Transit Corridor Project. This modified alternative uses modern driverless heavy rail technology as a subway under Van Nuys Blvd in the San Fernando Valley.

The Sepulveda Transit Corridor Project "Bait-and-Switch": Why Metro's Latest Pivot is a Failure of Transit Democracy

BOB BLUE / JANUARY 15 2026

Comments

LA TRANSPO - For four years, the residents of Los Angeles have waited for Metro to deliver an honest, technical evaluation of how to fix the Sepulveda Pass. We were promised a transparent process where public input would shape the future of our city's most critical transit link.

Instead, on the eve of a major milestone, Metro staff has performed a procedural "bait-and-switch." By introducing "Modified Alternative 5"—a hybrid project that was never presented to the public for review—Metro is attempting to bypass the very environmental laws designed to protect the public's voice.

A Self-Imposed Crisis

Metro will likely argue that they must move quickly to secure funding or meet deadlines. However, the current rush is a self-imposed problem created by years of administrative delays. While the public is now being asked to accept a Modified plan without a formal review period, the history of this project shows a pattern of internal stalling and shifting goalposts.

The project was originally supposed to release its Draft EIR in late 2022, but Metro pushed that target to late 2023, citing the need for complex technical analysis of the various rail and monorail alternatives.

That deadline was missed as well; the release was pushed again to early 2025 as Metro integrated Pre-Development Agreement concepts from private partners and refined station locations. By the time the document actually reached the public in June 2025, the project was nearly three years behind its original schedule.

These internal delays continued into the selection of the Locally Preferred Alternative (LPA). What was originally intended to be a decision made in early 2025 was moved to June 2025, and finally to the Metro's Planning and Programming Committee January 14, 2026 meeting. This isn't a response to a sudden emergency; it is the result of a planning process that has lost its way due to internal mismanagement.

The Outreach Smokescreen: 15,000 Comments on the Wrong Project

Metro is currently touting its "historic" engagement levels—22 public meetings, 12,000 engaged stakeholders, and over 15,000 comments. They point to these numbers to suggest the project has been thoroughly vetted.

But there is a glaring flaw in this logic: What was the point of all that outreach if the final recommendation is an alternative the public never saw? The 8,000 comments submitted during the Summer 2025 DEIR period were based on five specific alternatives. None of those 8,000 comments were about "Modified Alternative 5." By using the public's feedback to create a new "hybrid" and then moving immediately to a vote, Metro has effectively silenced the very people they claim to have engaged. Outreach is supposed to be a dialogue, not a "feeder" for a secret design phase that bypasses final public scrutiny.

The Illusion of Choice

Public remarks from committee members, such as Ara Najarian, suggest that the deliberation that happened at MTA's Planning and Programming Committee meeting was largely performative. When leaders signal their preference for specific high-cost heavy rail configurations before the "Modified" impacts are even studied, the entire CEQA process becomes an exercise in backfilling a pre-determined conclusion. If the decision was already made behind closed doors, why did we spend millions of taxpayer dollars on a Draft EIR for alternatives that were never going to be picked?

The Legal and Moral High Ground

Under the California Environmental Quality Act (CEQA), the purpose of a DEIR is to allow the public to weigh in on environmental evaluations. You cannot weigh in on something you haven't seen. Modified Alternative 5 is a new project with a new alignment on Van Nuys Boulevard and a new phasing plan that could leave the Valley with a half-finished line for decades. These are fundamental changes to the project's scope.

Metro Can Do It Right

The solution is not to double down on a procedural error by silencing the public. It's not too late for Metro to make it right by:

- Postponing the selection of the Locally Preferred Alternative (LPA).
- Properly studying the specific environmental and technical impacts of this new "Modified" hybrid.
- Conducting genuine outreach in the communities specifically affected by the new Van Nuys alignment.
- Recirculating the DEIR to comply with the law and ensure that "meaningful public participation" is more than just a buzzword.

Los Angeles deserves a world-class transit system, but we shouldn't have to sacrifice our right to a transparent government to get it. Metro must stop moving the goalposts and start following the rules.

Chapter 8.
Mid-Century Transit: 1948-1971

The Federal-Aid Highway Act built the highways that California is now famous (or perhaps infamous) for, but those highways did not bring the freedom of movement they had promised for many. Cars are expensive to own, insure, and operate, and the effects of automobile pollution and the stresses of driving, felt both by drivers and non-drivers are disproportionately felt by marginalized communities, restricting their movement and thus participation in Californian daily life. Everything from pollution, time wasted that could instead be used for life, work, and play, to the psychological stress of driving: all negatively impact the quality of life of commuters. And, as the stories of the Golden State Freeway and the Santa Monica Freeway show, the land required to build freeways was often taken from existing communities, and caused immense racialized devastation to those communities, leaving scars on our urban environments that can be seen decades later. But even as late as the 1970s, the state still attempted to build new freeway projects like the SR-2 through Beverely Hills, which faced fierce opposition from local communities who witnessed the destruction caused by other freeways.

While SR-2's construction was halted, transit corridors remained overburdened through the increasing dependency on cars, and few alternative solutions were being proposed to move commuters. Continued over-investment and reliance upon freeways were choking Los Angeles. It seemed that the freeways were not the transportation solution that many had hoped for. Many of the problems associated with car-centric infrastructure weren't immediately apparent to city officials, while others were. These

problems stemmed both from car-dependency itself as well as ancillary effects on local communities.

For example, the space surrendered to cars restricted the available housing stock and contributed to inefficient and unsustainable land use in our cities, including Los Angeles. This takes the form of the land used for substantive freeway connections and interchanges, land for parking, and for lanes on city streets necessary to support the flow of traffic off-freeways. Land used for parking is essentially undeveloped and does not generate tax revenues for cities. Asphalt used in road construction is additionally unable to regulate heat during the day. Roads and parking lots contribute heavily to urban heat effects, raising the temperature of cities significantly. When large avenues or boulevards, like Wilshire, or Vermont in downtown Los Angeles are considered, this problem is more apparent, forming trenches that magnify heat trapped by skyscrapers and tall buildings. Car dependency also has had significant effects on public health. Motor vehicle accidents alone, have killed more Americans than combat fatalities from World War One, World War Two, and the Vietnam War combined. The effects of pollution, including lung diseases, and cancer further push those numbers up.

These trends, favoring the car and the motorist were only possible through considerable government subsidies, and their effect on urban environments strongly affected the progress of urban decay in the United States in the 60s onwards. Road building and networks favoring high speed for cars make cities a more unfriendly environment to pedestrians through pollution, heat, restricted freedom of movement, and the risk from collisions. These policy decisions were the result of several decades of political structures favoring the expansion of suburbs, directly and indirectly, which

had become the new centers of American life, eclipsing traditional urban centers. The short of it was that the mid-20th century was a difficult period for public and regional transit agencies in the United States.

Still, there were those who recognized that the situation facing American cities were the result of these policy decisions and were thus not uncontrollable or irreversible. Mid-century authors like Lewis Mumford, and Jane Jacobs for example, wrote extensively about the negative effect of the car on cities, and how grand-plan cities like those imagined in the 1930s and 40s did not produce the kinds of cities that their planners originally envisioned. Jacobs especially wrote extensively on the necessity to design cities that considered human scale, which the automobile was commonly incompatible with. The growing complexities of cities, as well as a growing trust in the power of statistics led to a mid-century shift in urban planning and the emergence of the urban planner. Until the 1950s and 60s, urban planning was considered a subfield of architecture and was more of an art than a science. This era included the kinds of cities envisioned by Le Corbusier and Frank Llyod Wright's Broadacre. By contrast, urban planners combined different fields of expertise, including statistics, engineering, and social science to understand the behavior and function of modern cities as a scientific discipline. This new profession advocated for revitalization of American cities, but there was wide disagreement as to whether this meant embracing or rejecting the automobile. The debate in urban planning was contested fiercely, where it became a battle of public opinion and a key issue in modern politics. It is from these policy debates that began in the mid-century in which the idea of a new transit system for Los Angeles emerged.

This professional paradigm shift began with concerned citizens who were those most immediately affected by the shift toward the automobile. Rapid post-war urbanization and the desire to rebuild and renew after the Second World War meant there was a frenzy of different activists and organizers who each had their own ideas for how to move people and goods around. We start this chapter in 1948, when the Rapid Transit Action Group, a special interest and advocacy group sponsored by the Los Angeles Chamber of Commerce published their call to action for the LA city council to affirm support for constructing a rapid transit system.

Rapid Transit Action Group of Los Angeles—Rapid Transit Now!

Cover of the Rapid Transit Action Group's 1948 Report, *Rapid Transit Now!*

The Rapid Transit Action Group was a citizen led committee, with representatives from the city, county, and state government. Chaired by businessman LeRoy M.

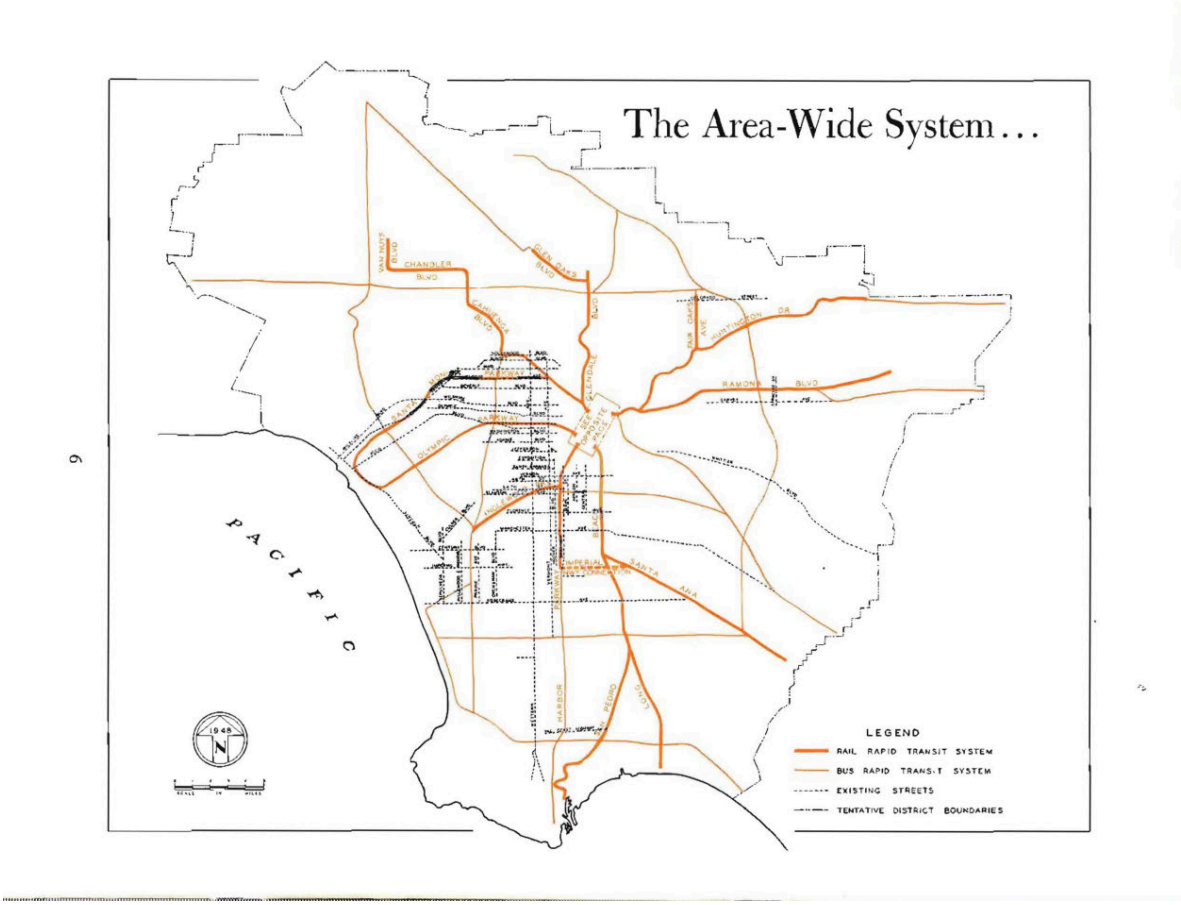
Edwards, who was an executive of the Southern California Gas Company and the president of the Los Angeles Chamber of Commerce, it was mostly led by businessmen who were concerned about traffic congestion affecting their businesses in downtown Los Angeles. The committee had the support of Governor Earl Warren, who invited them to submit their report to the state government as part of ongoing budget discussions for state freeways. In 1948 they published a call-to-action entitled *Rail Rapid Transit Now!* that urged the city of Los Angeles to consider a modern rapid transit system. Their proposal was for a transit system that would parallel the freeways, working in conjunction alongside them, and linking suburban areas to downtown. The Rapid Transit Action Group argued that the freeways under construction in Los Angeles were necessary, but that they were only a single part of the future transportation needs of the city. Their report said plainly, “Freeways are basic.” Boldly, the group also stated that the popular use of the bus as a method of mass transit was insufficient for the city’s transit needs, as they did not have the capacity required for the growing city, and that they contributed to traffic just like cars.

The Rapid Transit Action Group envisioned that such a rapid transit system would work with the existing Pacific Electric and Los Angeles Railway and help to revitalize it. Their plan was therefore one of the first to consider the freeways as part of the transportation grid, and to consider the problem of transit planning in Los Angeles as multi-modal, utilizing both rail, and bus. Representatives from the Pacific Electric and L.A. Transit lines were included in discussions with the committee and worked together to conduct a survey of the necessary transit lines of the Los Angeles area. The

committee argued that a system servicing the greater Los Angeles area would benefit pedestrians, commuters, and drivers. For drivers they stated, “Those who do not have to use automobiles will be attracted to rail rapid transit.” For pedestrians, “He has easy access to the rapid transit service.” And for commuters, “The total time of the surface and the rapid transit ride will be a great deal less than the present.” The Rapid Transit Action Group was primarily motivated by the potential efficiency and economic opportunity that their proposal could bring, but their report concluded that “rail rapid transit will make it possible for more people to live in the community. Trading areas will be expanded. Property values will be stabilized,” believing that a rapid transit system would be a net benefit to all. Unlike existing Pacific Electric lines, the model proposed by the Rapid Transit Action group would be designed to emphasize speed and frequency into and out of Los Angeles. A dedicated, exclusively passenger service would be able to achieve service speeds that surpassed the shared Pacific Electric tracks, and its equipment would be modern, capable of higher acceleration and offering better comfort to passengers.

The Rapid Transit Action Group used the expertise of the Pacific Electric in order to produce cost estimates for the proposed system in 1948. The estimated total cost given was approximately 309 million dollars, which they believed could be raised from bonds and taxes, raised by a Metropolitan Rapid Transit District, empowered to acquire land for necessary right-of-way and to hold liabilities. Operating the system annually would come to an estimated cost of nearly 52 million dollars per year. Importantly, the rail system would not utilize or take away funding from the existing freeways, or

freeways which were already under construction; “Funds must come from some source other than highway-user taxes.” The committee, in stressing this point, both reiterated that their proposed system was cooperative, not competitive, and acknowledged the car was here to stay.



The Rapid Transit Action Group’s proposed map for a Rail Rapid Transit system of Los Angeles. Many of the proposed routes bear a striking similarity to existing routes used by LA Metro.

The Rapid Transit Action Groups proposal would never come to be and is an interesting “what-if” scenario, but the reasons why the proposal failed are equally as provoking. The proposed rail network never went further than simple consideration, as the Los Angeles City Council never voted to support a resolution adopting the Rapid

Transit Action Group's plan. Their proposal nonetheless caught the attention of the public and it was notable enough that it prompted a response from a State Assembly fact-finding committee that investigated transit solutions. The same year, the Los Angeles Traffic Survey Committee published its own reports on Los Angeles traffic that was a growing problem. The reports published by these two groups, in 1949 and 1948 respectively, may very well have set the city back decades in its transportation planning and construction.

The Los Angeles Traffic Survey Committee published its report first, in 1948: *Street Traffic Management for Los Angeles: Appraisal and Recommendations Prepared for the City of Los Angeles* (1948.) The traffic committee was comprised of members from the Automobile Club of Southern California, the Automative Safety Foundation, and the LA city government. Data was collected from aerial (collected from a blimp donated by Goodyear) and street-level surveys which supervised and recorded traffic flow in Los Angeles. In its introduction, the committee makes its position clear that traffic problems in Los Angeles were due to poor traffic management in the city, in this case, the lack of adequate motorways, off-street parking, and expressways. The Traffic Survey Committee's findings embraced the development of Los Angele's freeways as the solution to its traffic and congestion problem, writing glowingly of their construction, "Less than 20 miles of freeways are in existence today, but heartening progress is being made." The emphasis of the report was on the need to develop better infrastructure for cars and trucks, and how improving driving conditions would enable smoother traffic flow through the city.

This report was heavily focused on the infrastructure required for motor vehicles, and it almost entirely ignored mass transit considerations. Needs of the pedestrian were tertiary, at best, and ignored at worst. The report makes no mention of the Pacific Electric, nor the Los Angeles Railway or Los Angeles Transit Lines. Transit is stated to be important, but there is little to no information or suggestions on how mass transit could support the city that is given. At several points throughout the report, the committee even contradicts its claims to mass transit's importance, even at times deriding it as an obstacle or hindrance. "The freeway… can move large traffic volumes smoothly and safely. Sharing no right of way with pedestrians or mass transit, with all remedial and marginal frictions eliminated, the properly designed freeway becomes the logical answer." In its final recommendations, the committee calls for a Department of Traffic Engineering and proposed a work structure that included staff entirely focused on road and street management, making no mention of any staff positions for mass transit at all. In effect, the report's over-emphasis on street and roadway management misrepresented the importance of Los Angeles's transit network and favored the movement of vehicles rather than people.

The Rapid Transit Action Group's plan did not fare any better before the State Assembly. Instead of discussing the merits of the proposal, the State Assembly discussed the possibility of an alternative plan which they arbitrarily considered a better solution for mass transit needs for Los Angeles. The state assembly specifically questioned the Rapid Transit Action group's proposed use of freeway medians and shared rights-of-way. They also nebulously questioned the nature of the plan as "a plan" rather than *"the plan."* In effect the State Assembly presented the Rapid Transit Action

Group as presumptuous. The alternative that they provided was a monorail, envisioned by businessman George D. Roberts, who had been promoting his Monorail Engineering and Construction Corporation.

Robert's proposal was not the first of its kind. There were other promoters and authors who had imagined monorails servicing a future Los Angeles as early as the 1920s. These ideas were mostly speculative and imaginative, and ranged from monorails that ran above city streets to ones that ran over the beaches along the coasts. Roberts, however, believed the monorail to be a serious transportation option not only worthy of consideration, but the *only* reasonable option. Roberts had championed the idea of a monorail patterned off the German Wupperbahn, a suspended monorail that runs in Wuppertal Germany over the Wupper river. He was able to gain enough popular support and enough allies in the State Assembly and Senate for his monorail that in 1951 Governor Earl Warren signed a bill entitled the *Metropolitan Rapid Transit District Act,* that created a new transit authority for Los Angeles, which was instructed to investigate a monorail system. While this bill created what would eventually become a public transit operator, it still left Los Angeles without a clear future public rapid transit system.

LAMTA—Los Angeles Metropolitan Transit Authority

In Los Angeles, the effect of exclusive support for the freeways on its public transit system was devastating. Planning a monorail would take time, and considerable resources, and did not provide solutions for the problems LA was already faced with. As passengers moved to cars, the electric railroads in Los Angeles lost revenue with declining ridership and ceased operations without government support. Already

deteriorating, the rail lines were ignored and abandoned. In 1940, Pacific Electric service to Gardena and Torrence ceased, and the San Pedro line altogether stopped accepting passengers that same year. The Pacific Electric discontinued these services due to low ridership and were disinterested in continuing with bus replacement services due to the low density of the areas serviced. Aside from a brief exception to carry Navy and Marine servicemen during the Second World War, the San Pedro line remained a freight-only line until 1949 when it closed permanently. The rapid closure of many of the Pacific Electric's and the Los Angeles Railway's lines led to several cities forming their own municipal services in response. Torrence and Gardena formed Torrence Transit and Gardena Municipal Bus Lines (now GTrans) on the same day, January 15th, 1940, to replace services provided by the Pacific Electric. These services continue to operate today.

The Pacific Electric ceased passenger operations altogether, including their bus services in 1953, and by 1958 the Los Angeles Railway closed. Both of the streetcar services were transferred to the new public agency created by the State Assembly, the Los Angeles Metropolitan Transit Authority. The LAMTA, Torrence Transit, and Gardena Municipal Bus Lines (along with Montebello Bus Lines, Santa Monica Municipal, and the Culver City Bus) were the earliest efforts to support regional and municipal public transport but they faced uncertain futures. They did not necessarily cooperate with one another. Several of the routes were originally created to fill existing gaps in the Pacific Electric's service, such as the Montebello Bus Lines or the Culver City Bus. The Culver City Bus existed primarily because of a dispute between Henry Huntington and the then Mayor of Culver City, Reve Houck. Others existed primarily to address the decline of the

Pacific Electric and continue to ensure a minimum of public transit in their service areas. There were no agreements on integrating routes or schedules to operate their systems cooperatively. They faced a skeptical public, a disaffected government, aging equipment, and a lack of funding. Nevertheless, the LAMTA was the first publicly operated transit service in the city of Los Angeles and was Los Angeles's first attempt to address the decline in public transit services. However, the LAMTA's primary function was still to study the feasibility of building Roberts's monorail, from Long Beach to Panorama City, via downtown Los Angeles, and not to act as the interim operating service for the remaining streetcars.

Despite this, the LAMTA's powers were gradually expanded to continue the operations of the remaining transit services in the Los Angeles area, as it became clear that such a monorail could not be built in time to replace the closing lines. However, a lack of funding and ridership gradually resulted in many of the former rail lines under the LAMTA to be closed anyway. In California (and indeed in the larger US,) railroads and streetcars were not thought of as something that municipal governments should run—it was not seen as a governmental responsibility and so funding them was not a priority. The LAMTA was forced to utilize legacy equipment, including older PCC cars that had been in service with the Los Angeles Railway and the Pacific Electric. The continued use of aging equipment contributed to the perception of the railroads as obsolete, further exacerbating the decline in ridership. The last remaining line, the LAMTA V line, a former Los Angeles Railway line running from Los Angeles City College to Pacific Crossing, was closed in 1963. This line would have crossed what are now the Metro's

modern B/D lines at Vermont and Beverly, and Vermont and Wilshire, as well as the E line at Vermont and Exposition, and the A Line at Vernon and Long Beach.

The LAMTA's goal, however, was much more complex than simply continuing to operate existing lines, or to plan for new ones. Nor was it simply building a new network, like the proposed monorail. Instead, the LAMTA's main goal was much harder, and much more abstract: the LAMTA had to win back public trust in mass transit.

How to do this was not at all clear. Historic suspicion of the railroads ran deep in the Los Angeles area. Actions taken in bad faith by Henry Huntington, and his heavy-handed approach towards establishing a monopoly made many city governments distrustful of public transit. The unreliability of the Pacific Electric near its end also made riders distrustful of its services and pushed government officials towards indifference for its passing. Moreover, the LAMTA, like every other transit agency in the United States, faced the public's infatuation with the car and personal transport. Driving had become an assumed right, and a strong pillar of American identity. Public transit would only be accepted if it did not interfere or infringe upon that right. Many began to question why Californians even needed public transport. Torrence for instance almost voted to disband their bus network in 1959, but a veto from the mayor, Albert Isen, prevented its dissolution.

Later, Urban decay contributed to hostilities toward transit when cities came to be seen as dangerous, or even desolate places. With political power in the mid-century tending to favor the growing middle class in suburban areas, transit planning continued to gravitate towards the freeways which linked the suburbs to workplaces in the city, and which were accessible to wealthier suburbanites who owned cars, but not to urban

residents who did not. LAMTA needed to convince working professionals of the convenience of mass transit, of its safety, and of its advantages over private cars. In Los Angeles this was no easy task. Los Angeles was the first major American city to have its major development after the introduction of the automobile. LA is, for better or for worse, a city that has been shaped by the car and has grown a distinctive car culture because of it. It would be hard for even the best public relations manager to convince commuters in LA to get on the bus when Californians loved their cars.

This was one of the reasons why the LAMTA was tasked with investigating the construction of a monorail specifically, a technology that was seen as futuristic, if not wholly realistic. The expectation was that any new mass transit system for Los Angeles would need to be exceptional, even extravagant. As an LAMTA transit report itself said, “It must be fast, comfortable, convenient, reliable, and safe, and to such a degree as to furnish service competitive with the private automobile.” Problems, however, rapidly became evident with the monorail. The first of these was a potentially unethical relationship between the LAMTA and George Roberts, who had become exceptionally and unprofessionally close to the agency. A controversy emerged when the Metropolitan Coach Lines and the Los Angeles Transit Lines buses had shown that George Roberts was selling potentially overvalued stocks, taking advantage of his relationship with LAMTA executives as the assumed contractor for the Los Angeles monorail, effectively engaging in insider trading. The bus services exposed this relationship and impropriety in response to the LAMTA seeking tax exempt status for the monorail, concerned that a tax-exempt monorail would effectively put them out of

business as private operators. Ironically, the LAMTA would later merge the two bus services together and take control of their networks, becoming the municipal operator.

Despite this, the LAMTA continued to investigate the monorail, seeking other corporate partners. Famous Los Angeles architect Victor Gruen and his company Victor Gruen and associates were part of community planning for the intended routes. The LAMTA sought the services of Kaiser Steel which provided consulting and analysis, as well as Alweg, the Swedish-German monorail company that also built the Disneyland monorail. Alweg's chief designer and engineer, Axel Lennart Wenner-Gren presented his monorail to the Los Angeles Board of Supervisors in 1954, where he told them, "I drove around your city and I saw that you are in great need of swift and safe passenger transportation." His monorail became the most famous in the world after its opening at Disneyland, partially because of the aerospace-inspired, futuristic styling designed by Disney artist Bob Gurr. Science Fiction author Ray Bradburry wrote in support of the monorail, and it was popular with county officials such as Frank Bonneili. Disney invited LAMTA and Los Angeles city officials to his Anaheim Park to view the monorail, which had been nearly completed, giving Alweg a significant advantage in their bid. At the same time, defense contractors and aerospace manufacturers Lockheed and Northrop, both from the Los Angeles area, began prototyping monorail designs for the Seattle Century 21 Exposition which were submitted as potential designs for the Los Angeles monorail. Problems with their designs would eventually lead to Alweg winning the contract for Expo 21. All three contractors would scale up their systems to make them more suitable for mass transit requirements and to fulfill the LAMTA's needs.

The second problem the MTA faced, however, was its governmental authority. There was a continuing problem where the MTA would find itself legally unable to enact the policies to carry out its work and objectives and would find itself needing to return to the state assembly in order to petition for new powers. This included acquiring the right of way to build monorail lines, and the ability to raise funds through taxes. These expansions of its authority were often piece-meal and given to only fulfill immediate requirements rather than future ones. As one example, in 1957 the LAMTA's powers were expanded to give them greater operational capability over the new lines they had acquired since 1951. It also expanded its transportation study of Los Angeles to include any and all methods of transportation that would service the Los Angeles area. While this gave the LAMTA more flexibility, it did not empower them to begin new construction. This was the only major expansion of the LAMTA's powers in its lifetime—it replaced the text of the 1951 Metropolitan Rapid Transit District Act. The ability to explore other options, ironically, also introduced new issues. LAMTA quickly pivoted away from the monorail proposal as it became increasingly apparent that no such system would be practicable for the Los Angeles area and instead began studying more traditional and ready-to-build transport systems, including rail lines and bus lines. The initial proposal favored by the LAMTA was a rubber-tired subway train that would also run on elevated sections outside the Los Angeles city limits to the suburbs. Like the Alweg monorail, these trains would use rubber tires and would therefore be better adapted to deal with slopes and gradients but would function as trains with tracks and their own right-of-way, controls, and signaling. Rubber tire trains also had the advantage of being a proven technology. Several other subway and metro systems used similar trains, including the

Paris Metro, the Mexico City Metro, and the Montreal Metro, with contractors who had more experience and a record of delivering large transit systems.

LAMTA's decision to step away from the monorail was a complex one. There is a myth surrounding the LAMTA's decision to abandon the monorail, often shrouded in the same narrative that surrounds the decline of the Pacific Electric. The allegation is that the LAMTA deliberately sabotaged their own efforts to construct a monorail in order to appease the oil and gas industry in California, and General Motors. This is commonly evidenced by the fact that LAMTA had significant contracts with GM for their coaches and buses, and that several of the executive members of the LAMTA's governing board had financial or personal ties with the company. While these facts are true, they themself don't show enough to support the claims that the LAMTA deliberately sabotaged itself. They also ignore the fact that many of the parties accused in such conspiracies including GM and less often, Michelin, were also involved in public transport. GM owned EMD which built passenger locomotives, and Michelin was a contractor who built rubber-tired metros.

So why did the LAMTA abandon the monorail? LAMTA's frequent opaqueness makes speculation of the exact reasons difficult, but reading through the numerous consulting reports given to the LAMTA provides a few explanations. The first was that there was extensive disagreement as to what exactly building a rapid transit system would cost, and price estimates given for monorail systems had large price variations that would give good reason to leadership to be cautious of agreeing to such proposals. Cost was already such a significant problem that the LAMTA had had to scale back its proposed construction twice. The original two routes from the San Fernando Valley at

Reseda to Long Beach and from Covina to Santa Monica were reduced to just one route, a much shorter line from El Monte to Century City that would be known as the “Backbone Route.” It was hoped that the revenue from this route would be able to cover the cost of future construction, as models showed that this would be the busiest transit corridor. Later, the Backbone Route proposal itself was cut in half, covering only the portion from downtown Los Angeles to Century City.

Another significant problem was that monorails were an unproven and uncertain technology, which was reflected in the price ambiguity. No large-scale monorail for urban mass transit had ever been built anywhere else in the world before. The only comparison that fulfilled a role similar to the one the LAMTA was exploring was the Wuppertal Monorail, which was built in exceptionally unique circumstances, and which was unlike any of the monorail proposals that they had been presented with. When Kaiser Steel submitted their report to the LAMTA, the document indicates that the LAMTA was already aware of this problem. The reported stated that its two goals as given by the LAMTA were to find “[The] lowest possible first cost” and to find a system with “Proven reliability and safety without embarking on an extensive and costly research and development program.” As the LAMTA spent more time researching the transportation options available to them, it seems that its leadership began to become concerned about the feasibility of the monorail technology, which explains first its shift to rubber tired trains, and then later, a traditional subway on steel rails and steel wheels.

A third reason why the LAMTA’s decision to pull back from the monorail proposal can be found in the behavior of the contractors themselves. For lack of a better term, as the LAMTA began to explore other options, the major contractors began to present

increasingly desperate bids to the city, with increasingly lower prices, but also increasingly shorter operating segments. Alweg, Northrop, and Lockheed all had invested significant time and resources into their monorail designs, and LAMTA's work in investigating other options made the bidding market much more competitive. In the case of Alweg, the fate of Dr. Wenner-Gren's company, which only built monorails, was on the line. In 1963, Wenner-Gren made a proposal to build the shortest operating segment, from Downtown to Century City for a cost of nearly 147 million dollars, nearly a fifth of the cost estimates given either for a subway or a rubber-tired metro. George Roberts, who had been earlier driven out of consideration by the scandal involving his stock sales, attempted to save his company by selling a monorail proposal in San Francisco. His proposal in San Francisco, similarly to the ones made by the remaining contractors in Los Angeles were exceptionally grand, promising to deliver exceptional results and making sweeping claims about how monorails were the only viable option. With the action of the bidding contractors in mind, LAMTA's leadership may have seen the monorail as a poor investment, because the trustworthiness of the contractors came under increasing scrutiny. If the LAMTA had agreed to these contracts, they potentially could have had to deal with increasing costs as the complexity of the monorail would only become apparent during construction. Externalities associated with building a rubber-tired metro, or a subway would be easier to predict, and better able to be accounted for in any planning budget in a way that the unproven monorails simply couldn't without extensive testing the LAMTA was looking to avoid.

Whatever justifications the LAMTA used for axing the monorail, they weren't apparent to the public. By now, the LAMTA had spent more than a decade on planning

and research, with no new systems built. The public was increasingly frustrated with the lack of progress, and the decision to switch to an entirely different method of transportation after so much time had been spent investigating the monorail had cast doubt on its organizational capabilities. Even though the decision to switch to a subway was likely entirely because it would be easier to construct, and offer more reliable service, the higher price tag enraged the general public. So much money already had been spent, and with nothing but a hand-me-down bus fleet to show for it. This was perhaps the biggest challenge that the LAMTA faced, and it was one that was largely self-imposed. Opacity at the LAMTA, and the fact that its leadership was appointed by the Governor made them seem unaccountable and disinterested in the needs of the people of Los Angeles. Moving away from the monorail proposal and to a separate method of transport did not help this perception. Little explanation was given, and there was no transparency behind the decisions made by its governing board. These two facts in conjunction soured opinion on both the LAMTA and public transit in Los Angeles.

This opacity is likely part of where the myth surrounding the end of the monorail project emerges from, and is what ultimately contributed to the end of the LAMTA itself. By now, several city officials were so frustrated with the LAMTA that they had actually been attempting to work around it in an effort to get some kind of rapid transit available to the city in a meaningful timespan.

The LAMTA was ultimately forced to play with the hand it was dealt. Without the ability to build new routes, or restore parts of the Pacific Electric, it was forced to rely on its buses, something which the Rapid Transit Action group argued was insufficient.

Seemingly aware of its own limitations, or perhaps of the need for quick solutions, many of the LAMTA's initial studies outside of the monorail proposal were focused on the possibilities of utilizing buses to meet the transportation needs of Los Angeles. These studies analyzed the assumption that the LAMTA would be able to fulfill its responsibility as the main carrier for Los Angeles by taking advantage of the already existing freeway and road network. These freeways were paid for by the state and federal government, and buses were cheap, and readily available from manufacturers like GM. Inheriting the fleet of buses from Los Angeles Transit Lines and from Metropolitan Coach Lines also meant that the LAMTA had vehicles to experiment with. They also provided solutions that could be implemented very quickly and without significant investment, providing immediate results, giving the LAMTA desperately needed good publicity. Significantly for LAMTA, buses and coaches could provide transit service without having to compromise or infringe on the driving rights of private drivers. In many places, the LAMTA found that rapid bus transit could be feasibly achieved. Similar studies being conducted in San Francisco mirrored the efforts of the LAMTA and also seemed to yield positive data, lending credibility to the idea.

But in the majority of the LA area, the LAMTA ran into the same problem that all other transit providers in LA faced, and the same problem which the city has faced since its founding—Los Angeles covers a wide area, and in many places is sparsely populated. When few alternatives existed, this fact benefited the Los Angeles Railway and the Pacific Electric, which themselves ironically contributed to this spread. Density outside the downtown area, however, drops quickly out towards the city's periphery. To service as many people as possible, lines would need to stop frequently and only pick

up a few passengers at a time. This fact itself dissuades ridership as it would make such services more inconvenient than a personal car.

Therefore, the LAMTA reasoned that it would be easier to have buses use the existing freeway network to reach downtown Los Angeles, as this would be a more efficient and attractive system for riders. In this setup, these buses would have few stops and only go to major destinations. If the buses were running along the freeway, and assuming that the buses could have their own dedicated lanes, or even better, their own dedicated right-of-way, they could theoretically achieve the speeds required for rapid transit. The idea was not without precedent. Cities on the east coast had already begun to create exclusive right-of-way for buses, either through converting lanes to bus only lanes or giving them their own roads. Providence's East Side Trolley tunnel, a former trolley tunnel, was converted to allow buses to pass under College Hill and gave rapid transit access between the city's business district near Thayer Street and its East Side. The East Side Trolley Tunnel, and the concept created by the LAMTA would now be considered examples of bus rapid transit, or BRT, a system of mass transit that has become quite popular due to its ease of construction and relative flexibility. For a time, it seemed like bus rapid transit systems would be the solution for mass transit in American Cities, including Los Angeles. Buses that ran along freeways could achieve speeds that would rival those of heavy rail systems, and with enough vehicles could also fulfill the ridership demands. LA Metro itself utilizes BRT systems today, including along the Metro G and J lines.

However, outside of these corridors, they would be limited to restricted speeds on city streets and encounter the same problem that earlier Pacific Electric and Los

Angeles Railway lines faced. The LAMTA believed that these problems would likely prevent buses on their own from competing with the convenience of the car, as travelling on the freeways would prevent the buses from reaching the places people wanted to go, and where people lived, but leaving them would negatively impact their speed and frequency. Alternatively, even in areas where the population density was high, buses could not reliably achieve the speeds needed for rapid transit because of already existing traffic, unless their own right-of-way was constructed—lane conversion alone would be insufficient. This was the case for proposed buses traveling over the 101, or the 405 through the Cahuenga or the Sepulveda passes, where congestion on the freeway would limit the effectiveness of rapid bus transit.

LAMTA's comprehensive study from 1955 into bus rapid transit determined that using freeway buses was not an effective means of getting commuters into Los Angeles. Sacrificing ridership for speed would not solve any of the existing transport problems, and sacrificing speed for coverage would defeat the goal of providing an attractive alternative to private cars. The study and the problems above are examples of a fundamental problem that any transit system or supply chain will face. What LAMTA was dealing with is a variation of the "last mile" problem. This is the problem which describes the difficulty in getting people to and from transportation hubs to their final destination. Because Los Angeles is so widespread, it requires many different transit hubs that provide linkage to downtown. The study of the best way to link these hubs is what determines what makes or breaks any successful transit service, including the LAMTA. There is no one-size-fits-all approach to solving the last mile problem--What solution works for one region might not work for another. As simply put as possible

however, if transport networks are too far away from riders, too difficult to get to or to use, or take too long to get to their final destination, they will be discouraged from riding them. It seemed that the wisdom of the Rapid Transit Action Group rang true--Los Angeles would need more than a single method of moving riders around.

The LAMTA's goals were ambitious but had very little chance of success with the limited resources they had available. Without additional support the LAMTA was little more than a stopgap to stave the bleeding of Los Angeles's public transit network. Despite this, it would be unfair to say that LAMTA did not leave an impact or did not create a path for future development. While the LAMTA had little power to construct new lines, it did produce a series of successive reports that identified the challenges that any transit planners in the Los Angeles area would need to address both in their time, and in ours. The LAMTA produced technical documents and studies that became the basis for future routes, and which projected the transportation needs of Los Angeles in the future. Importantly, LAMTA, as well as its successor agencies, produced a pool of technical expertise which could be drawn upon for future projects.

Federal Interventions

This same sentiment was not, however, limited to California. Many Americans by the mid-century saw American railroads as obsolete, or even dangerous. Trains were not something that were seen prestigious (with limited exceptions, such as the Santa Fe Super Chief, or the San Diegan.) Most passenger railroads in the US had not purchased new equipment in over twenty years and were running on legacy track and equipment. The fastest trains in the US, pulled by EMD E-series locomotives built over thirty years ago by the 1960s could reach speeds of 90 mph, while countries such as Japan, now

built trains like the Shinkansen, which were capable of speeds of up to 160 mph. Recognizing the need for change at the national level, President Lyndon Johnson authorized the creation of the Urban Mass Transportation Administration, the predecessor to the modern Federal Transit Administration through the Urban Mass transportation Act of 1964. Johnson intended the UMTA as part of his Great Society programs to combat poverty in the US and to revitalize its urban areas. The UMTA issued grants and funding for a federal transit program which would support regional transit projects throughout the United States. One of the first grants was a $13.1 million grant for the Bay Area Rapid Transit (BART) Orange line.

The same year, in order to address failings of the public transportation network in Southern California, the California state Senate passed the SCRTD “Transit District” Law establishing the Southern California Rapid Transit District. The Southern California Rapid Transit District, the SCRTD, or the RTD as it came to be known, was created to provide public transportation to the greater Los Angeles area, including the areas of San Bernardino, Orange, and Riverside counties. The SCRTD was sponsored by California State Senator Thomas M. Rees from Beverly Hills. The bill intended to correct problems with the preceding Los Angeles Metropolitan Transit Authority. Although the LAMTA had been given powers never before granted in the history of the state to form transit plans, and to purchase private lines through bonds, it could not raise any taxes, nor could it achieve its objectives without continued state and federal support. Additionally, the board governing the LAMTA did not have the authority to exercise eminent domain which prohibited construction except in existing right-of-way. While it successfully consolidated all of the private services in Los Angeles under one umbrella service, it did

not have the resources to build a rapid transit system, including the originally proposed monorail from Long Beach to the San Fernando Valley.

A New Regional Network: The Southern California Rapid Transit District.

The SCRTD on the other hand, was more empowered than LAMTA. The SCRTD could raise revenue through taxes, and it could issue bonds. It also had more power to regulate private lines and services in the greater Los Angeles area.

Conclusion

The SCRTD and the LACMTA were intended to fix the problems that existed with the LAMTA. Whereas the LAMTA's leadership was non-permanent, consisting of non-experts in transportation engineering or planning, and appointed by the governor, the SCRTD and LACMTA better represented the regional needs of Southern California and Los Angeles. The LAMTA's leaders were mostly non-engineers. They navigated an incredibly difficult job with minimal staff and resources. Their reliance on outside consultants and engineering was expensive and prevented integrated planning with county and city officials. It was however, in retrospective, given the LAMTA's leadership and their lack of familiarity with the problems they faced. Despite this, they managed to provide important first steps for transport in Los Angeles. The records and documents produced by the LAMTA would become invaluable resources for the SCRTD and the LACMTA. Right-of-way surveys became the basis for routes that were proposed by the SCRTD and LACMTA, and the LAMTA's bus system formed what would become the first express busway in California: the El-Monte Expressway. Their model of express buses, their Freeway Flyer service, formed the basis for many of Metro's express buses, and buses like Foothill Transit's Silver Streak.

They also significantly identified what would NOT work for the city of Los Angeles. While the LAMTA has been described as inefficient, and even corrupt, not enough consideration has been given to the poor administrative structure and resources which was allotted to them. The LAMTA passed on speculative, and likely unworkable monorail proposals that would have set LA's transportation needs back by decades or even more. These moves were actually in service to the public interest, not examples of corruption, but despite this, the LAMTA learned quite harshly that perception matters greatly.

As the SCRTD and LACMTA took the lead on Los Angeles transport, the future seemed brighter. The SCRTD put stronger emphasis on its public image and its ease of ridership, taking advantage of television, newspapers, and mass communication to create a friendly service than the LAMTA. The LACMTA meanwhile would anchor the transit interests of Los Angeles and be a service immediately accountable to the citizens of Los Angeles in a way that the LAMTA wasn't. Together they should have been a panacea to LA's seemingly intractable traffic woes. As the 70s and 80s progressed, however, these two agencies would enter into a bitterly contested rivalry that also affected other transit services in the LA area. Nowhere was this more apparent than the construction of Los Angeles's first return to rail mass transit in nearly four decades: The Red and Blue Lines.

RE: Support for Modified Alt 5 recommendation for Sepulveda Transit Corridor

Dear LA Metro Board:

I'm writing on behalf of LA Forward Institute to express our strong support for the Sepulveda Transit Corridor (STC) Project and to urge Metro to **support the Metro staff recommendation of Modified Alternative 5**. This alternative prioritizes heavy rail as the most effective solution to the region's long-standing transportation challenges, and recognizes the importance of a direct, on-campus station at UCLA and a seamless connection to the D Line in Westwood Village.

The STC presents a once-in-a-generation opportunity to deliver high-capacity, efficient, and equitable transit between the San Fernando Valley and the Westside; two regions historically underserved by reliable public transportation.

Modified Alternative 5, in particular, is stronger than monorail options proposed by Alternatives 1 and 3. Those options will deliver slower travel (more than twice as long, at 24 minutes), daily ridership of under 62,000, and uncertain long-term operational costs. A heavy rail-based approach like Modified Alternative 5 also aligns with public sentiment— during Metro's outreach, 93% of comments favored tunnel-based rail solutions over monorail proposals, reflecting a strong community preference for minimizing disruption and maximizing reliability.

Moreover, Modified Alternative 5 provides a direct on-campus UCLA station, which we view as essential. With an estimated 18,000 average weekday boardings, it is projected to become the busiest non-transfer stop on the Metro system. The station would serve tens of thousands of students, faculty, staff, patients, and visitors, establishing UCLA as a key transit anchor for the region.

Lastly, Modified Alternative 5 offers a seamless connection to the D Line in Westwood. Such a connection, if built, would be the busiest stop on the Metro system, connecting over 33,000 daily commuters from the San Fernando Valley to Century City, Koreatown, and Downtown LA. Modified Alternative 5 paves the way for broader regional accessibility via connections to key destinations and transit lines.

Ultimately, this project has the potential to reshape how Angelenos move across the city, offering a transformative shift toward a more sustainable, connected, and equitable Los Angeles. In providing fast, reliable, and high-capacity service between historically underserved regions like the San Fernando Valley and the Westside, the STC can dramatically reduce car dependency, cut greenhouse gas emissions, and alleviate traffic congestion along one of the most gridlocked corridors in the country. The project also presents an opportunity to expand access to jobs, education, and healthcare.

Metro must select an alternative that centers proven technology, long-term sustainability, and rider-first planning—prioritizing ease of access, seamless connectivity, and the long-term public benefit over short-term cost-cutting or experimental systems. The right investment today will shape a more livable and resilient Los Angeles for decades to come.

We strongly urge you to approve Modified Alternative 5.

Sincerely,

[redacted]

David Levitus, Ph.D.

Subject: Sepulveda Transit Corridor Project:
Modified Alternative 5 with UCLA Gateway Plaza Station

Dear LA Metro Board of Directors,

Westwood Hills is a neighborhood adjacent to the UCLA campus and North Village. On behalf of the Westwood Hills Property Owners Association (WHPOA), I am writing to express our strong support for the Sepulveda Transit Corridor Project (STCP) Modified Alternative 5 with a UCLA campus subway station at Gateway Plaza. Gateway Plaza is the best campus station location.

We are concerned about a potential last-minute change for the on-campus UCLA station. UCLA Gateway Plaza, as described in the Draft Environmental Impact Report (DEIR), is the best location for this station as it is near the center of campus providing the greatest utility and highest ridership for the line. This location has easiest access to more portions of the University including the Medical Center and related clinics, science and engineering buildings, athletic facilities, other teaching and research facilities, dormitories and other portions of the campus to the north and east. Gateway Plaza truly is the best location for the STCP UCLA Campus station because it is a primary transit stop and designated transit hub. The BruinBus provides important connections around the campus and Medical Center for passengers disembarking at the station. Gateway Plaza also provides connections to the Santa Monica Big Blue Bus, the Culver City Bus, and Long Beach Transit Route 405. The sidewalks in this area have been improved and meet ADA standards for width, slope, firmness, stability and passing space. Other first mile-last mile mobility options, like rental bikes and scooters, are also available here.

UCLA's Gateway Plaza was the only campus location named, discussed or studied since 2021 (L.A. Metro Sepulveda Transit corridor Project "UCLA/Westwood Fact sheet "August 2021). Metro's STCP community meetings always listed UCLA's Gateway Plaza as the campus underground station and portal location. UCLA's late date request for a different location for a campus station has limited community comments on this alternative location and the impact it would have on other communities.

There are a myriad of safety concerns, topography logistics, student housing and night construction, ambulance route to Reagan Medical Center - Emergency Entrance, and construction disruptions, among other issues that were not studied or evaluated for the alternative campus station of Gayley and Strathmore, which UCLA's leadership is now suggesting.

UCLA leadership in their STCP DEIR August 30, 2025 comments, for the first time expresses concern about construction disruption and is rethinking the station location. Since the Planning and Feasibility phase of the STCP which began in 2017, Metro had been working with UCLA to identify a location for the station on its campus. UCLA lobbied for a direct single seat ride to campus and how it would enhance access to the hospital,

Pauley Pavilion, student and faculty access, Royce Hall and all the campus buildings. Now UCLA leadership is reconsidering what they initially asked for.

We are confident that the analysis conducted during the Final EIR and EIS can and adequately respond to any concerns about construction and operations of the line and station in the middle of campus. We note that the Pantages Theater in Hollywood did not miss performances during construction of the B/Red Line in Hollywood, when older and more disruptive construction methods were in use. More recently, during construction of the D/Purple Line Extension, we note that the historic Saban theater was able to maintain operations as were hotels, restaurants, offices and retail in Beverly Hills and Century City. As for operations of the below ground rail line adjacent to sensitive medical and other scientific equipment on campus, we note that the current B/Red Line travels adjacent to, if not beneath, three major medical centers – Kaiser Sunset, Children's Hospital Los Angeles, and Hollywood Presbyterian Medical Center – all of which also have sensitive equipment. Based on this real-life experience, we know that development of the Final EIR can answer any concerns that UCLA may harbor about the station location. We trust Metro to conduct this analysis and provide the answers and encourage UCLA to maintain open to this information.

To reiterate, WHPOA strongly supports the STCP Modified Alternative 5 to connect the San Fernando Valley and the Westside with an underground, heavy-rail alignment, on-campus station at UCLA Gateway Plaza. We encourage the Metro Board to adopt the Locally Preferred Alignment at the earliest possible time to keep this project moving. We further encourage the Board to direct staff to conduct further study and community outreach during the development of the Final EIR and the Federal EIS about possible changes to the UCLA station location and take all steps to assuage the concerns stated by UCLA in their letter of August 30, 2025.

Respectfully yours,

Debbie Nussbaum

Re: Opposition to Adoption of Modified Alternative 5 – Sepulveda Transit Corridor Project

Dear Chair and Members of the Metro Board of Directors:

I am writing as a long-time resident of the Santa Monica Mountains hillside community. I respectfully urge the Board **not to adopt Modified Alternative 5** as the Locally Preferred Alternative (LPA) at this time. The alternative advanced by the Planning & Programming Committee on January 14, 2026, raises significant unresolved CEQA, safety, and procedural concerns that require further study before any responsible agency action can be taken.

1. Modified Alternative 5 was not disclosed or analyzed in the Draft EIR.
Modified Alternative 5 poses a new alignment along Beverly Glen Boulevard that affects our community, but neither the DEIR nor public discourse made us aware of this new alternative. CEQA requires that an agency circulate for public review any new alternative that differs substantially from those analyzed in the Draft EIR and that may cause new or more severe impacts. Modified Alternative 5 introduces materially different alignments, tunneling depths, and portal locations that were never subject to public notice, technical review, or comment. Adoption of an undisclosed alternative at the LPA stage would undermine the integrity of the CEQA process and expose Metro to avoidable legal risk. which is causing were not made aware of this alignment during the public co

2. The geotechnical and seismic analysis remains incomplete.
The Santa Monica Mountains contain complex faulting, landslide zones, and highly variable geology. The Draft EIR acknowledges data gaps and the need for additional borings and slope stability analysis. Modified Alternative 5 increases tunneling under steep, fire-prone terrain without providing the necessary geotechnical substantiation. Selecting an LPA without this information is premature and inconsistent with CEQA's requirement for informed decision-making.

3. Wildfire evacuation and emergency access impacts are inadequately addressed.
The hillside communities along the alignment—including Bel Air, Beverly Glen, and surrounding neighborhoods—depend on a limited number of evacuation routes. The Draft EIR does not evaluate how construction closures, haul routes, or portal operations would affect evacuation times during a wildfire or seismic emergency. Modified Alternative 5 intensifies these risks by adding construction activity in constrained canyons without providing mitigation or alternatives analysis.

4. A recirculated Draft EIR is necessary before selecting an LPA.
Given the introduction of a new alternative, the incomplete technical studies, and the potential for new significant impacts, Metro should direct staff to **recirculate the Draft EIR** with a

complete alternatives analysis and updated technical sections. This approach strengthens the project, improves public trust, and reduces litigation exposure.

5. A more balanced and publicly vetted alternative remains achievable.
Metro has the opportunity to advance an alternative that meets mobility goals while respecting the environmental constraints of the Santa Monica Mountains and the safety needs of hillside communities. A recirculated EIR would allow for a fair comparison of feasible alternatives, including those with lower geotechnical and evacuation risks. *Please revisit an alternative that would run along or underneath the 405 Freeway.*

I support the effort to create a public transit between the San Fernando Valley and the Westside. However, due to these reasons, I respectfully request that the Board **decline to adopt Modified Alternative 5** and instead direct staff to complete the necessary studies and recirculate the Draft EIR. This is the most responsible path forward for both the region and the communities directly affected by this project.

Thank you for your consideration and for your service to Los Angeles County.

Sincerely,

Community Impact Statement on Council File 26-0046
(Sepulveda Transit Corridor Project / San Fernando Valley / Westside / Los Angeles International Airport (LAX) / Modified Alternative 5 / Proposed Phasing Plan)

Position: **Support, if Amended**

Given the limited options for fast, efficient, and affordable travel between the San Fernando Valley, Westside, and Los Angeles International Airport, the Reseda Neighborhood Council supports the use of underground, automated heavy rail transportation with an alignment along Van Nuys Bl. for the Metro Sepulveda Transit Corridor project, as outlined in the Locally Preferred Alternative.

However, the loss of a station at Sherman Way will negatively impact the project's accessibility, usability, and convenience for bus riding stakeholders of Reseda and other Central Valley communities. Requiring an additional short transfer to the East San Fernando Valley light rail to access the subway is counterproductive to the goal of equitably reducing vehicle miles traveled on the 405 Freeway.

The Sepulveda Transit Corridor project is an incredible investment in our communities; such a project should serve our region instead of just reaching it. The impacts of losing Sherman Way Station will likely never be corrected in the future with an infill station or rail expansion, so the Reseda Neighborhood Council supports this Resolution if amended to advocate for the inclusion of a heavy rail station at Van Nuys Bl. & Sherman Way.

This community impact statement passed in a meeting held in accordance with the Brown Act with a vote of 11 yes, 0 no, 0 abstain, 0 ineligible, and 0 recused.

RE: Support for Modified Alternative 5 as the Locally Preferred Alternative for the Sepulveda Transit Corridor Project

Dear Metro Board Members,

The Valley Industry & Commerce Association's (VICA) Transportation Committee supports Modified Alternative 5 as the Locally Preferred Alternative (LPA) for the Sepulveda Transit Corridor Project and urges the Board of Directors of the Los Angeles County Metropolitan Transportation Authority to approve the recommended LPA, subject to the following considerations to strengthen project delivery and regional benefit.

As Metro advances this project, VICA stresses the importance of ensuring the corridor meaningfully serves Valley residents and employers. Adequate parking access will be critical, particularly during the initial operating segment, and VICA urges Metro to identify and commit to parking opportunities that allow Valley residents to access the system by automobile.

VICA supports implementation of an initial operating segment, provided Metro clearly affirms that the project is not complete until Phase 2 is fully constructed. Full build-out from the Van Nuys Metrolink Station to the E Line is essential to achieving the corridor's regional mobility and economic goals.

Additionally, VICA urges Metro to continue investigating connectivity to the Getty Center and other major regional destinations, which will strengthen ridership, accessibility, and the overall value of the project.

For these reasons, VICA supports Modified Alternative 5 and respectfully recommends that Metro incorporate these amendments to ensure parking access, full project completion, and regional connectivity remain central to project delivery as the project moves forward.

Sincerely,

[redacted]

Re: Sepulveda Transit Corridor Project, Modified Alt. 5 and Study of Bundy/Expo Connection – Support

Dear Chair and Members of the Board,

On behalf of BXP, the largest commercial office landlord in Santa Monica with over 2.3MM SF, we are writing in support of the Sepulveda Transit Corridor Project moving forward expeditiously with Modified Alternative 5. We also request that the Board give direction to study a connection to the Bundy/Expo station. Given the density of jobs and housing (both existing and planned) located near this station and along the line that connect to this station, Modified Alternative 5 with a Bundy/Expo connection will deliver the strongest benefits to our community and region.

Boston

Los Angeles

New York

San Francisco

Seattle

Washington, DC

We view high-capacity transit as essential infrastructure for meeting local mobility, climate-emissions, and economic-resiliency targets. Our property at the Santa Monica Business Park (SMBP) represents one of many thriving economic cornerstones of the southeast area of the City of Santa Monica. A link to Bundy would remove vehicles from local streets, reduce greenhouse-gas emissions, and support our clients' own sustainability mandates.

A reliable, fast and affordable public transit connection to the Sepulveda Transit Corridor at the Bundy Station would provide more options for those that live in Santa Monica to commute without a single-occupancy vehicle. Santa Monica notably has a robust pipeline of pending and approved housing projects that would be served by a connection at the Bundy/Expo station.

The Bundy extension would offer a seamless one-seat ride from the Valley to the Westside and onward to the E Line, enhancing regional job access without car ownership, increasing emissions reduction and congestion relief, and promoting equitable housing growth.

In sum, we thank the Board for your leadership and request that you move forward with Modified Alternative 5 and provide direction to study a Bundy/Expo connection.

Sincerely,

[redacted]

Melissa Cohen
BXP
VP, Development
Los Angeles Regional Director

Snap Inc.

Metro Board of Directors
Office of Board Administration
1 Gateway Plaza, Mail Stop 99-3-1
Los Angeles, CA 90012.

Dear Metro Board Members,

I am writing on behalf of Snap Inc. to comment in support of advancing Modified Alternative 5, the primarily underground heavy rail option for the Sepulveda Transit Corridor. This alternative offers the speed, capacity, and operational reliability necessary to serve a high-demand north–south corridor and to accommodate long-term growth in travel demand.

As the Board considers the project's southern terminus, careful attention should be given to connections with dense, transit-supportive land uses, including areas with significant existing and planned housing and employment, such as Exposition/Bundy, as well as high-quality transfers to the regional rail network. Aligning high-capacity rail with these conditions can help maximize ridership, system utility, and overall return on investment.

We appreciate the Board's consideration as Metro continues to evaluate options for this critical corridor.

Sincerely,

[redacted]

Re: Opposition to Adoption of Modified Alternative 5 – Sepulveda Transit Corridor Project

Dear Chair and Members of the Metro Board of Directors:

I am writing as a long-time resident of the Santa Monica Mountains hillside community. I respectfully urge the Board **not to adopt Modified Alternative 5** as the Locally Preferred Alternative (LPA) at this time.

The alternative advanced by the Planning & Programming Committee on January 14, 2026, raises significant unresolved CEQA, safety, and procedural concerns that require further study before any responsible agency action can be taken.

1. Modified Alternative 5 was not disclosed or analyzed in the Draft EIR.
Modified Alternative 5 poses a new alignment along Beverly Glen Boulevard that affects our community, but neither the DEIR nor public discourse made us aware of this new alternative. CEQA requires that an agency circulate for public review any new alternative that differs substantially from those analyzed in the Draft EIR and that may cause new or more severe impacts. Modified Alternative 5 introduces materially different alignments, tunneling depths, and portal locations that were never subject to public notice, technical review, or comment. Adoption of an undisclosed alternative at the LPA stage would undermine the integrity of the CEQA process and expose Metro to avoidable legal risk. which is causing were not made aware of this alignment during the public co

2. The geotechnical and seismic analysis remains incomplete.
The Santa Monica Mountains contain complex faulting, landslide zones, and highly variable geology. The Draft EIR acknowledges data gaps and the need for additional borings and slope stability analysis. Modified Alternative 5 increases tunneling under steep, fire-prone terrain without providing the necessary geotechnical substantiation. Selecting an LPA without this information is premature and inconsistent with CEQA's requirement for informed decision-making.

3. Wildfire evacuation and emergency access impacts are inadequately addressed.
The hillside communities along the alignment—including Bel Air, Beverly Glen, and surrounding neighborhoods—depend on a limited number of evacuation routes. The Draft EIR does not evaluate how construction closures, haul routes, or portal operations would affect evacuation times during a wildfire or seismic emergency. Modified Alternative 5 intensifies these risks by adding construction activity in constrained canyons without providing mitigation or alternatives analysis.

4. A recirculated Draft EIR is necessary before selecting an LPA.
Given the introduction of a new alternative, the incomplete technical studies, and the potential for new significant impacts, Metro should direct staff to **recirculate the Draft EIR** with a complete alternatives analysis and updated technical sections. This approach strengthens the project, improves public trust, and reduces litigation exposure.

5. A more balanced and publicly vetted alternative remains achievable.
Metro has the opportunity to advance an alternative that meets mobility goals while respecting the environmental constraints of the Santa Monica Mountains and the safety needs of hillside communities. A recirculated EIR would allow for a fair comparison of feasible alternatives, including those with lower geotechnical and evacuation risks. *Please revisit an alternative that would run along or underneath the 405 Freeway.*

I support the effort to create a public transit between the San Fernando Valley and the Westside. However, due to these reasons, I respectfully request that the Board **declines adopting Modified Alternative 5** and instead direct staff to complete the necessary studies and recirculate the Draft EIR. This is the most responsible path forward for both the region and the communities directly affected by this project.

Thank you for your consideration and for your service to Los Angeles County.

Sincerely,
Sandra and Allen Moshi

complete alternatives analysis and updated technical sections. This approach strengthens the project, improves public trust, and reduces litigation exposure.

5. A more balanced and publicly vetted alternative remains achievable.
Metro has the opportunity to advance an alternative that meets mobility goals while respecting the environmental constraints of the Santa Monica Mountains and the safety needs of hillside communities. A recirculated EIR would allow for a fair comparison of feasible alternatives, including those with lower geotechnical and evacuation risks. *Please revisit an alternative that would run along or underneath the 405 Freeway.*

I support the effort to create a public transit between the San Fernando Valley and the Westside. However, due to these reasons, I respectfully request that the Board **decline to adopt Modified Alternative 5** and instead direct staff to complete the necessary studies and recirculate the Draft EIR. This is the most responsible path forward for both the region and the communities directly affected by this project.

Thank you for your consideration and for your service to Los Angeles County.

Sincerely,

WHPOA

Subject: Sepulveda Transit Corridor Project:
Modified Alternative 5 with UCLA Gateway Plaza Station

Dear LA Metro Board of Directors,

Westwood Hills is a neighborhood adjacent to the UCLA campus and North Village. On behalf of the Westwood Hills Property Owners Association (WHPOA), I am writing to express our strong support for the Sepulveda Transit Corridor Project (STCP) Modified Alternative 5 with a UCLA campus subway station at Gateway Plaza. Gateway Plaza is the best campus station location.

We are concerned about a potential last-minute change for the on-campus UCLA station. UCLA Gateway Plaza, as described in the Draft Environmental Impact Report (DEIR), is the best location for this station as it is near the center of campus providing the greatest utility and highest ridership for the line. This location has easiest access to more portions of the University including the Medical Center and related clinics, science and engineering buildings, athletic facilities, other teaching and research facilities, dormitories and other portions of the campus to the north and east. Gateway Plaza truly is the best location for the STCP UCLA Campus station because it is a primary transit stop and designated transit hub. The BruinBus provides important connections around the campus and Medical Center for passengers disembarking at the station. Gateway Plaza also provides connections to the Santa Monica Big Blue Bus, the Culver City Bus, and Long Beach Transit Route 405. The sidewalks in this area have been improved and meet ADA standards for width, slope, firmness, stability and passing space. Other first mile-last mile mobility options, like rental bikes and scooters, are also available here.

UCLA's Gateway Plaza was the only campus location named, discussed or studied since 2021 (L.A. Metro Sepulveda Transit corridor Project "UCLA/Westwood Fact sheet "August 2021). Metro's STCP community meetings always listed UCLA's Gateway Plaza as the campus underground station and portal location. UCLA's late date request for a different location for a campus station has limited community comments on this alternative location and the impact it would have on other communities.

There are a myriad of safety concerns, topography logistics, student housing and night construction, ambulance route to Reagan Medical Center - Emergency Entrance, and construction disruptions, among other issues that were not studied or evaluated for the alternative campus station of Gayley and Strathmore, which UCLA's leadership is now suggesting.

UCLA leadership in their STCP DEIR August 30, 2025 comments, for the first time expresses concern about construction disruption and is rethinking the station location. Since the Planning and Feasibility phase of the STCP which began in 2017, Metro had been working with UCLA to identify a location for the station on its campus. UCLA lobbied for a direct single seat ride to campus and how it would enhance access to the hospital,

Pauley Pavilion, student and faculty access, Royce Hall and all the campus buildings. Now UCLA leadership is reconsidering what they initially asked for.

We are confident that the analysis conducted during the Final EIR and EIS can and adequately respond to any concerns about construction and operations of the line and station in the middle of campus. We note that the Pantages Theater in Hollywood did not miss performances during construction of the B/Red Line in Hollywood, when older and more disruptive construction methods were in use. More recently, during construction of the D/Purple Line Extension, we note that the historic Saban theater was able to maintain operations as were hotels, restaurants, offices and retail in Beverly Hills and Century City. As for operations of the below ground rail line adjacent to sensitive medical and other scientific equipment on campus, we note that the current B/Red Line travels adjacent to, if not beneath, three major medical centers – Kaiser Sunset, Children's Hospital Los Angeles, and Hollywood Presbyterian Medical Center – all of which also have sensitive equipment. Based on this real-life experience, we know that development of the Final EIR can answer any concerns that UCLA may harbor about the station location. We trust Metro to conduct this analysis and provide the answers and encourage UCLA to maintain open to this information.

To reiterate, WHPOA strongly supports the STCP Modified Alternative 5 to connect the San Fernando Valley and the Westside with an underground, heavy-rail alignment, on-campus station at UCLA Gateway Plaza. We encourage the Metro Board to adopt the Locally Preferred Alignment at the earliest possible time to keep this project moving. We further encourage the Board to direct staff to conduct further study and community outreach during the development of the Final EIR and the Federal EIS about possible changes to the UCLA station location and take all steps to assuage the concerns stated by UCLA in their letter of August 30, 2025.

Respectfully yours,

Debbie Nussbaum

Re: Sepulveda Transit Corridor Project Joint Support for Modified Alternative 5 and Study of Bundy/Expo Terminus

Dear Chair and Members of the Board,

The undersigned organizations write to express our strong support for advancing Modified Alternative 5 for the Sepulveda Transit Corridor. We also respectfully urge the Board to study locating the southern terminus at Bundy/Expo rather than Sepulveda/Expo.

Taken together, Modified Alternative 5 and a Bundy and Expo terminus best balance near term deliverability with long term system value. This approach strengthens regional connectivity to major job centers, improves construction feasibility and sequencing, and meaningfully future proofs the corridor for a Phase 2 extension to LAX.

1. Faster and more intuitive connections to Santa Monica
A Bundy and Expo terminus materially improves access to Santa Monica destinations that riders are trying to reach, including employment centers, educational institutions, and the E Line's most heavily used western stations. The Bundy and Expo location shortens transfer times to Santa Monica proper, reduces backtracking, and creates a more legible and rider friendly westside rail network. The Santa Monica/Barrington stop would also provide a connection to the Metro 4 and BBB 1, with Santa Monica Blvd likely being upgraded with BRT lanes west of the 405 and into Santa Monica. In practical terms, this improves trip quality today without compromising travel times for Valley to Westside riders.

2. Better positioning for Phase 2 to LAX regardless of Santa Monica Airport outcomes
Locating Phase 1 at Bundy and Expo sets up Phase 2 to LAX in a way that is both more flexible and more resilient to future land use decisions. From this geometry, a southward extension can reach the Santa Monica Airport site no matter the ultimate redevelopment outcome, while also preserving optionality for alignments that continue toward Centinela or Sepulveda. This avoids locking the system into a suboptimal geometry that would require costly or operationally constrained workarounds later.

3. Construction and delivery advantages
As documented in the DEIR record, alternatives that leverage the Santa Monica Airport area and the Bundy corridor offer meaningful construction advantages. These include reduced displacement, fewer impacts to established commercial centers, more straightforward truck access, and improved opportunities for staging and tunnel boring operations. A Bundy based

terminus aligns with a realistic construction timeline and lowers delivery risk for a project of this scale.

4. The importance of the Barrington and Santa Monica station
With an Expo/Bundy terminus, the project could also include a Barrington/Santa Monica station. Ensuring strong service at the Barrington and Santa Monica station is essential. This station serves the most dense ten minute walkshed on the Westside, anchoring access to dense residential neighborhoods, major job centers, and key east west bus corridors. It plays a critical role in making the Sepulveda line useful for everyday trips, not just peak or end to end travel. The Bundy and Expo configuration strengthens this center of activity and better integrates it into the regional rail network.

5. A once in a generation opportunity to get the basics right
The Sepulveda Transit Corridor is one of the most consequential transit investments Metro will make this century. Advancing Modified Alternative 5 while studying, and ultimately selecting, a Bundy and Expo Phase 1 terminus reflects a commitment to delivery, connectivity, and long term value. It is a choice that improves outcomes for riders today while ensuring that future expansions to LAX and beyond are faster, more cost effective, and more achievable.

Thank you for your leadership and for the opportunity to comment. We urge the Board to move forward with Modified Alternative 5 and to study a Bundy/Expo terminus.

Sincerely,

Eli Gill

Los Angeles, CA 90012

Los Angeles Metro Board of Directors
RE: **Agenda Item Number 10**
Position: **FOR**

Dear LA Metro Board of Directors,

On behalf of the Undergraduate Students Association Council at the University of California, Los Angeles, **we implore the Metro Board of Directors to follow the recommendation of Metro staff to select Modified Alternative 5** as the Locally Preferred Alternative (LPA) for the Sepulveda Transit Corridor project to ensure transportation equity for students at UCLA.

We are pleased with the major components of Modified Alternative 5, including:

- A direct, on-campus station at UCLA Gateway Plaza, unlike Alternative 1
- Direct connections to other Metro lines, unlike Alternatives 1 and 3
- Stations placed where students actually go, unlike Alternatives 1 and 3
- Low headways thanks to the use of automated heavy rail technology, similar to Alternatives 4 and 5, and unlike Alternative 6

We represent over 33,000 UCLA undergraduates, many of whom use public transportation to get to class, work, home, or anywhere else in Los Angeles. The Sepulveda Transit Corridor project presents future opportunities for our students. Having a direct stop on UCLA campus would make public transportation significantly easier and faster for the students who rely on it. Additionally, many of our students commute from their homes in the San Fernando Valley, and traveling through the extremely congested Sepulveda Pass via the 405 freeway or existing bus lines poses extreme delays and challenges for commuter students.

We wish to strongly reiterate that monorail alternatives 1 and 3 are insufficient to address student needs. Alternative 1 omits a UCLA campus stop entirely, instead requiring students to travel between campus and the stop on an electric bus, which would significantly increase travel time and decrease ridership, as supported by data in the DEIR. And both alternatives 1 and 3 see slower travel times, with stops located directly adjacent to the 405 freeway, exposing riders to dangerous levels of noise and air pollution. Simultaneously, these stops place riders farther from dense areas and popular destinations like Westwood Village, UCLA campus, and Sherman Oaks.

While we still believe that elevated rail, as described in Alternative 4, should be considered due to its similar mobility benefits for significantly lower costs, we are encouraged to hear that Metro's modification of Alternative 5 may lead to lower costs versus Alternative 5 as described in the DEIR. We hope that Metro expedites the final environmental review of this project to ensure this critical backbone can be built faster and start serving the needs of students sooner.

Our student government has sent representatives to every Metro Scoping Event, Community Meeting, and Public Hearing on the Sepulveda Transit Corridor over the past several years, and we have been deeply invested in ensuring students' voices are heard every step of the way. We remain committed to advocating for the most equitable outcome of this project for the UCLA undergraduates we represent. To this end, we call on the Metro Board of Directors to honor UCLA's commitment to the Los Angeles region by selecting an alternative that will connect the nation's number one public university to its rapidly expanding transportation network. We firmly believe that moving forward with Modified Alternative 5 is the only decision that will uphold Metro's values of equity and world-class transportation.

Sincerely,

The Undergraduate Students Association Council of the University of California, Los Angeles

Re: Opposition to Adoption of Modified Alternative 5 – Sepulveda Transit Corridor Project

Dear Chair and Members of the Metro Board of Directors:

I am writing as a resident of the Santa Monica Mountains hillside community. I respectfully urge the Board **not to adopt Modified Alternative 5** as the Locally Preferred Alternative (LPA) at this time. The alternative advanced by the Planning & Programming Committee on January 14, 2026, raises significant unresolved CEQA, safety, and procedural concerns that require further study before any responsible agency action can be taken.

1. Modified Alternative 5 was not disclosed or analyzed in the Draft EIR.
Modified Alternative 5 poses a new alignment along Beverly Glen Boulevard that affects our community, but neither the DEIR nor public discourse made us aware of this new alternative. CEQA requires that an agency circulate for public review any new alternative that differs substantially from those analyzed in the Draft EIR and that may cause new or more severe impacts. Modified Alternative 5 introduces materially different alignments, tunneling depths, and portal locations that were never subject to public notice, technical review, or comment. Adoption of an undisclosed alternative at the LPA stage would undermine the integrity of the CEQA process and expose Metro to avoidable legal risk. which is causing were not made aware of this alignment during the public co

2. The geotechnical and seismic analysis remains incomplete.
The Santa Monica Mountains contain complex faulting, landslide zones, and highly variable geology. The Draft EIR acknowledges data gaps and the need for additional borings and slope stability analysis. Modified Alternative 5 increases tunneling under steep, fireprone terrain without providing the necessary geotechnical substantiation. Selecting an LPA without this information is premature and inconsistent with CEQA's requirement for informed decisionmaking.

3. Wildfire evacuation and emergency access impacts are inadequately addressed.

The hillside communities along the alignment—including Bel Air, Beverly Glen, and surrounding neighborhoods—depend on a limited number of evacuation routes. The Draft EIR does not evaluate how construction closures, haul routes, or portal operations would affect evacuation times during a wildfire or seismic emergency. Modified Alternative 5 intensifies these risks by adding construction activity in constrained canyons without providing mitigation or alternatives analysis.

4. A recirculated Draft EIR is necessary before selecting an LPA.
Given the introduction of a new alternative, the incompletetechnical studies, and the potential for new significant impacts, Metro should direct staff to **recirculate the Draft EIR** with a complete alternatives analysis and updated technical sections. This approach strengthens the project, improves public trust, and reduces litigation exposure.

5. A more balanced and publicly vetted alternative remains achievable.
Metro has the opportunity to advance an alternative that meets mobility goals while respecting the environmental constraints of the Santa Monica Mountains and the safety needs of hillside communities. A recirculated EIR would allow for a fair comparison of feasible alternatives, including those with lower geotechnical and evacuation risks. Please revisit an alternative that would run along or underneath the 405 Freeway.

I support the effort to create a public transit between the San Fernando Valley and the Westside. However, due to these reasons, I respectfully request that the Board **decline to adoptModified Alternative 5** and instead direct staff to complete the necessary studies and recirculate the Draft EIR. This is the most responsible path forward for both the region and the communities directly affected by this project.

Thank you for your consideration and for your service to Los Angeles County.

Sincerely,

Karine Barseghyan,

Hello Metro Board,

I urge you to vote in favor of the Sepulveda Modified Alt 5 and Torrance Hybrid ROW options as the LPA for either project. I have friends in the Valley and the Sepulveda line would be transformative in being able to connect two previously hard-to-reach areas (without a car). I also hope that the current hybrid alignment for the K Line to Torrance will be approved. Having the South Bay connected to the rest of LA's rail network (AS SOON AS POSSIBLE) would be such a no-brainer economic boon and allow people more options on where to work and live. Accepting the plan along Hawthorne would be much more expensive for little benefit, and is something I would not want to see my tax dollars spent towards (for more studies, EQAs, and loads of mitigations). Unlike other projects, there is funding and a concrete plan for the Hybrid ROW to Torrance, and I urge the Metro Board to capitalize on this.

Lastly, I hope you reconsider the measure to oppose SB 79. There is already an acute housing shortage in LA and any attempt to water down housing density provisions would only exacerbate this issue. I grew up in LA and love this city, and I want to keep living in this city, but the cost of housing and living make it difficult to be able to stay; I know I am not alone in this sentiment. With local governments historically doing little in the way of building enough housing units, let alone affordable ones, I think reverting back from state to local control over zoning is a massive mistake that would only serve to hinder your objectives of expanding your ridership base and providing high quality transit services for everyone in the Greater LA area by driving people away from your service area.

In conclusion, I want to remind the Metro Board of who you serve. Los Angeles is the second largest city in the US, not some quaint suburb that some people try to vocally say otherwise. In terms of public transit infrastructure and ridership, LA embarrassingly falls behind other "global" American cities, such as New York, Chicago, San Francisco, and D.C.. Building as much transit infrastructure as possible, and getting people to use that infrastructure, should be your main goals if you are to provide world class transit. Therefore, by advancing the current plans for our rail expansions and retaining the commitment to upzoning transit corridors is of utmost priority in my opinion to be able to achieve those goals.

Thanks,
Aaron

CITIZENS COALITION
LOS ANGELES
CCLA

January 21, 2026
Before 5:00 PM

TO: Los Angeles County Metropolitan Transportation Authority (METRO) Board of Directors

VIA EMAIL: BoardClerk@metro.net

CC: LA County Counsel; Individual Metro Board Members (See Distribution List Below)

RE: FORMAL OBJECTION – Metro Board Meeting Scheduled for January 22, 2026; **Agenda Item 10:** Sepulveda Transit Corridor Project

SUBJECT: Prejudicial Abuse of Discretion; Fatal Procedural Deficiencies and Project Management Failure Regarding "Modified Alternative 5"

To the Metro Board of Directors and the Clerk of the Board:

The Citizen's Coalition Los Angeles (CCLA) formally submits this objection to the proposed selection of "Modified Alternative 5" as the Locally Preferred Alternative (LPA). CCLA has a long-standing history of ensuring governmental transparency and CEQA compliance in the City of Los Angeles, most notably through our active participation in the Hollywood Community Plan and various high-profile land-use challenges.

CCLA members have been diligent participants throughout this project's lifecycle, attending outreach meetings and submitting comprehensive technical comments during both the Notice of Preparation (NOP) and Draft Environmental Impact Report (DEIR) periods. We are writing to state that the current move to approve a Modified alternative without recirculation is a flagrant violation of the law.

I. LEGAL OBJECTION: FAILURE TO RECIRCULATE (CEQA GUIDELINES § 15088.5)

The introduction of Modified Alternative 5 after the close of the DEIR comment period constitutes significant new information that requires mandatory recirculation.

Under CEQA Guidelines § 15088.5, recirculation is required when a considerably different alternative is disclosed. By shifting the alignment from Sepulveda Blvd to Van Nuys Blvd—a geographically distinct transit corridor with unique environmental, utility, and noise profiles—Metro has introduced a project that the public has had zero opportunity to review. As held in *Sutter Sensible Planning, Inc. v. County of Sutter* (1981), when an agency makes significant changes post-DEIR, it must recirculate to satisfy the informational role of CEQA.

II. LEGAL OBJECTION: LACK OF A STABLE PROJECT DESCRIPTION

In *Vineyard Area Citizens for Responsible Growth, Inc. v. City of Rancho Cordova* (2007), the California Supreme Court held that an EIR must contain a "stable, finite, and fixed" project description. Metro's sudden pivot to a hybrid alignment that merges elements of multiple alternatives creates an unstable project description. This moving target prevents the public from assessing the true environmental trade-offs, rendering the current record legally fatal.

III. DOCTRINE OF SELF-IMPOSED EMERGENCY & PROJECT MANAGEMENT FAILURE

Metro staff may argue that a Modified LPA must be selected immediately to maintain momentum. However, a lack of planning on the part of the agency does not constitute an emergency on the part of the public. As documented below,

Metro has missed nearly every major milestone for this project, resulting in a 31-month delay for the DEIR alone.

TABLE: METRO SELF-IMPOSED PROJECT DELAYS

Milestone	Original Target Date	Actual/Current Date	Total Delay
Draft EIR (DEIR) Release	Late 2022	June 2025	**31 Months**
Scoping Report Release	Spring 2022	Late 2024	**30 Months**
LPA Selection Vote	Early 2024	January 2026	**24 Months**
Final EIR Certification	2024	2027 (Projected)	**36 Months**

Metro's internal mismanagement cannot be used as a legal justification to truncate the public's right to review a fundamentally altered project. To bypass recirculation now is to punish the public for Metro's administrative failures.

IV. CONCLUSION AND REQUEST FOR CORRECTION

The core purpose of CEQA is to provide the public with a "meaningful opportunity to comment" (*Laurel Heights Improvement Assn. v. Regents of University of California* (1988)). By introducing Modified Alternative 5 post-comment closure, Metro has effectively silenced the 15,000+ stakeholders who participated in good faith.

CCLA formally requests that the Metro Board vacate the current recommendation for Item 10 and order staff to recirculate a Revised DEIR. Failure to do so constitutes a prejudicial abuse of discretion and will necessitate immediate legal remedy.

Dear Chair Dutra and members of the board:

The Transit Coalition is a Volunteer Transit Advocacy Group started in 2002.

Agenda item #10 (2025-1062, Sepulveda corridor):

The Coalition supports the staff-recommended Locally Preferred Alternative (Modified 5), unanimously approved by the Planning Committee on 1/14/2026. It is the alternative with the highest benefit-to-cost ratio, and will best serve the future transit needs of Los Angeles.

Agenda item #11 (2025-0818, C line extension):

The Coalition supports approval and FEIR certification of the staff-recommended Locally Preferred Alternative (LPA), which travels along the Metro-owned Right-of-Way (ROW). We commend Metro for measures such as walking paths, landscaping, sound walls, freight improvements, and grade separations for safety, noise reduction and enhancing pedestrian and bicycle mobility.

This is a critical project to enhance mobility in the South Bay, and to allow direct rail transit connectivity in the future between Long Beach, the South Bay and LAX areas. The Hawthorne Option is far costlier and more difficult to construct, for negligible enhanced benefit compared to the LPA.

The Transit Coalition

General Comment on Agenda Item 10: Sepulveda Transit Corridor Project

Thursday, 1/22/2026: Metro Regular Board Meeting

Dear Metro Board Members,

In my capacity as Senior Executive Director of Government and Community Relations, I am submitting these general comments on behalf of UCLA.

UCLA appreciates the numerous opportunities to weigh in over the last several years on the Sepulveda Transit Corridor - a regionally significant project.

We also want to thank Metro staff for their diligent work in getting us to this important project milestone.

As the only public research university in L.A. and the third largest employer in L.A. County, UCLA needs reliable, inclusive, and efficient public rail transit.

UCLA is pleased to see the proposed Locally Preferred Alternative (LPA) directly serves the UCLA campus, prioritizes high ridership and fast travel times, and includes seamless connections to other transit lines, such as the D Line.

As we outlined in our DEIR comment letter submitted in August 2025,

UCLA has several concerns associated with construction and operations that need to be resolved before we can fully endorse the LPA recommendation.

UCLA looks forward to working closely with Metro staff to mitigate campus disruptions from this project.

Thank you.

Sincerely,
Duane Muller

Dear Metro Board:

I support Item 11 and oppose the last minute attempt (Item 11.1) to derail the C Line Extension to Torrance by caving to NIMBY pressure. Metro already owns the ROW, and we should not delay the project by years and spend an extra $700M to get worse ridership! Please support staff's recommendation, and vote no on 11.1.

I support Item 10 - please support staff's recommendation on the Modified Alternative 5 route for the Sepulveda Transit Corridor.

I oppose Item 33 - SB-79 is law in California, and it makes Metro look absurd to ask for an exemption for L.A. County. In fact, if Metro embraced SB-79 and more housing was built around Metro stops, it would lead to higher ridership of the system.

Thank you,
Luis R Garcia Chavez
Long Beach 90802

Dear Metro Board:

I support Item 11 and oppose the last minute attempt (Item 11.1) to derail the C Line Extension to Torrance by caving to NIMBY pressure. Metro already owns the ROW, and we should not delay the project by years and spend an extra $700M to get worse ridership! Please support staff's recommendation, and vote no on 11.1.

I support Item 10 - please support staff's recommendation on the Modified Alternative 5 route for the Sepulveda Transit Corridor.

I oppose Item 33 - SB-79 is law in California, and it makes Metro look absurd to ask for an exemption for L.A. County. If Metro embraced SB-79 and more housing was built around Metro stops, it would lead to higher ridership of the system. Furthermore, if Metro tried to get an exemption, it would undoubtedly lead to litigation, which the taxpayers will pay for.

We need a Metro Board that makes hard decisions that serves LA County as a whole and and not wilt to the whims of a small albeit loud cohort of NIMBYs.

Thank you,
John Trang

Dear Metro Board,

I support Item 10 - please support Metro staff's recommendation on the Modified Alternative 5 route for the Sepulveda Transit Corridor. As a physician working at UCLA Health in Westwood, this project would have a direct positive impact on my ability to use Metro rail transit to get to work, would provide additional high-speed, high-reliability options to all of UCLA Health's staff, and **most importantly would make our offices and hospital more accessible to patients from downtown (via the D line extension), to the west side, to the valley.**

I support Item 11 and oppose the last minute attempt (Item 11.1) to derail the C Line Extension to Torrance by caving to NIMBY pressure. Metro already owns the ROW, and we should not delay the project by years and spend an extra $700M to get worse ridership! Please support staff's recommendation, and vote no on 11.1.

I oppose Item 33 - SB-79 is law in California, and it makes Metro look absurd to ask for an exemption for L.A. County. In fact, if Metro embraced SB-79 and more housing was built around Metro stops, it would lead to higher ridership of the system.

I live right by the Expo/Sepulveda Station, so SB-79 would have a huge impact on where I live and I FULLY support the changes it will bring. My life has changed and benefited immensely from living near a Metro station. I want as many people as possible to benefit from all the good living near a Metro station can bring them.

SB-79 makes that possible.

Dear Metro Board:

I support Item 11 and oppose the last minute attempt (Item 11.1) to derail the C Line Extension to Torrance by caving to NIMBY pressure. Metro already owns the ROW, and we should not delay the project by years and spend an extra $700M to get worse ridership! Please support staff's recommendation, and vote no on 11.1.

I support Item 10 - please support staff's recommendation on the Modified Alternative 5 route for the Sepulveda Transit Corridor. This is a great project and if there are opportunities to speed this up (and the K-line Northern Extension) we should absolutely pursue them. I also look forward to seeing more automatic trains with world-class runtimes added throughout the Metro system.

I oppose Item 33 - SB-79 is law in California, and it makes Metro look absurd to ask for an exemption for L.A. County. In fact, if Metro embraced SB-79 and more housing was built around Metro stops, it would lead to higher ridership of the system. Los Angeles is facing a historic, self-inflicted housing crisis that is particularly affecting young families and homeowners like me. Opposing SB-79 is irresponsible, backwards, and embarrassing. We need more dense housing around transit, and Metro of all organizations should support that goal.

Dear Metro Board:

I support Item 11 and oppose the last minute attempt (Item 11.1) to derail the C Line Extension to Torrance by caving to NIMBY pressure. Metro already owns the ROW, and we should not delay the project by years and spend an extra $700M to get worse ridership! Please support staff's recommendation, and vote no on 11.1.

I support Item 10 - please support staff's recommendation on the Modified Alternative 5 route for the Sepulveda Transit Corridor. Alternative 5 will be extremely important for commuters getting from the valley to the westside and those working at UCLA, one of the largest employers in LA county.

I oppose Item 33 - SB-79 is law in California, and it makes Metro look absurd to ask for an exemption for L.A. County. In fact, if Metro embraced SB-79 and more housing was built around Metro stops, it would lead to higher ridership of the system. Metro has a lot to gain from SB-79, both on current existing transit lines and future lines. Letting the fear of dense housing near transit stations dictate decisions is a losing strategy, please follow SB-79.

Thank you,
Brandon Taraku

Dear Metro Board:

I support Item 11 and oppose the last minute attempt (Item 11.1) to derail the C Line Extension to Torrance by caving to NIMBYs, the majority of whom have not read the report. Metro already owns the ROW, and we should not delay the project by years and spend an extra $700M to get worse ridership! Please support staff's recommendation, and vote no on 11.1.

I support Item 11. The LPA is a good compromise between local interests and transit rider interests. It gets us what we need in a not unreasonable amount of time and for significantly lower cost.

I support Item 10 - please support staff's recommendation on the Modified Alternative 5 route for the Sepulveda Transit Corridor. The automated heavy rail technology in this proposal has the potential to cause a modal shift in the region, getting a significant number of people out of their cars and greatly reducing traffic on the 405. We need this project to tie the region together.

I oppose Item 33. I campaigned in support of SB-79. I find it appalling that the metro board has decided to act with cowardice on this issue. Metro claims to be already building housing - plans are for 10,000 units. This is comically low. We need at least 100,000 or 1,000,000 units in Metro's jurisdiction to address the crushing housing affordability crisis we face in LA county. SB-79 empowers state and county officials to make those sweeping, necessary changes. Metro staff are concerned that SB-79 interferes with, or in some cases destroys, local partnerships that Metro builds to get transit projects done. This is a valid concern, but I think Metro board members fail to grasp that new partnerships can be forged; such as with community groups who support transit AND housing.

Instead of looking to the future, board members seem fixated on the past in this case; past community groups and past supporters. In dark times such as these, given the reckless actions of the current presidential administration, courage can be hard to find. But courage is like a muscle; the more you use it, the stronger it gets. This is one such time to exercise courage, courage for a brighter future where LA county does not face a housing affordability crisis, where Metro has increased political will for projects from other community groups like Streets for All, and where we can realize the promise of a brighter future for all Angelinos.

For these reasons, I hope the board decides to reject Item 33 - for a potential brighter future for

all Angelinos.

Thank you,
Nathan Schilling

Dear Metro Chair Dutra and Esteemed Members of the Board,

I support Agenda Item 11 and oppose Agenda Item 11.1. Metro owns the Right of Way (ROW) on the Locally Preferred Alternative (LPA) under the Agenda Item 11. The Hawthorne option under Agenda Item 11.1 leads to delays and at least an extra $700 million for the same ridership. I urge the L.A. Metro Board to support the staff recommendation, Agenda Item 11 and oppose Agenda Item 11.1.

I support Agenda Item 10 with changes to Modified Alternative 5 as the Locally Preferred Alternative (LPA). I advocate for a stop on Sherman Way as planned on Alternative 5 and an expansion of the Initial Operating Segment (IOS) to the Expo/Sepulveda E Line stop.

Sincerely,
Kevin Dedicatoria

Dear Metro Board Clerk,

I live in Hollywood, and I commuted to my work in Burbank, and then in Glendale, for many years using a combination of MTA buses and rail. My employer, the Walt Disney Company, provided an incentive program for using public transportation to commute to and from work. Public transportation in Los Angeles, while far from perfect, worked for me and provided an alternative to the stress and pollution caused by driving my car in LA traffic.

Public Transportation is viable and increasingly attractive in Los Angeles, facilitating reduced travel times, reduced environmental impact, and reduced traffic congestion.

I am in support of the Sepulveda Transit Corridor and the Modified Alternative 5 recommended by the Metro Board.

Sincerely,

Joel Wallerius

Hello Metro Board,

For item # 2025-1062, though I was and still am in favor of Alt 4, if that is not an option I am For the proposal in order to support high quality, high capacity transit between the valley and the Westside.

For item # 2025-0818, I am For it as well in order to further expand transit to the South Bay and set the stage to expand the line to Long Beach.

For item # 2026-0037, I am Against it, as the Hawthorne option will likely come with so many construction difficulties that it will potentially jeopardize the project.

For item # 2025-0985, I am For it, in order to further support the financing of Measure M programs.

For item # 2026-0035 I am For this proposal as well, as reforming the LA Metro Board to better reflect the Counties overall transit needs as opposed to the concerns of a few NIMBY's is a must.

For item # 2025-1028, I am For this proposal as well, in order to ensure Phase 2B2 of the A Line Extension to Montclair is achieved.

For item # 2025-1081, I am For this proposal as it will expand access and public participation in transit governance in critical and necessary ways.

For item # 2025-1033, I am For the proposal in order to ensure a diversity high quality transit information and travel systems for the benefit of riders.

For item # 2025-1053, I am Against the measure, as the measure is a futile attempt at avoiding necessary housing improvement the City's and County desperately need.

Thank you so much.

Los Angeles County Metropolitan Transportation Authority One Gateway Plaza Los Angeles, CA 90012
Dear Chair and Members of the Metro Board of Directors:
I am writing as a long time resident of the Santa Monica Mountains hillside community. I respectfully urge the Board not to adopt Modified Alternative 5 as the Locally Preferred Alternative (LPA) at this time. The alternative advanced by the Planning & Programming Committee on January 14, 2026, raises significant unresolved CEQA, safety, and procedural concerns that require further study before any responsible agency action can be taken.
1. Modified Alternative 5 was not disclosed or analyzed in the Draft EIR. Modified Alternative 5 poses a new alignment along Beverly Glen Boulevard that affects our community, but neither the DEIR nor public discourse made us aware of this new alternative. CEQA requires that an agency circulate for public review any new alternative that differs substantially from those analyzed in the Draft EIR and that may cause new or more severe impacts. Modified Alternative 5 introduces materially different alignments, tunneling depths, and portal locations that were never subject to public notice, technical review, or comment. Adoption of an undisclosed alternative at the LPA stage would undermine the integrity of the CEQA process and expose Metro to avoidable legal risk. which is causing were not made aware of this alignment during the public co
2. The geotechnical and seismic analysis remains incomplete. The Santa Monica Mountains contain complex faulting, landslide zones, and highly variable geology. The Draft EIR acknowledges data gaps and the need for additional borings and slope stability analysis. Modified Alternative 5 increases tunneling under steep, fire-prone terrain without providing the necessary geotechnical substantiation. Selecting an LPA without this information is premature and inconsistent with CEQA's requirement for informed decision-making.
3. Wildfire evacuation and emergency access impacts are inadequately addressed. The hillside communities along the alignment—including Bel Air, Beverly Glen, and surrounding neighborhoods—depend on a limited number of evacuation routes. The Draft EIR does not evaluate how construction closures, haul routes, or portal operations would affect evacuation times during a wildfire or seismic emergency. Modified Alternative 5 intensifies these risks by adding construction activity in constrained canyons without providing mitigation or alternatives analysis.
4. A recirculated Draft EIR is necessary before selecting an LPA. Given the introduction of a new alternative, the incomplete technical studies, and the potential for new significant impacts, Metro should direct staff to recirculate the Draft EIR with a complete alternatives analysis and updated technical sections. This approach strengthens the project, improves public trust, and reduces litigation exposure.
5. A more balanced and publicly vetted alternative remains achievable. Metro has the

opportunity to advance an alternative that meets mobility goals while respecting the environmental constraints of the Santa Monica Mountains and the safety needs of hillside communities. A recirculated EIR would allow for a fair comparison of feasible alternatives, including those with lower geotechnical and evacuation risks. Please revisit an alternative that would run along or underneath the 405 Freeway.

I support the effort to create a public transit between the San Fernando Valley and the Westside. However, due to these reasons, I respectfully request that the Board decline to adopt Modified Alternative 5 and instead direct staff to complete the necessary studies and recirculate the Draft EIR. This is the most responsible path forward for both the region and the communities directly affected by this project.

Thank you for your consideration and for your service to Los Angeles County.

Sincerely,

--

Re: Opposition to Adoption of Modified Alternative 5 – Sepulveda Transit Corridor Project

Dear Chair and Members of the Metro Board of Directors:

I am writing as a long-time resident of the Santa Monica Mountains hillside community. I respectfully urge the Board **not to adopt Modified Alternative 5** as the Locally Preferred Alternative (LPA) at this time. The alternative advanced by the Planning & Programming Committee on January 14, 2026, raises significant unresolved CEQA, safety, and procedural concerns that require further study before any responsible agency action can be taken.

1. Modified Alternative 5 was not disclosed or analyzed in the Draft EIR.
Modified Alternative 5 poses a new alignment along Beverly Glen Boulevard that affects our community, but neither the DEIR nor public discourse made us aware of this new alternative. CEQA requires that an agency circulate for public review any new alternative that differs substantially from those analyzed in the Draft EIR and that may cause new or more severe impacts. Modified Alternative 5 introduces materially different alignments, tunneling depths, and portal locations that were never subject to public notice, technical review, or comment. Adoption of an undisclosed alternative at the LPA stage would undermine the integrity of the CEQA process and expose Metro to avoidable legal risk. which is causing were not made aware of this alignment during the public co

2. The geotechnical and seismic analysis remains incomplete.
The Santa Monica Mountains contain complex faulting, landslide zones, and highly variable geology. The Draft EIR acknowledges data gaps and the need for additional borings and slope stability analysis. Modified Alternative 5 increases tunneling under steep, fire-prone terrain without providing the necessary geotechnical substantiation. Selecting an LPA without this information is premature and inconsistent with CEQA's requirement for informed decision-making.

3. Wildfire evacuation and emergency access impacts are inadequately addressed.
The hillside communities along the alignment—including Bel Air, Beverly Glen, and surrounding neighborhoods—depend on a limited number of evacuation routes. The Draft EIR does not evaluate how construction closures, haul routes, or portal operations would affect evacuation times during a wildfire or seismic emergency. Modified Alternative 5 intensifies

these risks by adding construction activity in constrained canyons without providing mitigation or alternatives analysis.

4. A recirculated Draft EIR is necessary before selecting an LPA.
Given the introduction of a new alternative, the incomplete technical studies, and the potential for new significant impacts, Metro should direct staff to **recirculate the Draft EIR** with a complete alternatives analysis and updated technical sections. This approach strengthens the project, improves public trust, and reduces litigation exposure.

5. A more balanced and publicly vetted alternative remains achievable.
Metro has the opportunity to advance an alternative that meets mobility goals while respecting the environmental constraints of the Santa Monica Mountains and the safety needs of hillside communities. A recirculated EIR would allow for a fair comparison of feasible alternatives, including those with lower geotechnical and evacuation risks. *Please revisit an alternative that would run along or underneath the 405 Freeway.*

I support the effort to create a public transit between the San Fernando Valley and the Westside. However, due to these reasons, I respectfully request that the Board **decline to adopt Modified Alternative 5** and instead direct staff to complete the necessary studies and recirculate the Draft EIR. This is the most responsible path forward for both the region and the communities directly affected by this project.

Thank you for your consideration and for your service to Los Angeles County.

Sincerely,
Virginia Castle

Resident of the Beverly Glen Mountains.

Re: Opposition to Adoption of Modified Alternative 5 – Sepulveda Transit Corridor Project

Dear Chair and Members of the Metro Board of Directors:

I am writing as a longtime resident of the Santa Monica Mountains hillside community. I respectfully urge the Board **not to adopt Modified Alternative 5** as the Locally Preferred Alternative (LPA) at this time. The alternative advanced by the Planning & Programming Committee on January 14, 2026, raises significant unresolved CEQA, safety, and procedural concerns that require further study before any responsible agency action can be taken.

1. Modified Alternative 5 was not disclosed or analyzed in the Draft EIR.
Modified Alternative 5 poses a new alignment along Beverly Glen Boulevard that affects our community, but neither the DEIR nor public discourse made us aware of this new alternative. CEQA requires that an agency circulate for public review any new alternative that differs substantially from those analyzed in the Draft EIR and that may cause new or more severe impacts. Modified Alternative 5 introduces materially different alignments, tunneling depths, and portal locations that were never subject to public notice, technical review, or comment. Adoption of an undisclosed alternative at the LPA stage would undermine the integrity of the CEQA process and expose Metro to avoidable legal risk. which is causing were not made aware of this alignment during the public co

2. The geotechnical and seismic analysis remains incomplete.
The Santa Monica Mountains contain complex faulting, landslide zones, and highly variable geology. The Draft EIR acknowledges data gaps and the need for additional borings and slope stability analysis. Modified Alternative 5 increases tunneling under steep, fireprone terrain without providing the necessary geotechnical substantiation. Selecting an LPA without this information is premature and inconsistent with CEQA's requirement for informed decisionmaking.

3. Wildfire evacuation and emergency access impacts are inadequately addressed.

The hillside communities along the alignment—including Bel Air, Beverly Glen, and surrounding neighborhoods—depend on a limited number of evacuation routes. The Draft EIR does not evaluate how construction closures, haul routes, or portal operations would affect evacuation times during a wildfire or seismic emergency. Modified Alternative 5 intensifies these risks by adding construction activity in constrained canyons without providing mitigation or alternatives analysis.

4. A recirculated Draft EIR is necessary before selecting an LPA.
Given the introduction of a new alternative, the incompletetechnical studies, and the potential for new significant impacts, Metro should direct staff to **recirculate the Draft EIR** with a complete alternatives analysis and updated technical sections. This approach strengthens the project, improves public trust, and reduces litigation exposure.

5. A more balanced and publicly vetted alternative remains achievable.
Metro has the opportunity to advance an alternative that meets mobility goals while respecting the environmental constraints of the Santa Monica Mountains and the safety needs of hillside communities. A recirculated EIR would allow for a fair comparison of feasible alternatives, including those with lower geotechnical and evacuation risks. Please revisit an alternative that would run along or underneath the 405 Freeway.

I support the effort to create a public transit between the San Fernando Valley and the Westside. However, due to these reasons, I respectfully request that the Board **decline to adoptModified Alternative 5** and instead direct staff to complete the necessary studies and recirculate the Draft EIR. This is the most responsible path forward for both the region and the communities directly affected by this project.

Thank you for your consideration and for your service to Los Angeles County.

Sincerely,

Sabrina Hovsepian

Re: Opposition to Adoption of Modified Alternative 5 – Sepulveda Transit Corridor Project

Dear Chair and Members of the Metro Board of Directors:

I am writing as a long-time resident of the Santa Monica Mountains hillside community. I support the goals of the Sepulveda Transit Corredor Project but I respectfully urge the Board **not to adopt Modified Alternative 5** as the Locally Preferred Alternative (LPA) at this time. The alternative advanced by the Planning & Programming Committee on January 14, 2026, raises significant unresolved CEQA, safety, and procedural concerns that require further study before any responsible agency action can be taken. The public, and especially affected communities, need full information on Metro plans and alternatives and clear reasons for their decision-making.

1. Modified Alternative 5 was not disclosed or analyzed in the Draft EIR.
Modified Alternative 5 poses a new alignment along Beverly Glen Boulevard that affects our community, but neither the DEIR nor public discourse made us aware of this new alternative. CEQA requires that an agency circulate for public review any new alternative that differs substantially from those analyzed in the Draft EIR and that may cause new or more severe impacts. Modified Alternative 5 introduces materially different alignments, tunneling depths, and portal locations that were never subject to public notice, technical review, or comment. Adoption of an undisclosed alternative at the LPA stage would undermine the integrity of the CEQA process and expose Metro to avoidable legal risk.

2. The geotechnical and seismic analysis remains incomplete.
The Santa Monica Mountains contain complex faulting, landslide zones, and highly variable geology. The Draft EIR acknowledges data gaps and the need for additional borings and slope stability analysis. Modified Alternative 5 increases tunneling under steep, fire-prone terrain without providing the necessary geotechnical substantiation. Selecting an LPA without this information is premature and inconsistent with CEQA's requirement for informed decision-making.

3. Wildfire evacuation and emergency access impacts are inadequately addressed.
The hillside communities along the alignment—including Bel Air, Beverly Glen, and surrounding neighborhoods—depend on a limited number of evacuation routes. The Draft EIR

does not evaluate how construction closures, haul routes, or portal operations would affect evacuation times during a wildfire or seismic emergency. Modified Alternative 5 intensifies these risks by adding construction activity in constrained canyons without providing mitigation or alternatives analysis.

4. A recirculated Draft EIR is necessary before selecting an LPA.
Given the introduction of a new alternative, the incomplete technical studies, and the potential for new significant impacts, Metro should direct staff to **recirculate the Draft EIR** with a complete alternatives analysis and updated technical sections. This approach strengthens the project, improves public trust, and reduces litigation exposure.

5. A more balanced and publicly vetted alternative remains achievable.
Metro has the opportunity to advance an alternative that meets mobility goals while respecting the environmental constraints of the Santa Monica Mountains and the safety needs of hillside communities. A recirculated EIR would allow for a fair comparison of feasible alternatives, including those with lower geotechnical and evacuation risks. *Please revisit an alternative that would run along or underneath the 405 Freeway.*

I support the effort to create a public transit between the San Fernando Valley and the Westside. However, due to these reasons, I respectfully request that the Board **decline to adopt Modified Alternative 5** and instead direct staff to complete the necessary studies and recirculate the Draft EIR. This is the most responsible path forward for both the region and the communities directly affected by this project.

Dear Metro Board:

Attached please find a letter from me, a constituent, with regard to the proposed digging/tunneling for a new Metro under Beverly Glen Boulevard South of Mulholland.

I have serious concern this has not been thoroughly researched nor vetted in a physical or practical manner.

The subterranean tectonic plates pressuring the fault lines could be severely impacted causing seismic waves and earthquakes resulting in unknown scales of damage to both communities as well as people riding the Metro.

Thank you for your attention to this matter.

Sincerely,

Kelly O'Connor

Dear Chair and Members of the Metro Board of Directors:

I am writing as a longtime resident of the Santa Monica Mountains hillside community. I respectfully urge the Board not to adopt Modified Alternative 5 as the Locally Preferred Alternative (LPA) at this time. The alternative advanced by the Planning & Programming Committee on January 14, 2026, raises significant unresolved CEQA, safety, and procedural concerns that require further study before any responsible agency action can be taken.
1. Modified Alternative 5 was not disclosed or analyzed in the Draft EIR.
Modified Alternative 5 poses a new alignment along Beverly Glen Boulevard that affects our community, but neither the DEIR nor public discourse made us aware of this new alternative. CEQA requires that an agency circulate for public review any new alternative that differs substantially from those analyzed in the Draft EIR and that may cause new or more severe impacts. Modified Alternative 5 introduces materially different alignments, tunneling depths, and
portal locations that were never subject to public notice, technical review, or comment. Adoption
of an undisclosed alternative at the LPA stage would undermine the integrity of the CEQA process and expose Metro to avoidable legal risk. which is causing were not made aware of this
alignment during the public co
2. The geotechnical and seismic analysis remains incomplete.
The Santa Monica Mountains contain complex faulting, landslide zones, and highly variable geology. The Draft EIR acknowledges data gaps and the need for additional borings and slope stability analysis. Modified Alternative 5 increases tunneling under steep, fireprone terrain without providing the necessary geotechnical substantiation. Selecting an LPA without this information is premature and inconsistent with CEQA's requirement for informed decisionmaking.
3. Wildfire evacuation and emergency access impacts are inadequately addressed.
The hillside communities along the alignment—including Bel Air, Beverly Glen, and surrounding neighborhoods—depend on a limited number of evacuation routes. The Draft EIR

does not evaluate how construction closures, haul routes, or portal operations would affect evacuation times during a wildfire or seismic emergency. Modified Alternative 5 intensifies these
risks by adding construction activity in constrained canyons without providing mitigation or alternatives analysis.
4. A recirculated Draft EIR is necessary before selecting an LPA.
Given the introduction of a new alternative, the incomplete technical studies, and the potential for new significant impacts, Metro should direct staff to recirculate the Draft EIR with a

complete alternatives analysis and updated technical sections. This approach strengthens the project, improves public trust, and reduces litigation exposure.
5. A more balanced and publicly vetted alternative remains achievable.
Metro has the opportunity to advance an alternative that meets mobility goals while respecting the environmental constraints of the Santa Monica Mountains and the safety needs of hillside communities. A recirculated EIR would allow for a fair comparison of feasible alternatives, including those with lower geotechnical and evacuation risks. Please revisit an alternative that would run along or underneath the 405 Freeway.
I support the effort to create a public transit between the San Fernando Valley and the Westside.
However, due to these reasons, I respectfully request that the Board decline to adopt Modified Alternative 5 and instead direct staff to complete the necessary studies and recirculate the Draft
EIR. This is the most responsible path forward for both the region and the communities directly
affected by this project. We are already living in a very congested commuting area and an EIR needs to be considred for all of the reasons outliend above and impact to the hillsides does not appear to be vetted as best as it should for geotechnical and safety risks to the stability of the hillside.

Thank you for your consideration.

Sincerely,
Gita Amar

DEAR CHAIR AND MEMBERS OF THE METRO ALTERNATIVE 5 - SEPULVEDA TRANSIT CORRIDOR PROJECT.

As a resident of Beverly Glenn I urge the Board not to adopt Modified Alternative 5.

Our commute from Beverly Glenn to the Valley and from Beverly Glenn to UCLA etc. is a nightmare now at commute times etc.

Beverly Glenn is narrow and would be subject to massive delays if this project goes through.

Drilling would be a noise nightmare.

Please reconsider this route .

Thank You.

As the residents in the hills of the area affected, I believe this project is hugely disruptive, but also a financial pit. Has California learned nothing from its high-speed rail pet project? This will not only disrupt our community, but it will probably create a huge deficit for LA City/County. We need to stop doing pharaonic projects that will never provide any difference to commuters. The reality is that Los Angelinos do not use public transit for the most part, and this is not likely to change even with a subway below a mountain. I listened in to when this was presented to the Board of Supervisors. There was virtually no discussion on the actual cost and potential overruns. Likely, no one will be held accountable for the huge cost overage that will occur. I really urge people to have some sense of economic reality. I did not see any double-checking either of the actual numbers and expectations of commuters using this transit corridor. This is not an end-to-end solution. People still have to figure out the last mile. And that still hasn't been debated upon.

I urge the Board of Supervisors to not make the same mistake as the high-speed rail in California. Money pit is really the first thing that comes to mind. Enormous disruption is the second. And finally, very little to show for it by the end since this probably won't change commuters' behaviors at all.

I would like to submit this public comment for the Regular Board Meeting on 1/22/26, for agenda item 10 (Sepulveda Transit Corridor Project).

re: Agenda Item 10, SEPULVEDA TRANSIT CORRIDOR PROJECT.

I am writing in support and FOR a modified Alternative 5: Heavy rail transit underground between the Van Nuys Metrolink Station and the E Line Expo/Sepulveda Station.

I am a resident in the neighborhood close to the SFV portion of this proposed line and I write in FAVOR of this agenda item.

This proposed line would provide very useful and convenient connections to existing Metro lines, allowing for efficient and seamless transfers among Metro transit lines. Our city needs more transit options that get people from one corner to another with connections that are as seamless and simple as possible. Options like this modified Alternative 5, that connect directly to the MetroLink station, G Line, K line, and lie in close proximity to high-ridership destinations (UCLA/Westwood and in the future, LAX) can be transformative for our city. This would be an important step to improve transit in our city that would bring us closer to what other world-class cities offer for non-automobile transportation.

Thank you

Steven Tham

Hi, my name is Miles Bunnell and I am a resident of west LA. I am emailing my public comment in advance of tomorrow's meeting to express my opinion on the Sepulveda Transit Corridor project.

As a student of Santa Monica College I feel that rather than simply accepting Alternative 5 as is, Metro should study an alternative southern station at the Expo/Bundy Station

- Metro should conduct the studies needed to determine if a station at Expo/Sepulveda or a station at Expo/Bundy is the superior end point based upon ridership opportunities (for SMC Students) in both the near and long term.

Extending to the Bundy E Line station has the following benefits:

- Bundy Metro station already has direct access to Bundy campus and Main campus via BBB lines and/ or the Metro E line.

- The college plans to build student and faculty housing at the Bundy campus, further increasing the need for transit options.
- The Bundy stop would bring the Sepulveda Pass route over to the west side of the 405 freeway, which would make it much easier to access for anyone wanting to continue west, since they would be past the perpetual traffic that comes with the on/off ramps at those intersections.
- Having the line stop at Bundy sets up the line to be extended further south in the future, which could benefit all those who will want to visit the Great Park, which will be built on the site of the Santa Monica Airport when it closes at the end of 2028…and then further on to LMU, Playa Vista, Westchester, and LAX.

Thank you,
Miles Bunnell

I am writing this letter to state my opposition to Modified Alternative 5 (Sepulveda Transit Corridor) plan.
I live in the Beverly Glen area and feel that this would be disruptive to the many houses in the area. I also question the safety of this and the impact it will have on our community.

Thank you,
Geetha Rao

> Dear BAR Community,
> For those of you who are concerned about the new Modified Alternative 5 which will run under our community, I am attaching a sample letter to the METRO Board.
> In order for your comments to be distributed to the Board, it must be sent **TODAY BEFORE 5 pm.**
> • Send to: BoardClerk@metro.net
> • Deadline: Before 5:00 PM on Wednesday, January 21, 2026

• Emails received after 5 PM do not go to the full Board.
• Subject line suggestion: “Public Comment – Jan 22 Board Meeting – Modified Alternative 5 (Sepulveda Transit Corridor)”
This method is meant to ensure that your comment is distributed to all Board Members before the vote.

As I wrote to you previously, METRO Planning Committee is very enthusiastic about this option. It is unlikely that our letters will make a difference.
Even though our letters probably will not affect the vote, I think it's beneficial to send them to make a public record of our concerns.
I have heard that Bel Air Association has engaged or is engaging legal counsel. I don't have details.
I have heard that a City spokesman said that the subway will involve surface drilling in the Valley and in Westwood, and all drilling under the hillside will be underground which will minimize impact to our community. However, representatives of Bel Air Assn and of the Bel Air-Beverly Crest Neighborhood Council told me that they have doubts about this. These representatives have been involved with this process for a long time, and they are concerned that that our communities will be affected. I am new to this issue (only learned about it when Dan sent out the notice ~ Jan 9), and I am trying to get up to speed as best I can.

Jill advised me yesterday that BAR Board has decided not to take a position.
Personally, I like the idea of public transit between the Valley and the Westside, but I want our community to be protected.
Thanks for your concerns.
Beth Kase

Good morning,

I would like to express my support for Item 10, specifically selecting Modified Alternative 5 as the Locally Preferred Alternative (LPA) for the Sepulveda Transit Corridor Project. Choosing this alternative will have numerous benefits for the entire L.A. region, and I urge the Board to prioritize the best alternative for one of the most important transportation projects in recent history. Alternative 5 will ensure fast, frequent, reliable transit connecting the Westside and Valley, with automated trains and better connections to the Metro G line, Metro ESFV Project, as well as Metrolink and the Pacific Surfliner.

Additionally, I would like to express my support for the approval of the Hybrid Alignment LPA for Item 11. I urge the board to reject Motion 11.1 by Director Mitchell to advance the Hawthorne Alignment. The Hawthorne alignment is far more expensive, and does not utilize the existing Right-Of-Way that Metro already owns. Selecting the Hybrid Alignment will ensure the South Bay gets the transit it deserves, utilizing existing freight corridors while using state-of-the-art safety technologies. Selecting the Hawthorne Alignment will lead to a large budget deficit and further delay the project with billions of missing funding. Therefore, I urge the Board to approve the Hybrid Alignment and advance the C/K Line Southern Extension.

Thank you for the opportunity to comment.

Agenda Item 10: FOR

Dear Metro Board of Directors,

As an LA resident and non-senate faculty at UCLA, I strongly urge the Metro Board to proceed with Modified Alternative 5 as the Locally Preferred Alternative (LPA) for the Sepulveda Transit Corridor.

Increased accessibility to reliable rapid transit is vital for the economic prosperity of the region. It also benefits my commute and that of countless other LA residents.

Sincerely,
Sean Wang
UCLA Lecturer in Electrical and Computer Engineering

Agenda Item 10: FOR

Dear Metro Board of Directors,

As a UCLA student, I strongly urge the Metro Board to proceed with Modified Alternative 5 as the Locally Preferred Alternative (LPA) for the Sepulveda Transit Corridor.

I am FOR Agenda Item 10: Approve the Locally Preferred Alternative (Modified Alt 5) for the Sepulveda Transit Corridor. This heavy rail option will best serve UCLA students and residents of the San Fernando Valley and West LA!

I support the determination by Metro staff that Modified Alternative 5 is the best alternative to serve the needs of this Corridor. It includes (1) a direct stop at UCLA Gateway Plaza, (2) direct connections to other Metro lines, (3) stations placed where students and residents will go, and (4) frequent trains with low headways. I hope that Metro can expedite the environmental review of the Sepulveda Line to speed up construction, reduce costs, and ensure that we can benefit from this Line as soon as possible.

Thank you for voting to transform public transportation for Los Angeles.

The Sepulveda Transit Corridor would be a great way to expand access to the Valley for UCLA students. It would provide faster access to the Metrolink in the Valley, as well as provide more affordable housing options that students can commute to campus from.

Thank you for voting to transform public transportation for Los Angeles.

To the Metro Board:

I agree with the Metro staff's recommendation of a Modified Alternative 5 for the Sepulveda Transit Corridor.

This option is safe, would allow Angelenos and visitors better access to other parts of our city, is a big improvement for our climate, would reduce time spent driving and increase time with family and community. We need more routes like this to improve Los Angeles.

Thank you for your good work -

This comment is in regards to item 10 of the January 22, 2026 Metro Regular Board Meeting for which I believe the item needs more consideration.

Dear Metro Board:

My name is Benjamin Flores. I am a resident of Sherman Oaks in the San Fernando Valley and a full-time transit user. I do not drive, and have no plans to start doing so anytime soon, so this project would have a substantial positive benefit to me. That said, I come to you today with a few words of caution regarding this staff recommendation. This feels like a decision made to appease the Sherman Oaks Homeowners Association and Neighborhood Council, rather than because this modified alternative is actually what the people want or provides the best service. In public comments during the environmental review process, only 3% of people spoke in favor of alternative 6, so why are we using alternative 6's routing in the Valley?

In my view, this modified LPA has two major issues: 1) it would omit a station at Sherman Way, which is a major east/west transit route in the Valley, forcing transit-riders from Reseda and Winnetka to make unnecessary, likely lengthy transfers and 2) it would duplicate service provided by the in-progress East San Fernando Valley line. In a public transit poor region like the San Fernando Valley we should NOT be duplicating service like this.

Metro Board, I implore you, please reconsider this recommendation.

To: Los Angeles County Metropolitan Transit Authority
Board of Directors

Dear honorable members of the board,

My name is Cooper Crane. I am a graduate student of history at the University of California Riverside in public history. I study the history of public transportation and the history of infrastructure in Southern California. I have worked with the LA Metro Archive and Library and been studying the history of predecessor agencies that led to the formation of the LA Metro.

I am writing to you today regarding the Sepulveda Corridor Project, and the recent decision by the Metro Planning and Programing Committee to support alternative 5 for construction. I believe that the LA Metro Board of Directors should vote to approve alternative 5 and the automated heavy rail corridor in favor of the other alternatives. Specifically, I believe that the Board of Directors should vote in approval of heavy rail alternatives as opposed to the BYD Skyrail.

The BYD Skyrail monorail have several logistical and economical challenges that would make its construction impractical and inappropriate for the San Fernando Valley and West Los Angeles. Construction of above ground-right-of-way will require approval from the California Department of Transportation, as any construction will likely impede traffic along the 405 freeway and significantly delay or otherwise prevent construction. Furthermore, monorail technology will restrict the options that the LA Metro has in the future for additional transfers and connections, as such infrastructure would necessarily be bespoke and incompatible with other transit modalities already in use within the larger Metro system.

Construction of the monorail would negate one of the primary strengths of the Metro that has enabled its historic record expansion among American transit agencies, that being a strong independence from reliance on outside contractors and third-party construction. Metro's planning and engineering staff have significant experience with heavy and light rail but would be dependent on BYD for infrastructure, equipment, rolling stock, and will likely see ballooning contracts and budget requirements to see projects to completion. BYD projects constructed elsewhere, including Sao Paulo in

Brazil have been met with complaints from officials due to reliability issues and cost overruns with their monorails. It is unlikely that these problems would not also be affect Los Angeles.

LA has previously explored monorails in the past. The LA Metro Archive has extensive reading available on the attempts of the Los Angeles Metropolitan Transit Authority, a predecessor to the modern LACMTA which attempted to build a monorail in the 1960s. Planners and officials involved with the monorail proposal that failed in the 1960s had already learned that a monorail would be unable to meet the demand for the transit needs of Los Angeles half a century ago. They also determined that many of the same problems with a lack of interoperability and interchangeability of components, rolling stock and equipment would make a monorail needlessly expensive when compared to traditional heavy-rail alternatives.

Attached to this email is a chapter draft of a book that I am writing about the history of the LA Metro and public transit in the LA area. This chapter provides more details about the history of the monorail and the LAMTA that can provide more details and information about the history I describe here.

I thank you for your time and your consideration and your continued efforts to bring world class transportation to the Greater Los Angeles area.

Sincerely,
Cooper Crane

I write in support or the Board approving the Metro Planning and Programming Commission recommendation to adopt a modified Option 5. A station on the UCLA campus is crucial and the high ridership numbers are premised on that aspect of the plan. This will be a great develop for transportation in Los Angeles.

Thank you.

Good evening Chair and Board Members,

Joining LA Forward Institute and other aligned organizations, I am writing to express my strong support for the staff-recommended, locally-preferred alternatives for both the Sepulveda Transit Corridor (Alternative 5) and the C/K Line Extension to Torrance.

These projects deliver on the promise voters made with Measures R and M by expanding fast, reliable rail service to both the San Fernando Valley and the South Bay. They will improve access to jobs, education, and LAX, reduce traffic and emissions, and strengthen Metro's countywide transit network.

I urge the Board to approve both projects and move them forward without delay.

Thank you for your leadership and consideration.

Good morning Chair and Board Members,Joining LA Forward Institute and other aligned organizations, I am writing to express my strong support for the staff-recommended locally preferred alternatives for both the Sepulveda Transit Corridor (Alternative 5) and the C/K Line Extension to Torrance.These projects deliver on the promise voters made with Measures R and M by expanding fast, reliable rail service to both the San Fernando Valley and the South Bay. They will improve access to jobs, education, and LAX, reduce traffic and emissions, and strengthen Metro's countywide transit network.I urge the Board to approve both projects and move them forward without delay.Thank you for your leadership and consideration.

Re: Opposition to Adoption of Modified Alternative 5 – Sepulveda Transit Corridor Project

Dear Chair and Members of the Metro Board of Directors:

I am writing as a longtime resident of the Santa Monica Mountains hillside community. I respectfully urge the Board **not to adopt Modified Alternative 5** as the Locally Preferred Alternative (LPA) at this time. The alternative advanced by the Planning & Programming Committee on January 14, 2026, raises significant unresolved CEQA, safety, and procedural concerns that require further study before any responsible agency action can be taken.

1. Modified Alternative 5 was not disclosed or analyzed in the Draft EIR.

Modified Alternative 5 poses a new alignment along Beverly Glen Boulevard that affects our community, but neither the DEIR nor public discourse made us aware of this new alternative. CEQA requires that an agency circulate for public review any new alternative that differs substantially from those analyzed in the Draft EIR and that may cause new or more severe impacts. Modified Alternative 5 introduces materially different alignments, tunneling depths, and portal locations that were never subject to public notice, technical review, or comment. Adoption of an undisclosed alternative at the LPA stage would undermine the integrity of the CEQA process and expose Metro to avoidable legal risk. which is causing were not made aware of this alignment during the public co

2. The geotechnical and seismic analysis remains incomplete.

The Santa Monica Mountains contain complex faulting, landslide zones, and highly variable geology. The Draft EIR acknowledges data gaps and the need for additional borings and slope stability analysis. Modified Alternative 5 increases tunneling under steep, fireprone terrain without providing the necessary geotechnical substantiation. Selecting an LPA without this information is premature and inconsistent with CEQA's requirement for informed decisionmaking.

3. Wildfire evacuation and emergency access impacts are inadequately addressed.

The hillside communities along the alignment—including Bel Air, Beverly Glen, and surrounding neighborhoods—depend on a limited number of evacuation routes. The Draft EIR does not evaluate how construction closures, haul routes, or portal operations would affect evacuation times during a wildfire or seismic emergency. Modified

Alternative 5 intensifies these risks by adding construction activity in constrained canyons without providing mitigation or alternatives analysis.

4. A recirculated Draft EIR is necessary before selecting an LPA. Given the introduction of a new alternative, the incompletetechnical studies, and the potential for new significant impacts, Metro should direct staff to **recirculate the Draft EIR** with a complete alternatives analysis and updated technical sections. This approach strengthens the project, improves public trust, and reduces litigation exposure.

5. A more balanced and publicly vetted alternative remains achievable. *Metro has the opportunity to advance an alternative that meets mobility goals while respecting the environmental constraints of the Santa Monica Mountains and the safety needs of hillside communities. A recirculated EIR would allow for a fair comparison of feasible alternatives, including those with lower geotechnical and evacuation risks. Please revisit an alternative that would run along or underneath the 405 Freeway.*

I support the effort to create a public transit between the San Fernando Valley and the Westside. However, due to these reasons, I respectfully request that the Board **decline to adoptModified Alternative 5** and instead direct staff to complete the necessary studies and recirculate the Draft EIR. This is the most responsible path forward for both the region and the communities directly affected by this project.

Thank you for your consideration and for your service to Los Angeles County.

Sincerely,

Jill Anter Wieder

Subject: URGENT: Public Comment - Metro Planning and Programming Committee,

Agenda ITEM 10 - AGAINST Due to CEQA Violations and lack of Public Participation

To the Board Clerk and Members of the Planning and Programming Committee:

Please include this formal objection in the record for **Agenda Item 10: Sepulveda Transit Corridor Project.** We are writing to state that we are AGAINST the current recommendation to approve "Modified Alternative 5" as the Locally Preferred Alternative (LPA).

Our opposition is based on the following:

- **Lack of Analysis:** Metro never analyzed this specific

"Modified" alternative in the Draft EIR, and we never had a chance to review or weigh in on it.

- **Procedural Violation:** By introducing this hybrid after the close of the formal public comment period, Metro has denied the public the legal right to review technical data and comment on the specific environmental impacts of this new configuration.
- **Significant Changes:** Modified Alternative 5 introduces new elements, such as a connection to the Metro G Line and East San Fernando Valley Light Rail Line at Van Nuys Boulevard, which were not presented to the public as a unified project in the original DEIR.
- **Phasing Concerns:** The recommendation now includes an "Initial Operating Segment" (IOS) and a phasing plan that was not the primary focus of the environmental review, potentially masking significant local impacts.

We urge the Board to postpone the selection of the LPA to allow staff to properly study this new alternative, conduct necessary community outreach, and recirculate the DEIR to comply with CEQA's mandate for meaningful public participation and a stable project description.

Sincerely,

Bob Blue and Ziggy Kruse Blue

Dear Metro Planning and Programming Committee,

I ask that you support the following recommendations before you:

- Agenda item 10 - Approve the Locally Preferred Alternative (Modified Alt 5) for the Sepulveda Transit Corridor - this heavy rail option with a dedicated UCLA stop is exactly what the Sepulveda corridor needs! I myself would use it frequently.

- Agenda item 11 - Approve the Locally Preferred Alternative for the extension of the C Line to Torrance and certify and approve the Final EIR! This would let me actually take the metro to work efficiently, something I desperately want.

Thank you for advancing high-quality transit in the region.

Also, as a member of IBEW 11, transit projects create good reliable work for us and other trades. From having worked on the D line extension, it feels incredibly rewarding knowing that I helped to build transportation for many, and to build LA's future. Building the Sepulveda line, and building out the K line will help people have more options to get around and reduce traffic.

Thank you for advancing high-quality transit in the region.

Dear Metro Planning and Programming Committee,

I ask that you support the following recommendations before you, **with some modifications:**

- Agenda item 10 - while this heavy rail option with a dedicated UCLA stop is an undeniable upgrade for the entire county, I strongly recommend looking into having a connection at **Expo/Bundy rather than Expo/Sepulveda.** The 405 is a significant barrier that severely impacts access to and from the project, while a Bundy alignment would help connect the project to hubs such as Santa Monica College, the future of the Santa Monica Airport, the Santa Monica business park that is about to go through a major redevelopment,…
A second phase along Bundy would also allow a connection to LAX that goes through more hubs such as Venice High, Mar Vista, LMU,…

If we truly care to have a positive impact on the region's various communities, to lower VMTs, to create safe and efficient first and last mile options,… a connection at Bundy seems like a no brainer.

- Agenda item 11 - Approve the Locally Preferred Alternative for the extension of the C Line to Torrance and certify and approve the Final EIR!

Thank you for advancing high-quality transit in the region.

Dear LA Metro Board,

I work in Los Angeles County and take LA Metro buses / rail several times a week. I urge you to support items 10 and 11 on the agenda, and to withhold support from agenda item 11.1.

Agenda item 10 - Approve the Locally Preferred Alternative (Modified Alt 5) for the Sepulveda Transit Corridor
The Metro staff-recommended Locally Preferred Alternative (Modified Alt 5) is preferable for its:
- fastest end-to-end time
- largest reduction in vehicle miles traveled (VMT) and therefore air pollution from cars
- cheaper than the original Alternative 5
- UCLA on-campus dedicated stop

Agenda item 11 - Approve the Locally Preferred Alternative for the extension of the C Line to Torrance and certify and approve the Final EIR.
This hybrid LPA would create thousands of jobs and attract 1.5 million new riders, all without the added cost, approvals, and disruption in the Hawthorne alternative. Please certify the Final EIR and champion this critical rail project.

Thank you for advancing high-quality transit in the region.

Sincerely,
Benjamin Yeh

From: Christopher Yeh
To: Board Clerk

Dear LA Metro Board,

I work in Los Angeles County and take LA Metro buses and rail multiple times a week. I urge you to support items 10 and 11 on the agenda, and to withhold support from agenda item 11.1.

I Support Agenda item 10 - Approve the Locally Preferred Alternative (Modified Alt 5) for the Sepulveda Transit Corridor
The Metro staff-recommended Locally Preferred Alternative (Modified Alt 5) is preferable for its:
- fastest end-to-end time
- largest reduction in vehicle miles traveled (VMT) and therefore air pollution from cars
- cheaper than the original Alternative 5
- UCLA on-campus dedicated stop

I Support Agenda item 11 - Approve the Locally Preferred Alternative for the extension of the C Line to Torrance and certify and approve the Final EIR.
This hybrid LPA would create thousands of jobs and attract 1.5 million new riders, on right-of-way (ROW) owned by LA Metro. The Hybrid LPA has already gone through the EIR process, and it is the best use of my taxpayer dollars.

I am AGAINST Agenda Item 11.1.
Agenda Item 11.1 would require re-doing a Final EIR for the Hawthorne alignment, leading to a 2-4 year delay, which will inevitably lead to rising costs. I do not support my taxpayer money funding a higher-cost, longer-term project.

Thank you for advancing high-quality transit in the region.

Sincerely,
Christopher Yeh

To whom it may concern,

I cannot make the meeting this Thursday, as I am a teacher. But I thought I should leave my support here.

I think it's fantastic that we are expanding the LA metro, I'm excited about the D line expansion, I can't wait for the Sepulveda line to be finished, and I think I would be remiss without giving the train some love in the south bay. Studies have shown that when you build trains, people ride them. LA is one of the fastest growing transit systems in the world, and especially as the world cup and olympics approach, more trains means less traffic as people take the train to get places, which takes cars off the road.

Thank you for your time!

Sincerely,

Atlas Novack

Dear Board,

I think the first issue to look at when spending money is how many people will be positively affected.
An underground rail for the Sepulveda Pass sounds great until one realizes it will take more than a decade.
In the mean time dedicated bus lanes along the 405 is way better than HOV Lanes. Two in a car compared to a Bus is 10 vs. 50+.
Bus Lanes would be fast and is mostly the cost of paint and some minimal construction. If it was started by this Summer it would be finished before the 28 Olympics.
Consider changing the focus for the Corridor.

Thanks,
Robert Bachmann

Hi,

I am writing to support the Metro Board adopting Alterative 5 (or even 4) for the Sepulveda transit line.

I lived in West LA from 2013 to 2021, and I have been a public transit user for a long time. In the mid-2000s, I often took the 33 and then-Gold Line to get from Loyola High School to my mom's office in Pasadena. In 2017, I moved to a part of West LA that allowed me to take the bus to work in downtown Santa Monica.

If this line had existed then, I would have gone to Sherman Oaks more frequently. I have friends who do or did live in the Valley, and having the option to take this line to Sherman Oaks would have made it easier to get over the hill and not have to worry so much about traffic.

I also know so many people who commute from the Valley to the West Side. An automated heavy rail option will allow so many of them to choose public transit over driving.

Please select one of the automated heavy rail options. It'll help make our amazing city even better.

Brendan Quinn

Dear Metro Board,

I am a long time Angeleno and I have worked at UCLA for more than 30 years. I'm writing to urge you to support Modified Alternative 5 for the Sepulveda Pass Corridor project that is on your agenda tomorrow. I'm very happy to see that Modified Alternative 5 is the Metro staff recommendation.

We need good public transportation from the Valley to the Westside. The 405 is overcrowded already and is likely to become even more jammed as housing prices push more staff, faculty, and students to the valley. Alternatives 1 and 3 would do virtually nothing to address traffic problems and I appreciate that your staff saw so too and rejected them. Modified Alternative 5 would go a long way toward providing real alternatives for commuters from the valley to the westside. Please vote FOR approving the staff-recommended Locally Preferred Alternative.

Thank you!

Ann Carlson

Agenda Item 10: FOR

Dear Metro Board of Directors,

I strongly urge the Metro Board to proceed with Modified Alternative 5 as the Locally Preferred Alternative (LPA) for the Sepulveda Transit Corridor.

I am FOR Agenda Item 10: Approve the Locally Preferred Alternative (Modified Alt 5) for the Sepulveda Transit Corridor. This heavy rail option will best serve UCLA students and residents of the San Fernando Valley and West LA, and implement important public transportation alternatives to cars in an area that is inundated with heavy, congealed traffic for most of the day.

I support the determination by Metro staff that Modified Alternative 5 is the best alternative to serve the needs of this Corridor. It includes (1) a direct stop at UCLA Gateway Plaza, (2) direct connections to other Metro lines, (3) stations placed where students and residents will go, and (4) frequent trains with low headways. I hope that Metro can expedite the environmental review of the Sepulveda Line to speed up construction, reduce costs, and ensure that we can benefit from this Line as soon as possible.

Thank you for voting to transform public transportation for Los Angeles. As we anticipate the Olympic games and continue to build housing to meet residents' needs and mitigate our housing crisis, it is of paramount importance that we create sustainable and affordable public transit solutions and bike lanes to encourage people to consider alternatives to car transport.

Los Angeles County Metropolitan Transportation Authority

Attn: Sepulveda Transit Corridor Project Team

Re: Formal CEQA Comment on the Draft EIR â€“ Sepulveda Transit Corridor Project

Dear Project Team,

I am the owner of a single-family residence constructed in 1957, located in the Sherman Oaks hillside area, at the toe of a steep slope, within the area affected by the proposed Sepulveda Transit Corridor Project. I submit this letter as a formal comment under the California Environmental Quality Act (CEQA) regarding the adequacy of the Draft Environmental Impact Report (DEIR).

The DEIR relies on generalized, corridor-level geotechnical analysis that is inadequate for properties located at the toe of steep hillsides, where sensitivity to ground movement, vibration, and groundwater changes is materially higher. Toe-of-slope properties present site-specific conditions that require targeted analysis, including differential settlement risk, reduced lateral and subjacent support, amplified vibration effects, and slope instability. The DEIR does not include property-specific slope stability modeling for these conditions, despite well-documented geological variability in the Sherman Oaks hills. This omission fails to satisfy CEQAâ€™s requirement for a good-faith, reasoned analysis where localized conditions are known to be unique.

My residence was constructed in 1957, prior to modern hillside construction and seismic standards. Older foundations are inherently more vulnerable to tunneling-induced settlement and vibration. The DEIR fails to analyze impacts to existing structures as they actually exist, instead relying on assumptions more appropriate for modern construction. This understates foreseeable risk and does not meet CEQAâ€™s disclosure requirements.

Sherman Oaks hillside areas are known to contain colluvial soils, historic landslide deposits, and migrating groundwater, particularly at slope toes. Tunneling can alter groundwater pathways and subsurface pressures, increasing the risk of slope instability and long-term creep. The DEIR does not adequately analyze tunnel-induced groundwater pressure changes, impacts on slope stability, or cumulative effects of construction and long-term operations. These are reasonably foreseeable impacts that require detailed evaluation.

Even in the absence of immediate visible damage, underground tunneling beneath hillside properties can reduce lateral and subjacent support, increasing long-term structural and slope risk. The DEIR fails to meaningfully analyze this impact or to propose enforceable mitigation measures specific to hillside toe-of-slope properties.

The DEIR also improperly defers critical mitigation to future studies and

monitoring programs. For steep hillside properties, such deferral is inadequate. CEQA requires specific and enforceable mitigation commitments, including tunnel depth, construction methods, vibration limits, and slope protection measures.

To comply with CEQA, the Final EIR must, at a minimum:

1. Conduct site-specific geotechnical and slope stability analysis for hillside toe properties;
2. Analyze impacts to older (1950s-era) foundations;
3. Fully evaluate groundwater migration and slope instability risks;
4. Address loss of lateral and subjacent support; and
5. Commit to enforceable, project-level mitigation measures.

Absent these revisions, the Draft EIR fails to adequately disclose and mitigate significant environmental impacts specific to hillside toe conditions in Sherman Oaks. Approval of the Project without correcting these deficiencies would be premature and legally vulnerable.

Thank you for the opportunity to submit these comments. I respectfully request that Metro address these issues fully in the Final EIR.

Sincerely,

Bernadette and Alec Tuckman

Hi There,

I would like to voice my support for the modified alternative 5 option for the planned corridor. After reading many things about the different alternatives, it seems clear to me that modified alternative 5 with heavy rail is going to be the best option for us as Angelinos who live closer to the valley.

I can't wait to use this in the future!

Best,
Patrick Yaghoobians

Dear Chair Dutra and members of the board,

Agenda item #10 (2025-1062, Sepulveda corridor):

I support the staff recommended Locally Preferred Alternative (Modified 5), unanimously approved by the Planning Committee on 1/14/2026. It is the alternative with the highest benefit-to-cost ratio, and will best serve the future transit needs of Los Angeles.

Agenda item #11 (2025-0818, C line extension):

I support approval and FEIR certification of the staff-recommended Locally Preferred Alternative (LPA), which travels along the Metro-owned Right-of-Way (ROW). We commend Metro for measures such as walking paths, landscaping, sound walls, freight improvements, and grade separations for safety, noise reduction and enhancing pedestrian and bicycle mobility. This is a critical project to enhance mobility in the South Bay, and to allow direct rail transit connectivity in the future between Long Beach, the South Bay and LAX areas. The Hawthorne Option is far costlier and more difficult to construct, for negligible enhanced benefit compared to the LPA.

Thank you for your consideration.

Sincerely,

Thomas Carroll

To the Board,

I would like to express my support for building LPA 5 in the Sepulveda Transit corridor. As a daily rider of various Metro Rail lines and someone who used to commute through this corridor every work day, I understand how important this route through the mountains is to my neighbors. We owe it to our city and region's future to build the highest capacity and most sustainable infrastructure we can. The LPA 5 is that route. Please approve it.

Also I would like to encourage the board to vote in favor of the C (Now K) Line Extension using the hybrid alignment rather than the one along Hawthorne Blvd. Metro already owns the land for the hybrid alignment making this route cheaper. It connects to an existing transit center and it provides rail to the South Bay cheaper and probably sooner. The alignment along Hawthorne requires more complicated and expensive construction, a complicated interaction with CalTrans, and because of this it will take longer and be significantly more expensive. The South Bay deserves better.

Lastly I'm disappointed that the board is trying to get LA excused from its obligations under SB79. Having just purchased a condo in LA I am of the opinion that we have a massive shortage of housing here and this has driven rent and house prices through the roof. My wife and I are very privileged that we were able to afford this and I wish that extreme privilege wasn't required to live here comfortably. I love it here. I want more people to be able to live here. Please drop your opposition to this law and do everything you can to help LA County make it successful.

Thank you for your time,
-Alex Waggoner

Hello,

I'd like to write in support of the following items for the board meeting this week:

1. The Hybrid alignment for the K Line south extension will provide fantastic transit access to the South Bay at a reasonable cost. Killing this project or burdening it with extra costs would be a disaster for the region. Please keep this project moving forward!

2. The hybrid Alt 5 routing for the Sepulveda line looks great, please move this project forward!

3. SB79 provides much-needed housing for the region, please end your opposition to this fantastic bill.

Thank you very much for your consideration,
Daniel

How can the Metro board believe that tunnel, through pristine wildlife and environment is the better choice to rapid transit? The 405 is already there!! Put an elevated track there right down the middle !!! It would cost far less money and far less time to construct!! This project puts the Boston Big Dig to shame! It is a travesty to the mountain!! -Karen Marks

Los Angeles Metro Planning Department,

I am writing to express my strong disapproval of the proposed Modified **Alternative 5 rail line alignment**, which would essentially route the line beneath **Beverly Glen Boulevard through the hills of Sherman Oaks and Bel Air**. After reviewing the available information, I have serious concerns about the long-term consequences this plan would impose on the surrounding communities.

Running a major heavy rail tunnel beneath a densely populated hillside corridor presents significant risks. The construction and ongoing operation of such a project would inevitably disrupt daily life for residents who rely on the stability and safety of this terrain. The hills in this area are already sensitive to geological movement, and introducing large-scale tunneling raises legitimate concerns about structural integrity, noise, vibration, and emergency access. These are not abstract worries—they directly affect the safety and well-being of the people who live above the proposed alignment.

Additionally, the presence of a subterranean rail line has the strong potential to **lower property values** in neighborhoods that have long been defined by their residential character and environmental stability. Homeowners who have invested in these communities should not be forced to absorb the financial and quality-of-life consequences of a routing decision that offers them no tangible benefit.

I am also deeply concerned about the proposal to place a subway station at **Ventura Boulevard and Van Nuys Boulevard**, one of the most congested intersections in the San Fernando Valley. This location already struggles with heavy traffic, limited pedestrian infrastructure, and constrained roadway capacity. Introducing a major transit hub at this intersection would intensify congestion, complicate commutes for thousands of drivers, and create new safety challenges for pedestrians and cyclists. Rather than improving mobility, this station placement risks making an already overburdened corridor even more difficult to navigate.

I urge Metro to reconsider both the Modified Alternative 5 alignment and the Ventura/Van Nuys station location. These decisions will have lasting impacts on the safety, livability, and economic stability of the affected communities. I strongly encourage the agency to pursue alternatives that achieve transit goals without imposing disproportionate burdens on residents.

Thank you for your attention to these concerns. I expect that Metro will take community input seriously and reevaluate these aspects of the project with the care they deserve.

Sincerely,

Jane Vaynerov

Hello LA Metro Planning and Programming Committee,

My name is Maya Dondonyan, I am a full-time student at Santa Monica College and I wanted to reach out to first honor the incredible work your team is doing in creating this project and for expanding Metro's reach throughout the city. I am grateful for the opportunity to share with you that I think it would be invaluable if you chose to extend the Sepulveda Pass line down to Bundy Station. It would truly be the superior end point of the station based on ridership opportunities for SMC students now and in the future.

Thank you so much for your time and for all the hard work you do!

Warmly,

Maya Dondonyan

Honorable Chair Dutra and Directors of the LA Metro Board,

As a resident of Los Angeles County, I write in strong support of Approving the Locally Preferred Alternative (LPA) as Modified Alternative 5 for the Sepulveda Transit Corridor and urge you to advance the FEIR with the staff-recommended LPA. The Locally Preferred Alternative selected by Metro staff in 2025 and refined in the draft EIR delivers a thoughtful and comprehensive solution. It provides a transit corridor that would be safer and quieter, connects directly to employment and educational centers, and improves first-last mile connectivity. With the connections between the Van Nuys Metrolink Station, UCLA Station, and E Line Expo/Sepulveda Station, this project brings a reliable 10-minute trip from the San Fernando Valley to Westwood and direct rail access to Westwood, Culver City, Santa Monica, and Downtown LA.

The San Fernando Valley and the Westside urgently need a transit alternative to the congested I-405 and currently lack North-South rapid transit options. While Metro has expanded rail across the County, the Sepulveda Transit Corridor, promised in Measure R and Measure M, is long overdue. Please certify the Final EIR and champion this critical rail project for residents of the San Fernando Valley, the Westside, and regional mobility.

Thank you for advancing high-quality transit connecting the San Fernando Valley, the Westside, and the rest of Los Angeles.

--
Best,
Leon Gu

Dear Metro Board:

I support Item 11 and oppose the last minute attempt (Item 11.1) to derail the C Line Extension to Torrance by caving to NIMBY pressure. Metro already owns the ROW, and we should not delay the project by years and spend an extra $700M to get worse ridership! Please support staff's recommendation, and vote no on 11.1.

I support Item 10 - please support staff's recommendation on the Modified Alternative 5 route for the Sepulveda Transit Corridor.

I oppose Item 33 - SB-79 is law in California, and it makes Metro look absurd to ask for an exemption for L.A. County. In fact, if Metro embraced SB-79 and more housing was built around Metro stops, it would lead to higher ridership of the system.

Thank you,
Isaac Poplin

To the Metro Board,

I am writing to add my voice of support to the Sepulveda Transit Corridor plan for fast, high quality underground rail service from the valley to the west side. I drive this at least once a week and it's a highly inconvenient calculation about when to schedule my trip to try and avoid some of the delays.

Let's continue proving more real alternatives to cars.

Hello,

I'm writing to support the Sepulveda Transit corridor - it will free up our city, our time, and our lives. Traffic is holding our potential hostage.

I had a job four years ago that required a commute to Culver City; on a good day it took me 90 minutes to get there. On a GOOD day. Some days it took me that long to even get from my home in Sherman Oaks to the 405.

Speaking of that - this change will also free the communities around the 405 from the endless morning backups in traffic, the disruptive "cut through drivers" and the follow-on complications that can spawn snarls all the way back to Riverside Drive.

I also look forward to reliable public transportation as a way to keep our teens off the road before they have enough experience driving. I hope it's a good alternative for people who've gone out for fun and now won't get into their cars drunk or high.

This project will bring vitality and freedom to Angelenos on both sides of the hill. Hooray for growth and change!

Hello,

I am a lifelong Angeleno who has lived in the San Fernando Valley since 2012 and I just wanted to write in with my support for the Sepulveda Pass underground metro proposal.

Currently, the traffic situation with the Sepulveda Pass is bleak, forcing SFV residents away from jobs and education options on the Westside in order to avoid long commute times. I have turned down work opportunities because they weren't worth the 2hr daily commute. My brother cried in relief when COVID pushed him to work from home so he didn't have to commute to his office off of Wilshire every day.

An alternate option, one that is public, affordable and quick will improve the lives of so many Angelenos amd hopefully make this great city we live in connected in a way it's never been. I hope that this plan is approved and we see a Metro through the Sepulveda Pass soon.

Thank you,
Nandini Bapat
Encino, CA

Hi,

I'm just writing in support of a program that will make the people of Los Angeles' lives better!
I'm in favor of shorter commutes, more jobs, and less emissions in our city!
It will personally make my life better as someone who works in burbank near toluca lake this would be a game changer! I would go to the west side WAY more!
It's a slam dunk! Let's do it!

Thanks!
Mike

Dear Metro,

I am writing as a resident of LA Council District 4 in support of the proposed Sepulveda Transit Corridor. The Modified Alternative 5 plan is an excellent choice, and the Metro staff deserves plaudits for recommending it. This project alone would be immensely helpful to public transit, vehicle traffic, and much of the city in general. Together with Metro's other proposed transit expansion projects, it could be part of something truly transformational for all of LA, with benefits so numerous, we can't even predict them all yet.

So, the Sepulveda Transit Corridor has my full, enthusiastic support. Please keep fighting to implement the full and robust transit system our city both needs and deserves.

Thank you,
Colin McCormick

Dear Metro Board Members

I urge you to support the Sepulveda Transit Corriodor Alternative 5 **with the modification of consideration for locating the Expo Line connection at the Bundy Station** for the following reasons:

- Connecting the subway to the Bundy Station will better align with the eventual connection to LAX.

- The Bundy Station location will better serve these activity centers:

- Bundy-Exposition Transit Village
- Major developments by Riot Games at Olympic and Bundy, plus high density housing there.
- Major development anticipated for the SM Airport business park with mixed-use high-density housing
- Planned creation of Santa Monica's Great Park commencing in 2028
- SMC Bundy Campus
- Playa Vista, which is currently poorly served by transit
- Mar Vista's Venice Blvd commercial corridor
- Downtown Westchester

Thank you for your tireless work improving our region's transit network!

Hello,

I urge the Metro Board to support the modified Alternative 5 LPA and to start the FEIR for the Sepulveda Transit Project. This will be one of the most transformative US transit projects of this millennium, so let's get it started ASAP.

Additionally, I urge the Metro Board to support the FEIR certification and the hybrid LPA for the South Bay Extension. This project will be crucial in providing transit connection to an underconnected part of the LA metro area.

Finally, I ask the Board to support SB79 as is, without modifications to placate a handful of vocal NIMBYs.

Thank you for your time.

I totally approve the proposed plan and would love to see it implemented as soon as possible. It's time that the Valley residents had a viable alternative to struggling through the 405 and the 101/405 daily nightmare.

The system "over the hill" has proven a success and is widely used. Bring The Valley into the 21st century in time for the Olympics!

Hello,

My name is Vasan Arul and I wanted to voice my support for the Sepulveda Pass modified alternative 5.
As someone who teaches and has family in the Valley, it would be instrumental to have this option to quickly and safely get from the Westside to Van Nuys.

This option would not only improve the immediate lives and needs of people such as myself but also transform the LA Metro ridership and support overall, with the potential to give the elderly, disabled, and anyone who wishes not to drive a viable transportation option (and a significant traffic reduction for those still prefer their cars).

I truly hope the board takes the recommendation previously proposed and look forward to the Los Angeles this project could bring.

Best,
Vasan

Dear Members of the Metro Board,

I respectfully urge the Board not to adopt Modified Alternative 5 as the Locally Preferred Alternative for the Sepulveda Transit Corridor.

From an administrative and CEQA standpoint, the record does not support staff's conclusion that Modified Alternative 5 is the superior alternative. Other alternatives evaluated in the Draft EIR demonstrate equal or superior travel times with fewer operational assumptions and less reliance on future design refinement. Selecting an alternative that depends on optimistic projections rather than clearly demonstrated performance exposes the decision to claims that the Board failed to proceed in a manner required by law.

In addition, access to UCLA must be evaluated based on objective effectiveness, not generalized statements of stakeholder interest. The Draft EIR shows that other alternatives provide more direct, intuitive, and functional access to UCLA's core academic and medical destinations—one of the corridor's primary trip generators. Choosing an alternative that delivers inferior access risks undermining both ridership projections and the substantial evidence standard required to support an LPA determination.

Finally, staff's conclusion that Modified Alternative 5 minimizes environmental and neighborhood impacts is not adequately supported by comparative analysis. Several alternatives similarly avoid aerial alignments and reduce displacement while avoiding additional tunneling complexity, construction staging challenges, and long-term operational risk. Impacts must be evaluated comparatively and holistically, not selectively emphasized to support a preferred outcome.

Because adoption of an LPA is a discretionary act with long-term legal and financial consequences, the Board must ensure its decision is supported by substantial evidence in the record and reflects a reasoned comparison of alternatives. For these reasons, I respectfully urge the Board to reject Modified Alternative 5 and advance an alternative that more clearly maximizes travel time efficiency, UCLA access, and impact avoidance.

Thank you for your consideration.

Respectfully submitted,

Hi - My name is Eric Dean. I live in Inglewood but I have family in the Valley. I'm looking forward to the upcoming Sepulveda (405) Transit Line being developed, as it's both a mental and physical undertaking to drive to the Valley to see them.
I would love for the Metro board to go with the heavy rail option. I'm a fan of option 5 as it feels like the most cost effective and the option with quicker pick up times. I am a fan of public transit. I've visited cities where it makes a difference how people live and enjoy their lives. I'm hoping in the next two public meetings the metro decides on the option that benefits the citizens of LA.

Also, as a Inglewood resident, the K-line has made commuting into LA much easier. I would love to see it extended north to Hollywood and south into Torrance. I've heard a cut and cover build could reduce costs and build times. Please consider this when submitting planning options.

Best,
Eric Dean
Inglewood Resident

Position: Needs More Consideration

I am writing on behalf of the Board and members of the Brentwood Association, a community of 500 residents bounded on the West by the Veterans Administration property, on the north by Sunset Boulevard, on the east by Church Lane, and the South by Waterford Street. We previously took a position that we support having a station on the UCLA campus, and oppose Alternative 1 because it did not have a station on campus. Our understanding based on the DEIR and all previous presentations by Metro was that the UCLA station would be at Gateway Plaza near Westwood Blvd.

However, we became aware a few days before the DEIR comment period ended that UCLA made a last minute request to move the station to Strathmore Avenue.**The Brentwood Glen Association opposes moving the station to Strathmore as it would have a severe negative impact on the residential area of Westwood near the station.**

In addition to the significant traffic impacts of adding a station immediately adjacent to the neighborhood instead of adjacent to a commercial district, moving the station would also trigger SB79 which would significantly change the neighborhood surrounding the station.

We do not think that it is reasonable for UCLA to unilaterally decide that a few years' of construction impacts at Gateway are more important than creating decades of problems by moving the station to Strathmore.

We ask that the Metro Programming and Planning Committee clarify that its approval is for the Gateway Plaza station location designated in the DEIR.

Thank you for your consideration.

To the Metro Board,
RE: STC LPA Consideration – January 22

I **support** the choice to proceed with Modified Alternative 5 as the Locally Preferred Alternative for the Sepulveda Transit Corridor Project.

Metro staff have made a good recommendation as it includes a direct on-campus station at UCLA and a seamless connection to the Purple/D line in Westwood. It will improve access and opportunity, promote transit equity, and reduce congestion. I believe its short travel times will increase transit usage, especially when benchmarked with existing travel times on the notoriously congested 405; thus making the line more of a preferred choice for those who are NOT transit dependent.

Modified Alternative 5 will increase access to affordable housing, and it will support economic development while concurrently helping protect the environment by reducing car trips.

This is a project of regional significance, and my voice urges the Metro board to approve the staff recommendation and advance the project as soon as possible; and without delay.

- One suggestion I would like to urge is to revisit where the plan meets up with the G line. I refer to the significant walking distance required in the current design for those transferring between the 2 lines at that station. Please effort to minimize such an inconvenience to travelers in that station's design and placement.

David Alpern

Hello,

I am submitting a public comment for the January 22nd, 2026 regular board meeting in full support of the following:
- Regarding item 10: **Moving forward with Modified Alternative 5** as the LPA for the **Sepulveda Transit Corridor**
- Regarding item 11: **Certifying the EIR** for the **South Bay extension** on the **Hybrid ROW** to Torrance

On the Sepulveda Transit Corridor:
- With trains slated to run under Van Nuys Blvd, I encourage staff to look into improving the vertical connection to the G Line. This could be done by having an underground passageway linking the G Line, ESFV, and Sepulveda Line stations.
- Metro should also look into beginning the construction of underground stations on Van Nuys when the construction of the ESFV Line stations commences, ensuring no future station closures or prolonged construction

On the South Bay extension:
- Metro needs to advance with the Hybrid alignment and not the Hawthorne alignment.

  - According to Metro's own findings, the Hawthorne alignment is significantly more expensive than the Hybrid alignment while also having lower ridership.
  - Furthermore, the Hawthorne alignment will enormously delay the construction and completion of the extension, possibly by a decade. For an extension with the possibility of reaching Long Beach and the aforementioned downsides of the Hawthorne alignment, this increased time (and increased cost) is not worth it.
  - Residents in the South Bay have argued that the Hybrid alignment will displace residents and be an overall net-negative for the community. **This is false**. The Hybrid alignment is situated along Metro-owned right-of-way (which is also already an active freight corridor) and wouldn't displace residents. Additionally, plans for the Hybrid alignment will bring safety improvements to existing at-grade crossings, which is a positive for the community

- Metro has spent years studying the Hybrid alignment. Throwing away all that immense effort for a costlier, less popular, and harder-to-build alternative championed by unfactual claims is not the way to go. If Metro is serious about providing exceptional service, then Metro needs to advance with the Hybrid alignment.

Have a good day

Sincerely,
Ian

Dear Metro Board,

I am a Redondo Beach resident and I am writing in support FOR the LPA alignment for the K Line extension to Torrance, to be discussed at the 10am meeting on January 22nd. High-quality transit *is a good thing* and is indicative of a healthy, thriving community. We need transit in the South Bay as well to further economic development and community building. This project would make the Metro accessible to me and many other Redondo Beach residents via a short hop on the Redondo Beach 102 bus (or a longer walk).

I specifically encourage the Board to certify the LPA and I am writing AGAINST Item 11.1 (the Hawthorne alignment). The LPA alignment is better than the Hawthorne alignment because the Hawthorne alignment costs significantly more while not having much of an advantage. The Hawthorne alignment would not do anything for the bus system or businesses on Hawthorne because there are no stops on the road until around the South Bay Galleria, and being able to see the metro line from Hawthorne does not mean better connectivity with buses. The Redondo Beach Transit Center from the LPA has better connections with the buses than the South Bay Galleria station proposed in the Hawthorne alignment because it is already a central bus stop. The South Bay Galleria is still accessible from the transit center, so any benefit that the South Bay Galleria stop provides is covered with much better capability by the Redondo Beach Transit Center stop. The Hawthorne alignment's further distance from residential areas does not provide much of an advantage because the freight line in the right-of-way will still continue to run. The LPA will provide improvements to the safety and sound of the freight line by providing quiet zones and better grade crossings, while the already quiet light rail trains would not impact much. There will even be a walking path along the rail at certain portions! The experience of homeowners along the right-of-way will be improved by this project by having safer railways next to them. Finally, going with the Hawthorne alignment would require undoing a significant amount of the work that has been done for the FEIR for the LPA, wasting all the effort from the past few years and delaying the project. The increased cost of the Hawthorne alignment would also delay the project and put high quality transit further out of reach of the South Bay. In a world where transit funding is becoming increasingly difficult to come by, making cost-effective and beneficial decisions is important.

This build is necessary for transit not just in the South Bay but beyond to places like Long Beach where the line could further extend. If the Hawthorne alignment is picked, this project will be put into unnecessary fiscal danger, running the risk of not just South Bay residents but many more residents of the county losing this vital

service.

In addition, I am FOR Item #10 to approve the LPA for the Sepulveda Transit Corridor Project to build up the quality of the LA Metro transit system. South Bay residents would benefit by being able to access more locations faster if the Sepulveda line is built. I would also encourage the Metro board to declare support of SB79's transit oriented development. More development around transit stations means more ridership and thus more revenue for the Metro to continue building out the transit system. Building extensions like the K line extension is just the first step, SB79 allows many more people to have easy access to the system, creating a thriving Los Angeles. When transit thrives, the people thrive. Thank you for your time reading this comment.

Best regards,
Corban King

My name is Troy Rubio Trejo, and I am a resident of Los Angeles County. I am writing to express my full support for several critical Metro projects that will greatly enhance regional mobility and equity across our county.

I fully support the Sepulveda Transit Corridor – Modified Alternative 5 (5LPE) and the Final Environmental Impact Report (FEIR). This project is essential to improving north–south connectivity and reducing congestion in one of the most heavily traveled corridors in the region.

I also strongly support the opening of the D Line Phase One through the Wilshire Corridor, as well as the South Bay extension of the K Line. These projects represent long-overdue investments in reliable, high-capacity transit for communities that need it most.

Additionally, I fully support the Metro Board's selection of the Metro ROW Hybrid Alternative alignment for the South Bay K Line Extension. This alignment will provide efficient service while maximizing long-term benefits for riders and surrounding communities.

The South Bay deserves expanded transit options, and these projects are vital to improving access, mobility, and quality of life. I urge the Metro Board to continue moving forward decisively on all three of these major projects.

Thank you for the opportunity to provide public comment and for your continued leadership.

Respectfully,

Troy Rubio Trejo

Los Angeles County Resident

Dear Metro Board,

My name is Sarah and I live in Sherman Oaks. I wanted to support Metro Staff's recommendation to utilize Alt 5 for the Sepulveda Transit Corridor Project. As the report from Metro Staff states, I agree Alt 5 balances high ridership and high frequencies and automated heavy rail while avoiding difficulties of a raised project through the Santa Monica mountains.

I live right off of Beverly Glen and as a result daily experience the insane amount of traffic trying to get over the hill into more central LA. I know that traffic will only get worse if a transit solution isn't reached. We desperately need this new metro project not only to help solve the traffic nightmare, but for safety. Driving in our neighborhood is incredibly dangerous with the amount of traffic and commuters- not that I blame them, they have no choice but to drive! I am very excited for the Alt 5 project, would live right by the proposed Van Nuys/Ventura station, and would utilize the completed project frequently. I've long dreamed of such a transit option.

Please support Alt 5.

Sincerely,
Sarah Bowers

I support expanding Metro, but only if choices are grounded in reality, not ideology.

For the South Bay extension, the hybrid alignment is the only serious option. It balances cost, constructability, travel time, and neighborhood impact. Anything more extreme risks overruns and delays that undermine public trust and project viability.

For the Sepulveda Line, Alternative 5 is the correct choice. It delivers the strongest combination of capacity, reliability, and long-term system performance. Settling for weaker alternatives would be a permanent mistake on one of the region's most critical corridors.

However, none of this works without land-use alignment. Metro's refusal to support SB 79 directly undercuts ridership, value capture, climate benefits, and fiscal justification for these investments. Building multi-billion-dollar rail lines while opposing transit-oriented housing is a policy contradiction that guarantees underperformance.

Commit to the South Bay hybrid alignment, select Sepulveda Line Alternative 5, and stop sabotaging transit by blocking the housing that makes it succeed.

Hi,

I'm not able to make it to this Thursday's Metro Board meeting, so I'm writing to express my support for two projects.

Sepulveda pass project: I strongly support the recommended Modified Alt 5 alignment. I live directly adjacent to the future station in Van Nuys and work in Westwood. This will be an incredibly important project for the entire region and it's vital the Metro Board moves forward with this alignment.

K line south bay extension: I frequently travel along the proposed alignment, but am forced to drive and contribute to traffic because there's no good transit connection in the area. I strongly support the certification of the current FEIR and the hybrid LPA. This alignment is the most cost effective and fastest way for the region to have a link to the south bay.

I strongly urge the Metro Board to move forward with both of the projects above.

Thanks,
Byron Lutz

Dear Directors and Board Clerk,

Yesterday the stakeholders on the C-Line extension project were limited to 30 seconds each while public comments for the Sepulveda Transit project were all allowed one full minute each. 15 of our callers got passed over never being called to speak. During the Construction Committee, although shorter and only a handful of commenters, we were cut to 30 seconds each as well.

Next week for the full board public hearing on the C-Line FEIR, if comments need to be limited please consider limiting on the Sepulveda Transit people as a fair trade. Especially since they're largely in support without any issues to discuss while on the C-Line our livelihoods are at stake.

Thank you for your attention to the matter.

Sincerely,
Niki Negrete-Mitchell

Dear Chair Dutra and members of the board,

The Rail Passenger Association of California and Nevada (RailPAC) is an all-volunteer non-profit passenger rail advocacy group, founded in 1978.

Agenda item #10 (2025-1062, Sepulveda corridor):

RailPAC supports the staff-recommended Locally Preferred Alternative (Modified 5), unanimously approved by the Planning Committee on 1/14/2026. It is the alternative with the highest benefit-to-cost ratio, and will best serve the future transit needs of Los Angeles.

Agenda item #11 (2025-0818, C line extension):

RailPAC supports approval and FEIR certification of the staff-recommended Locally Preferred Alternative (LPA), which travels along the Metro-owned Right-of-Way (ROW). We commend Metro for measures such as walking paths, landscaping, sound walls, freight improvements, and grade separations for safety, noise reduction and enhancing pedestrian and bicycle mobility. This is a critical project to enhance mobility in the South Bay, and to allow direct rail transit connectivity in the future between Long Beach, the South Bay and LAX areas. The Hawthorne Option is far costlier and more difficult to construct, for negligible enhanced benefit compared to the LPA.

--
Best Regards,

Brian Yanity
Vice President-South and Board Member

As for Item 33, I want to add that SB 79 will generate revenue badly needed by Metro. If we don't want to end up like other transit agencies around the nation that are facing fiscal cliffs, we need new revenue and ridership drivers. SB 79-enabled housing will greatly boost Metro's position.

On Tue, Jan 20, 2026 at 11:49 PM K Pulungan [redacted] wrote:

> Dear Metro Board:
>
> I support Item 11 and oppose the last minute attempt (Item 11.1) to derail the C Line Extension to Torrance by caving to a vocal few. Metro already owns the ROW, and we should not delay the project by years and spend an extra $700M to get worse ridership! Please support the majority of South Bay people, and the staff's recommendation, and vote no on 11.1. As I said before, as someone who works in aerospace, this project will be crucial to connecting job centers for such an important industry of LA to the rest of LA, enabling opportunities for people who work in aerospace and live around LA, who want to work in the South Bay's important aerospace industry. It is of national importance that this project gets going ASAP, due to these jobs in the area.
>
> I support Item 10 - please support staff's recommendation on the Modified Alternative 5 route for the Sepulveda Transit Corridor.
>
> I oppose Item 33 - SB-79 is law in California, and it makes Metro look absurd to ask for an exemption for L.A. County. In fact, if Metro embraced SB-79 and more housing was built around Metro stops, it would lead to higher ridership of the system. I recognize that there are concerns about voices opposed to housing that will now be opposed to transit, but I guarantee you, the same people against housing are already basically the same people opposed to transit projects.

Good evening,
I would like to express my support for Item 10, specifically selecting Modified Alternative 5 as the Locally Preferred Alternative (LPA) for the Sepulveda Transit Corridor Project. Choosing this alternative will have numerous benefits for the entire L.A. region, and I urge the Board to prioritize the best alternative for one of the most important transportation projects in recent history.

Alternative 5 will ensure fast, frequent, reliable transit connecting the Westside and Valley, with automated trains and better connections to the Metro G line, Metro ESFV Project, as well as Metrolink and the Pacific Surfliner.

Additionally, I would like to express my support for the approval of the Hybrid Alignment LPA for Item 11. I urge the board to reject Motion 11.1 by Director Mitchell to advance the Hawthorne Alignment. The Hawthorne alignment is far more expensive, and does not utilize the existing Right-Of-Way that Metro already owns. Selecting the Hybrid Alignment will ensure the South Bay gets the transit it deserves, utilizing existing freight corridors while using state-of-the-art safety technologies. Selecting the Hawthorne Alignment will lead to a large budget deficit and further delay the project with billions of missing funding.
Therefore, I urge the Board to approve the Hybrid Alignment and advance the C/K Line Southern Extension.

Thank you for the opportunity to comment.

Best,
Zyra Frias

Why do they need to go underground? Why not build a second story over the existing lane, an above ground tunnel? Like the one Elon Musk wants to do but just an easy one, on top, and a car lane on top of it. The train would be inside the tunnel and it would be silent up the neighborhood. Just a thought.

Council DIstrict 4 news and up

Dear Friends,

Anyone who has ever tried to get through the Sepulveda Pass knows how unpredictable it can be. Sometimes it's manageable. Sometimes it

isn't. And for too many Valley residents, the trip to the Westside can take an hour or more each way, and far longer for those using public transit.

In 2010, Los Angeles tried to fix the problem by widening the 405. We spent more than a billion dollars, lived through the construction, and ended up learning the same lesson again: adding lanes did not solve the traffic.

That's why the Sepulveda Transit Corridor, a proposed train line that would connect the Valley to the Westside through the Sepulveda Pass, matters so much to me. On Wednesday, Metro took a major step forward towards that goal when its Planning and Programming Committee approved the staff's recommendation for the "Locally Preferred Alternative" (LPA), which is the option that Metro determines best meets the project's goals, objectives, and community needs, based on technical analysis and public input. If approved, the LPA selected by the Metro Board becomes the basis for subsequent environmental analysis and design advancement.

Metro staff recommended a Modified Alternative 5, and I strongly believe that this recommendation delivers what Angelenos were promised: a fast, fully underground, high-capacity rail line connecting the San Fernando Valley to UCLA, Westwood, and the broader regional transit system, including the Expo Line and the new Purple Line. For residents of CD4, that means a trip that can take 40 to 90 minutes by car would take 18 minutes or less by rail. That's not a small improvement. It's a total reset.

For our district, this project is about access and opportunity. It means more reliable commutes for working families. Better access to jobs, education, and health care. Stronger connections between Valley neighborhoods and the rest of the city. And it means a real, world-class transit option that works for people who already rely on transit every day *and* for people who are tired of sitting on the 405 driving in

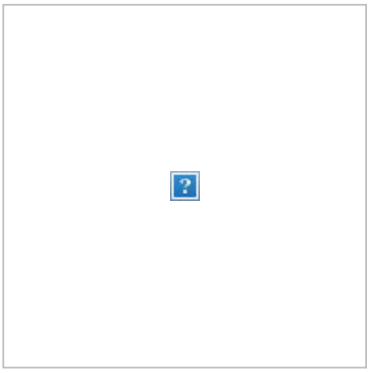
mind-numbing traffic.

It also means progress on issues our residents care deeply about: reducing climate pollution, creating good-paying jobs, and building infrastructure that actually meets the scale of Los Angeles' challenges. This is the kind of investment that strengthens our communities today and positions our city for the next century.

Metro has taken an important step—but the work is not done. The Metro Board still needs to hear from the people who live, work, and travel through our district. If you support the Sepulveda Transit Corridor, now is the time to speak up.

Please share your input by emailing the Metro Board Clerk at boardclerk@metro.net by January 22. Angelenos deserve a better answer than "just sit in traffic."

Warmly,



Nithya

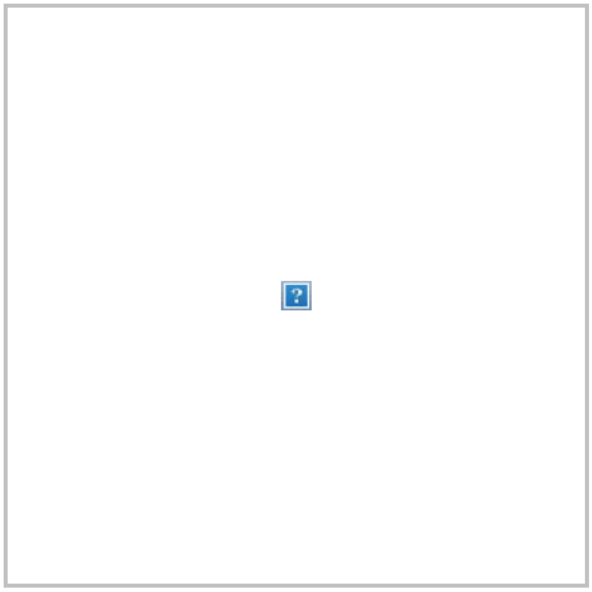
UPDATES FROM CITY HALL

ENGAGING ANGELENOS ON CHARTER REFORM



This past weekend, I joined Rewrite LA at the Japanese American National Museum for a critical conversation about reforming our City's Charter.

Charter reform offers us a rare opportunity to change how the City makes decisions that affect our everyday lives. And right now, we are inviting Angelenos into this process to make their voices heard. This begins with creating avenues for public engagement that are inclusive, transparent, and reflective of the diverse perspectives of Los Angeles residents.

I want to thank Rewrite LA who brought together

an assembly of eager community members and who are widening the circle and allowing Angelenos to actually see themselves in this process. For more information and to get involved, you can visit their website at rewritela.org.

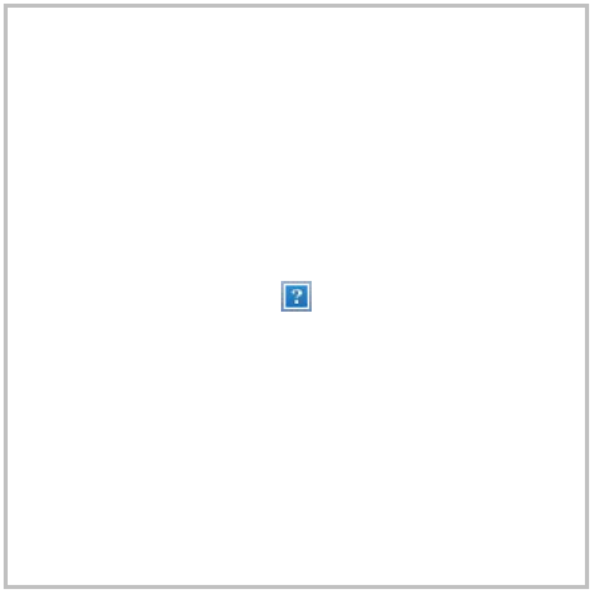
I also want to make sure you have information about upcoming meetings of the Los Angeles Charter Reform Commission, as your participation in these meetings is critical to help us build a city that best serves you. Below, you will find the remaining January Commission meetings and I encourage you to attend in-person, or submit public comment ahead of time by emailing reformLAcharter@lacity.org. My office will continue to keep you updated on important upcoming meetings and ways to engage. You can also sign up to receive regular updates from the Charter Reform Commission HERE.

Ad Hoc Committee Meeting
DATE: Saturday, January 17
TIME: 9:30am
LOCATION: Los Angeles City Hall, Room 1010

Charter Reform Commission Meeting: Town Hall Study Session
DATE: Wednesday, January 21
TIME: 3pm
LOCATION: Van Nuys City Hall, 14410 Sylvan St # 215, Van Nuys, CA 91401

IN THE DISTRICT

RINGING IN THE NEW YEAR WITH A COMMUNITY HIKE



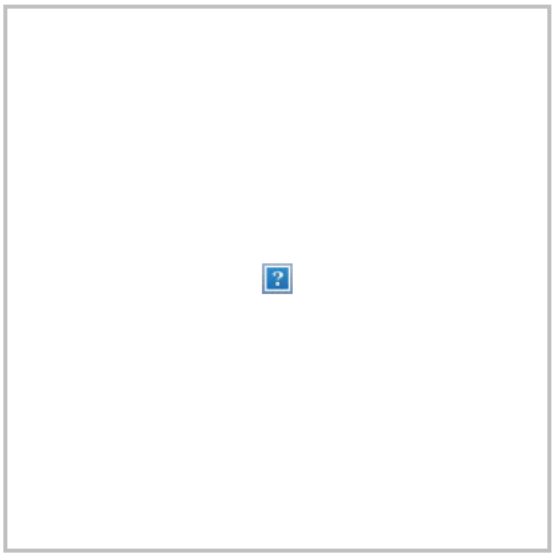
Council District 4 showed up in full force last Saturday to celebrate the first weekend of 2026! In partnership with Charles Fleming, author of *"Secret Stairs: A Walking Guide to the Historic Staircases of Los Angeles"* and tour guide extraordinaire, my team helped lead an unforgettable trek through the Los Feliz hills and up to the Griffith Observatory. It was a uniquely LA start to the new year: 70 degree weather and a gorgeous hike!

We kicked things off at Franklin's Cafe & Market and wound our way through hidden neighborhood gems and up some truly remarkable staircases that most of us never knew existed. Charles brought the City's secrets to life at every turn! After catching our breath – those stairs are no joke – we slipped into Griffith Park through a little-known residential entrance. A hiker paused in front of what looked like a light pole with a speaker atop, and Charles shared that it was no ordinary light pole, but actually a Cold War-era air raid siren. A prime example of history hiding in plain sight.

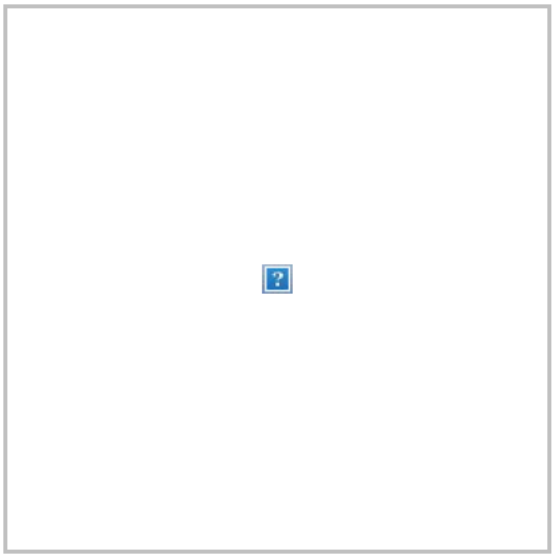
At long last we found ourselves just below the Griffith Observatory, celebrating with perfectly clear views all the way to the ocean.

Exceptional weather aside, this event was a perfect reminder of just how magical this city is. Strangers left friends, we all walked away with uniquely LA trivia to share, and we took the time to pause and connect with this beautiful city we call home.

If you were unable to join us Saturday, we'll be hosting more events in the near-future and would love to see you there!



MEETING WITH NEIGHBORS IN ENCINO FOR A LIVING ROOM CHAT



As you've heard me say many times before, connecting with residents is one of the best parts of this job, and it's always a pleasure to be welcomed into a living room or backyard to

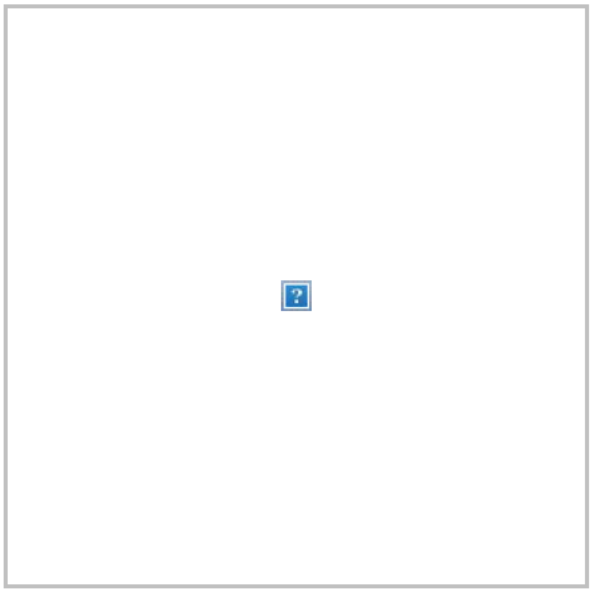
meet with neighbors. This past weekend, Laure Stevens opened up her Encino home to us, bringing together about 20 neighbors for an engaged conversation on the issues that matter most to our community.

We had an in-depth discussion about homelessness and our ongoing outreach and oversight work, as well as the housing crisis and how it is imperative that we build more housing in Los Angeles to create a resilient city for the future. Traffic safety was also top of mind for many attendees. Traffic has become much worse in recent years, particularly in the Hills, and I know many residents are feeling unsafe walking in their own neighborhoods. Laure has been a true leader on this issue and was instrumental in getting the Encino Hills Traffic Calming Plan off the ground, which we hope will improve safety for many years to come. You can find the latest updates on the project on our website.

Thank you Laure for graciously inviting us into your home and everyone who spent a busy Saturday afternoon with us. These conversations are essential to understanding what our neighborhoods need and how we can work together to address the challenges we face.

UPCOMING EVENTS

STUDIO CITY NEIGHBORHOOD COUNCIL COMMUNITY CLEANUP EVENT | MORE INFO



Join the Studio City Neighborhood Council for a community cleanup event this Sunday, January 18 from 8:30-11am. Everything will be provided – grabbers, vests, gloves, and trash bags – just bring yourself! Refreshments will be provided after the event.

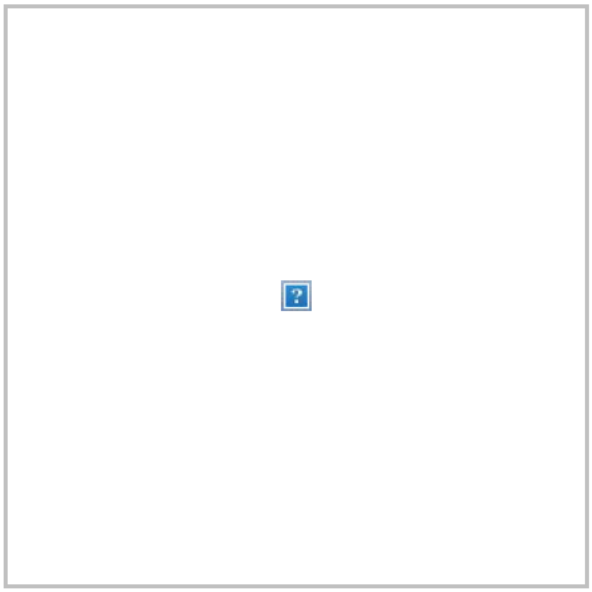
DATE: Sunday, January 18
TIME: 8:30 - 11:00am
LOCATION: meet at Vitello's Restaurant, 4349 Tujunga Ave, Studio City, 91604

Registration is mandatory – click HERE to RSVP!

2026 GREATER LOS ANGELES HOMELESS COUNT | JANUARY 20 - JANUARY 22 | MORE INFO

The Los Angeles homeless count is one of the greatest tools we have in assessing the progress we are making as a City toward solving this humanitarian crisis. Conducted over three nights every January, the homeless count provides critical data to help inform policy, secure resources, and deliver services where they are most needed.

Council District 4 is once again hosting the Studio City homeless count at the First Christian Church of North Hollywood on Tuesday, January 20. To count with CD4 staff, be sure to select "Studio City" in the location drop-down. To count closer to home, select the neighborhood that works best for you!



I am so grateful to everyone volunteering their time over the course of these three nights to help us work toward a Los Angeles where no one is without a place to live.

DATE: Tuesday, January 20 - Thursday, January 22
TIME: 7:30PM
LOCATION: Click HERE to sign up for a specific location!

RESOURCES & FORUMS

HELP SHAPE LA'S TRANSPORTATION FUTURE | MORE INFO

The City of Los Angeles is developing its first Mobility Action Plan (MAP), which will guide how LA invests in streets, sidewalks, transit, biking, and walking for the next 5-20 years. Your feedback will guide how the City prioritizes

transportation investments. By sharing your experiences and priorities, you'll help us plan for a safer, more accessible, and connected transportation system for everyone.

LASAN'S SORT-LA GUIDE FOR WASTE DISPOSAL | MORE INFO

LA Sanitation and Environment (LASAN) has a new tool to help you properly sort your household waste: SORT-LA. SORT stands for *Separating Organics, Recycling, and Trash*, and is intended to help answer any questions you may have about how to dispose of an item. Type in the name of a household item, and the site will tell you which bin it goes into, or if the item requires special disposal outside of the LASAN three-bin system.

Click HERE to get started!

LADWP LANDSCAPE EFFICIENCY ASSISTANCE PROGRAM | MORE INFO

Looking ahead to a sustainable new year, the Los Angeles Department of Water and Power (LADWP) encourages eligible customers to take advantage of its no-cost Landscape Efficiency Assistance Program (LEAP). The program helps single-family residential customers in Disadvantaged Communities (DACs) transform their front yards to water-saving gardens that reduce their outdoor water use, lower their water bills, and beautify their neighborhoods — all at no cost.

To qualify, participants must meet the following requirements:

- Be a single-family residential LADWP customer living in a Disadvantaged Community, as defined by DWR
- Have a living (green) front lawn; transformations apply to **front yards only**
- Turf removal area must be between **1,000 to 3,000 square feet**
- Property must have **rain gutters installed in the front**

- Applicant must be the **property owner** or have documented permission from the owner

LEAP funds are limited. Customer participation is on a first-come, first-served basis until funds are exhausted. For more information and to check program eligibility, visit ladwp.com/LEAP.

PUBLIC WRITTEN COMMENT for Metro Board Meeting Wed January 14, 2026
ITEM 10: SEPULVEDA TRANSIT CORRIDOR
SUPPORT for MODIFIED ALTERNATIVE FIVE with Line E/Expo Connection at Bundy not Sepulveda

Dear Metro Board,
Congratulations on the progress on evaluating alternatives for the Sepulveda Corridor. It is exciting to see a commitment to a sustainable alternative to driving to travel between the Westside and the San Fernando Valley. After reviewing the alternatives in the Summary of Alternatives and the Staff Report there appear to be compelling reasons to support Alternative 5 with the Modifications suggested by Metro Staff. However, as an urban planner who facilitated numerous First/Last Mile Planning Projects for Metro, I would urge you to seriously consider the possibility of making the connection to the Expo Line at Bundy rather than Sepulveda, and using the Bundy corridor as the start of planning for an eventual rail extension to LAX which would serve the intense development of the Westside.

Among the key existing and proposed developments this Bundy/Exposition Station connection with the Sepulveda Corridor rail and/or bus corridor would serve are:

-The West Edge Development with Riot Games and high density housing at Olympic and Bundy
-The Bundy/Exposition Transit Village Development currently under construction
- The Ocean Park Boulevard Big Blue Bus Line and planned mixed use housing and commercial planned at the Santa Monica Business Park, with the first phase currently proposed near Clover Park
- A major regional park with a wide variety of recreational and cultural uses, possibly including substantial affordable workforce housing at the 192 acre site of the Santa Monica Airport
- Santa Monica College's Bundy Campus, with planned housing for 175 students
- Mar Vista's vibrant Venice Boulevard Neighborhood
- Playa Vista's new entertainment technology jobs and housing development
- Loyola Marymount University
- Westchester Retail Areas
- LAX

After analyzing First Last Mile Connections to both the Van Nuys Station and the Expo Stations, as well as a wide range of other stations, I found that the ability to site a station AWAY from heavy freeway traffic, with good pedestrian, bicycle/scooter, transit and street connections to the surrounding area, creates a much more attractive and safer connection for users. The station options very near Sepulveda have a significant disadvantage over the N-S connection on Bundy located just one stop away. I hope you will consider a slight modification to Alternative 5 to

incorporate the Expo Line connection at Bundy rather than Sepulveda. A major project such as the Sepulveda Corridor should be planned strategically to help ease the extreme congestion in the Westside and to reinforce the sustainable alternatives for station access.

Thanks for your time and attention.

> Just wanted to send a quick recap to everyone.

Jason talked to Boris and I about the Sepulveda transit corridor that is on the agenda for Metro's Planning and Programming Committee tomorrow at 11 AM and on the board's agenda for next Thursday.

As you may already know, Metro staff is recommending a modified alternative 5, which would be a major improvement for the West side and anyone who commutes along the 405. Jason, along with other city staff and advocates, is recommending a push for a connection at Expo/Bundy rather than Expo/Sepulveda, as it would greatly benefit the future airport site, SMC students, Santa Monica residents,... and still allow for a connection to the D line and a station at UCLA, while keeping a future LAX connection viable. It would also enable more connections through walkable neighborhoods than the current 405 alignment that they recommend.

Jason, feel free to add if I missed anything important or got anything wrong.

If you'd like to show support for this option, we'd recommend emailing the committee tonight since the meeting is tomorrow morning. You can use the Streets For All template that Jason linked to, and simply update the email to add your thoughts. You can also email the board directly for their meeting next Thursday.

If you feel strongly about this and have the time, you can also go there in person.

We also briefly touched on proposed business park projects. Staff is discussing mobility options in the area, considering a variety of possibilities at both the business park and the airport. Boris asked about the feasibility of a master plan to ensure cohesion among the different projects, which Jason will discuss with planning staff.

Jason and Boris, let me know if I missed anything.

And thanks for the meeting and all the work, Jason!

Caro

You may be aware that Metro is having a vote about selecting a locally preferred alternative to study for this project on Wednesday, January 14. Please see details attached from Streets for All about how to participate in that meeting. Tomorrow, I will share some thoughts about a modification to advocate for, which is for the project to ultimately connect to the E Line at Bundy as opposed to Sepulveda, so as to set up the future phase to LAX with the ability to have a stop near the SM Airport area. Looking forward to connecting with you and I will try to answer your other questions tomorrow as well.

Thanks for this opportunity — I wonder if there are any materials, maps, project summaries, relevant city plans etc that we might look at before we have the meeting to help formulate our comments? Anyone have an idea of timeframes or likelihood for this project?

I find Ocean Park currently to be a scary street to bike on. I wonder what this project suggests for bike plan amendments and connections to Grant Elem.

More and more, with each year, I become more interested in senior-oriented shuttles. Are units/priced as Car-free/shared vehicle homes? (senior maybe?) When my parents lived in SF we used the car share located in their garage and so that, together with Silver-ride service and cabs met the need.

Side thought: Jason, is anyone thinking of the number of pets anticipated for large developments? I would like to see a development of this size include a dog area (even private and privately maintained) that diverts polluted water/rain water to the sewage system rather than the ocean.

Laurene

Great Park-adjacent housing. This only occupies a fraction of the business park, so a lot more could be built.

More parking is proposed than I'd like to see, but then the location is kind of transit-isolated. That seems problematic if the whole business park achieves this level of density. I wonder what mobility/connectivity solutions are possible to address this. Shuttle service to Expo? Increase bus service? Protected bikeways to transit links (Europe really takes advantage of bike-to-transit; this is an untapped resource here).

Ground level walkability looks OK, but 28th St. would benefit from an ambitious ped and bike-oriented design as the area builds out. Ocean Park Blvd as well, for that matter. It's still 4 lanes in this area; the road diet west of here could be extended.

To Whom This May Concern,
My name is Zachary Zysk. I am a resident of Long Beach and work in Culver City, meaning I often use the 405 to get to work. I'm a transplant, like many in LA, and every stereotype, legend, and joke about the 405 being a nightmare with traffic has been proven true in various ways. The 405 is obviously one of LA's most crucial routes and has influenced traffic patterns so much that we're even having this debate about transit alternatives (and, quite frankly, because it's at capacity). The K Line extension to Torrance and the Sepulveda subway would be a fantastic way to get people off this road and still travel to where that freeway can take them. Speaking more personally, the K Line has been a game changer getting to LAX the last few times I've flown back to the east coast. I know many other people in Long Beach feel the same way. But going all the way to the Redondo Beach stop is too far just to go the last few miles into the airport. The Torrance extension would certainly be more convenient, and I know my fellow residents would start to change their minds about driving the full distance to the airport. If anything, this extension would do quite a bit to at least meet us halfway. And if this project is approved, maybe the K Line can come all the way down to Long Beach, filling a crucial gap in the Metro system and taking more cars off the road. And that's not to mention the additional connections via E Line in Crenshaw to West LA, where many people travel to using the 405. By providing this alternative mode to get around LA (as well as the Sepulveda subway), we can maybe begin to do away with these stereotypes, legends, and jokes about the 405, and create a new narrative about traffic in LA.
Thank you for your time.
-Zachary Zysk

Agenda Item 10: FOR

Dear Metro Board of Directors,

As a UCLA student, I strongly urge the Metro Board to proceed with Modified Alternative 5 as the Locally Preferred Alternative (LPA) for the Sepulveda Transit Corridor.

I am FOR Agenda Item 10: Approve the Locally Preferred Alternative (Modified Alt 5) for the Sepulveda Transit Corridor. This heavy rail option will best serve UCLA students and residents of the San Fernando Valley and West LA!

I support the determination by Metro staff that Modified Alternative 5 is the best alternative to serve the needs of this Corridor. It includes (1) a direct stop at UCLA Gateway Plaza, (2) direct connections to other Metro lines, (3) stations placed where students and residents will go, and (4) frequent trains with low headways. I hope that Metro can expedite the environmental review of the Sepulveda Line to speed up construction, reduce costs, and ensure that we can benefit from this Line as soon as possible.

Thank you for voting to transform public transportation for Los Angeles.

I have only ever been to the vally one time and because it took 3 hours by public transit. I really want to be able to see more of LA and feel more connected to this city that I live in but it's really difficult without a car. This would make the city much more accessable.

As a student, buying a car is not feasible given the costs, bus routes along the 405 are often extremely slow and take twice as long as a personal vehicle, forcing me to use rideshare apps which can be costly. Having a subway line along the planned route would be life-altering and would allow me to find work opportunities much further away from campus in addition to more recreational freedom.

I support the determination by Metro staff that Modified Alternative 5 is the best alternative to serve the needs of this Corridor. It includes (1) a direct stop at UCLA Gateway Plaza, (2) direct connections to other Metro lines, (3) stations placed where students will go, and (4) frequent trains with low headways. Agenda Item 10: FOR

Dear Metro Board of Directors,

As a UCLA student, I strongly urge the Metro Board to proceed with Modified Alternative 5 as the Locally Preferred Alternative (LPA) for the Sepulveda Transit Corridor.

I am FOR Agenda Item 10: Approve the Locally Preferred Alternative (Modified Alt 5) for the Sepulveda Transit Corridor. This heavy rail option will best serve UCLA students and residents of the San Fernando Valley and West LA!

I have struggled to receive healthcare services and balance my duties as a student because of my doctor being located north of the 405. Alternative 5 would dramatically change my life.

I support the determination by Metro staff that Modified Alternative 5 is the best alternative to serve the needs of this Corridor. It includes (1) a direct stop at UCLA Gateway Plaza, (2) direct connections to other Metro lines, (3) stations placed where students will go, and (4) frequent trains with low headways. I hope that Metro can expedite the environmental review of the Sepulveda Line to speed up construction, reduce costs, and ensure that students at UCLA can benefit from this Line as soon as possible.

I am also FOR Agenda Item 11: the South Bay extension for the K Line should follow the existing Metro Right of Way. Everyone will greatly benefit from a fully connected, comprehensive rail network that ONLY the ROW option can deliver quickly and cost effectively.

Thank you for voting to transform public transportation for UCLA and beyond.

I am FOR Agenda Item 10: Approve the Locally Preferred Alternative (Modified Alt 5) for the Sepulveda Transit Corridor. This heavy rail option will best serve UCLA students and residents of the San Fernando Valley and West LA!

As someone who works in Burbank and Van Nuys, I'm constantly stuck in traffic along the 405. This would be gamechanging for me, and many other students who commute to/from UCLA from the Valley.

I support the determination by Metro staff that Modified Alternative 5 is the best alternative to serve the needs of this Corridor. It includes (1) a direct stop at UCLA Gateway Plaza, (2) direct connections to other Metro lines, (3) stations placed where students will go, and (4) frequent trains with low headways. Agenda Item 10: FOR
Agenda Item 11: FOR

Dear Metro Board of Directors,

As an immigrant (from Australia), and a resident of Westwood of the past two years, I strongly urge the Metro Board to proceed with Modified Alternative 5 as the Locally Preferred Alternative (LPA) for the Sepulveda Transit Corridor.

I am FOR Agenda Item 10: Approve the Locally Preferred Alternative (Modified Alt 5) for the Sepulveda Transit Corridor. This heavy rail option will best serve commuters throughout the San Fernando Valley and West LA. I am also FOR Agenda Item 11: the South Bay extension for the K Line should follow the existing Metro Right of Way.

I believe that a city is made a city rather than a loosely affiliated collection of suburbs by the strength of its public transit. It is only by connecting the people of different neighbourhoods that a city can develop, and it is only through rail networks that this is possible for an area the size of Los Angeles. I understand that LA has unique difficulties that make the construction of this rail network a heavy undertaking. However, I believe that LA more than any other major American city needs this network to truly thrive.

I support the determination by Metro staff that Modified Alternative 5 is the best alternative to serve the needs of this Corridor. It includes (1) a direct stop at UCLA, (2) direct connections to other Metro lines, (3) stations placed where people will go, and (4) frequent trains with low headways. I hope that Metro can expedite the environmental review of the Sepulveda Line to speed up construction, reduce costs, and ensure that people can benefit from this Line as soon as possible.

Thank you for voting to transform public transportation for the Valley and Los Angeles.

At the beginning of this school year I had to commute from the San Fernando valley to UCLA and often times, it took well over an hour to travel 10-15 miles. This project would be extremely beneficial to students like me who cannot live on campus and need a reliable and efficient mode of transportation to class.

Thank you for voting to transform public transportation for Los Angeles.

As a UCLA student, I strongly urge the Metro Board to proceed with Modified Alternative 5 as the Locally Preferred Alternative (LPA) for the Sepulveda Transit Corridor.

I am FOR Agenda Item 10: Approve the Locally Preferred Alternative (Modified Alt 5) for the Sepulveda Transit Corridor. This heavy rail option will best serve UCLA students and residents of the San Fernando Valley and West LA!

I support the determination by Metro staff that Modified Alternative 5 is the best alternative to serve the needs of this Corridor. It includes (1) a direct stop at UCLA Gateway Plaza, (2) direct connections to other Metro lines, (3) stations placed where students will go, and (4) frequent trains with low headways. I hope that Metro can expedite the environmental review of the Sepulveda Line to speed up construction, reduce costs, and ensure that students at UCLA can benefit from this Line as soon as possible.

Thank you for voting to transform public transportation for UCLA and beyond.

I hope that Metro can expedite the environmental review of the Sepulveda Line to speed up construction, reduce costs, and ensure that we can benefit from this Line as soon as possible.

As a student who relies entirely on public transportation to access internship, work, shadowing, and volunteer opportunities, this development would make them even more accessible. Los Angeles is far too car-reliant as it stands and this makes opportunities highly inaccessible to those who can't buy one. If access to transit was easier I would also consider living further away from campus where rent is significantly cheeper, saving me significant money.

Thank you for voting to transform public transportation for Los Angeles.

Agenda Item 10: FOR

Dear Metro Board of Directors,

As a recent UCLA alumni, I strongly urge the Metro Board to proceed with Modified Alternative 5 as the Locally Preferred Alternative (LPA) for the Sepulveda Transit Corridor.

I am FOR Agenda Item 10: Approve the Locally Preferred Alternative (Modified Alt 5) for the Sepulveda Transit Corridor. This heavy rail option will best serve UCLA students and residents of the San Fernando Valley and West LA!

During my four years at UCLA from 2021-25, I often relied on the bus system to get around Los Angeles, but felt increasingly frustrated that accessing much of the city required the use of a car. This reality limited me and many other students to housing immediately surrounding the campus in Westwood, which is has the concentration of some of the highest rents in the country. It's unquestionable that the existence of efficient, well-connected transit is necessary to elevate one of the world's most vibrant cities from one of congestion to one of access for it's everyday residents--students, families, and workers alike. With the access this Modified Alternative 5 would provide, students will have the option to live further away from campus, alleviating longstanding socioeconomic stresses such as rent burden, housing insecurity, and food insecurity. The development of this corridor is undoubtedly an intersectional issue--Metro exists to serve all the residents of the city, not just the wealthy who refuse to see public infrastructure flourish for the sake of their own perceived convenience.

I support the determination by Metro staff that Modified Alternative 5 is the best alternative to serve the needs of this Corridor. It includes (1) a direct stop at UCLA Gateway Plaza, (2) direct connections to other Metro lines, (3) stations placed where students will go, and (4) frequent trains with low headways. I hope that Metro can expedite the environmental review of the Sepulveda Line to speed up construction, reduce costs, and ensure that students at UCLA can benefit from this Line as soon as possible.

Thank you for voting to transform public transportation for UCLA and beyond.

Best regards,
Joanne Sarsam

Dear Metro Board of Directors,

As a resident in the Westwood area for over 7 years, I strongly urge the Metro Board to proceed with Modified Alternative 5 as the Locally Preferred Alternative (LPA) for the Sepulveda Transit Corridor.

I am FOR Agenda Item 10: Approve the Locally Preferred Alternative (Modified Alt 5) for the Sepulveda Transit Corridor. This heavy rail option will best serve commuters throughout the San Fernando Valley and West LA.

As an Angeleno and resident I love this city with all my heart and want only the best for it which includes improving the traffic situation that every one of us who grows up here learns to tolerate. This city is a beautiful place that could only serve to be improved by making transportation easier and affordable for all who live here. The environmental impact would serve not only our collective health but that of natural beauty we all adore in California.

I support the determination by Metro staff that Modified Alternative 5 is the best alternative to serve the needs of this Corridor. It includes (1) a direct stop at UCLA, (2) direct connections to other Metro lines, (3) stations placed where people will go, and (4) frequent trains with low headways. I hope that Metro can expedite the environmental review of the Sepulveda Line to speed up construction, reduce costs, and ensure that people can benefit from this Line as soon as possible.

Thank you for voting to transform public transportation for the Valley and Los Angeles.

Thank you for your consideration,
Christian Argumedo

In my first two years at UCLA, I heavily relied on the Metro to get around town. However, when it came to volunteering at local hospitals or traveling to the downtown, my trips would take hours. After seeing the benefit of having a train line so close to campus at UCSD, I believe it was be in our best interest to expedite the construction of this metro line.

I don't usually reach out about policy decisions like this, but I'm going out of my way to write because this project genuinely matters to me. As a UCLA student, I spend an enormous amount of time sitting in traffic on the 405—whether I'm trying to get home or get to LAX—and it's exhausting and unnecessary. The Sepulveda transit line would be transformative, not just for me but for countless students, workers, and families who rely on this corridor every day. Like many others, I would love to see this finally happen: a faster, cleaner, and more reliable way to move through Los Angeles without being stuck in gridlock.

Thank you for voting to transform public transportation for Los Angeles.

Dear Metro Board of Directors,

As a UCLA student, I strongly urge the Metro Board to proceed with Modified Alternative 5 as the Locally Preferred Alternative (LPA) for the Sepulveda Transit Corridor.

I am FOR Agenda Item 10: Approve the Locally Preferred Alternative (Modified Alt 5) for the Sepulveda Transit Corridor. This heavy rail option will best serve UCLA students and residents of the San Fernando Valley and West LA!

I support the determination by Metro staff that Modified Alternative 5 is the best alternative to serve the needs of this Corridor. It includes (1) a direct stop at UCLA Gateway Plaza, (2) direct connections to other Metro lines, (3) stations placed where students will go, and (4) frequent trains with low headways. I hope that Metro can expedite the environmental review of the Sepulveda Line to speed up construction, reduce costs, and ensure that students at UCLA can benefit from this Line as soon as possible.

Thank you for voting to transform public transportation for UCLA and beyond.

Agenda Item 10: FOR

Dear Metro Board of Directors,

As a UCLA alumna and resident of the San Fernando Valley, I strongly urge the Metro Board to proceed with Modified Alternative 5 as the Locally Preferred Alternative (LPA) for the Sepulveda Transit Corridor. I support the Sepulveda Transit Corridor for UCLA students as I struggled with transportation to UCLA from my home in North Hollywood for the entirety of my 4 years at UCLA.

I am FOR Agenda Item 10: Approve the Locally Preferred Alternative (Modified Alt 5) for the Sepulveda Transit Corridor. This heavy rail option will best serve UCLA students and residents of the San Fernando Valley and West LA!

I support the determination by Metro staff that Modified Alternative 5 is the best alternative to serve the needs of this Corridor. It includes (1) a direct stop at UCLA Gateway Plaza, (2) direct connections to other Metro lines, (3) stations placed where students will go, and (4) frequent trains with low headways. I hope that Metro can expedite the environmental review of the Sepulveda Line to speed up construction, reduce costs, and ensure that students at UCLA can benefit from this Line as soon as possible.

I am grateful to have the opportunity to advocate for transportation for incoming UCLA students. Thank you for voting to transform public transportation for UCLA and beyond.

Dear Metro Board of Directors,

As a UCLA student, I strongly urge the Metro Board to proceed with Modified Alternative 5 as the Locally Preferred Alternative (LPA) for the Sepulveda Transit Corridor.

I am FOR Agenda Item 10: Approve the Locally Preferred Alternative (Modified Alt 5) for the Sepulveda Transit Corridor. This heavy rail option will best serve UCLA students and residents of the San Fernando Valley and West LA!

I support the determination by Metro staff that Modified Alternative 5 is the best alternative to serve the needs of this Corridor. It includes (1) a direct stop at UCLA Gateway Plaza, (2) direct connections to other Metro lines, (3) stations placed where students will go, and (4) frequent trains with low headways. I hope that Metro can expedite the environmental review of the Sepulveda Line to speed up construction, reduce costs, and ensure that students at UCLA can benefit from this Line as soon as possible.

Thank you for voting to transform public transportation for UCLA and beyond.

Agenda Item 10: FOR

Dear Metro Board of Directors,

As a UCLA student, I strongly urge the Metro Board to proceed with Modified Alternative 5 as the Locally Preferred Alternative (LPA) for the Sepulveda Transit Corridor.

I am FOR Agenda Item 10: Approve the Locally Preferred Alternative (Modified Alt 5) for the Sepulveda Transit Corridor. This heavy rail option will best serve UCLA students and residents of the San Fernando Valley and West LA!

As a transfer student, I relied heavily on public transportation options to commute to and from my prior college, and I would have loved an option like this. My previous commute was over an hour on the bus, and a heavy rail option would have been highly beneficial to me.

I support the determination by Metro staff that Modified Alternative 5 is the best alternative to serve the needs of this Corridor. It includes (1) a direct stop at UCLA Gateway Plaza, (2) direct connections to other Metro lines, (3) stations placed where students will go, and (4) frequent trains with low headways. Los Angeles has all the potential to be a transit city. This is what the original founders of the city had in mind. A getaway that starkly contrasted from the congestion of the east coast cities. This proposal moves us further towards this vision so that we can make this city more accessible for everyone.

I am also FOR Agenda Item 11: the South Bay extension for the K Line should follow the existing Metro Right of Way. Everyone will greatly benefit from a fully connected, comprehensive rail network that ONLY the ROW option can deliver quickly and cost effectively.

Agenda Item 10: FOR
Agenda Item 11: FOR

Dear Metro Board of Directors,

As a UCLA student, I strongly urge the Metro Board to proceed with Modified Alternative 5 as the Locally Preferred Alternative (LPA) for the Sepulveda Transit Corridor.

I am FOR Agenda Item 10: Approve the Locally Preferred Alternative (Modified Alt 5) for the Sepulveda Transit Corridor. This heavy rail option will best serve UCLA students and residents of the San Fernando Valley and West LA!

I support the determination by Metro staff that Modified Alternative 5 is the best alternative to serve the needs of this Corridor. It includes (1) a direct stop at UCLA Gateway Plaza, (2) direct connections to other Metro lines, (3) stations placed where students will go, and (4) frequent trains with low headways. I hope that Metro can expedite the environmental review of the Sepulveda Line to speed up construction, reduce costs, and ensure that students at UCLA can benefit from this Line as soon as possible.

I am also FOR Agenda Item 11: the South Bay extension for the K Line should follow the existing Metro Right of Way. As more students commute to campus, and as UCLA expands to the South Bay, everyone will greatly benefit from a fully connected, comprehensive rail network that ONLY the ROW option can deliver quickly and cost effectively.

Thank you for voting to transform public transportation for UCLA and beyond.

Agenda Item 10: FOR
Agenda Item 11: FOR

Dear Metro Board of Directors,

As a UCLA graduate, I strongly urge the Metro Board to proceed with Modified Alternative 5 as the Locally Preferred Alternative (LPA) for the Sepulveda Transit Corridor.

I am FOR Agenda Item 10: Approve the Locally Preferred Alternative (Modified Alt 5) for the Sepulveda Transit Corridor. This heavy rail option will best serve UCLA students and residents of the San Fernando Valley and West LA!

I support the determination by Metro staff that Modified Alternative 5 is the best alternative to serve the needs of this Corridor. It includes (1) a direct stop at UCLA Gateway Plaza, (2) direct connections to other Metro lines, (3) stations placed where students and residents will go, and (4) frequent trains with low headways. I hope that Metro can expedite the environmental review of the Sepulveda Line to speed up construction, reduce costs, and ensure that we can benefit from this Line as soon as possible.

While I am no longer a student at UCLA, I commute regularly from the San Fernando Valley to West Los Angeles, and having a rail option will significantly improve the quality of living for hundreds of thousands of individuals who live and work across LA. When I was a student in 2017, I found myself in a car totaling accident during rush hour commuting back home in Sherman Oaks from the Westwood campus. I strongly believe that a rail option will not only decrease commute times by preventing further traffic-causing accidents, but also improve public safety while stimulating economic growth for businesses in the area.

I am also FOR Agenda Item 11: the South Bay extension for the K Line should follow the existing Metro Right of Way. Everyone will greatly benefit from a fully connected, comprehensive rail network that ONLY the ROW option can deliver quickly and cost effectively.

Thank you for voting to transform public transportation for Los Angeles.

I attended UCLA way back in the '90s and the idea of commuting seemed unthinkable. A few years after graduation, I moved to Van Nuys. It's mind boggling how easy it would be to commute from the Valley to school if this subway gets built. Not to mention having an easy route to LAX, which was another challenge as a student in the 90s. This route will be such a boon for LA residents.

I am also FOR Agenda Item 11: the South Bay extension for the K Line should follow the existing Metro Right of Way. Everyone will greatly benefit from a fully connected, comprehensive rail network that ONLY the ROW option can deliver quickly and cost effectively.

Thank you for voting to transform public transportation for Los Angeles.

I am FOR Agenda Item 10: Approve the Locally Preferred Alternative (Modified Alt 5) for the Sepulveda Transit Corridor. This heavy rail option will best serve the residents of the San Fernando Valley and West LA!

I support the determination by Metro staff that Modified Alternative 5 is the best alternative to serve the needs of this Corridor. It includes (1) a direct stop at UCLA Gateway Plaza, (2) direct connections to other Metro lines, (3) stations placed where students and residents will go, and (4) frequent trains with low headways. I hope that Metro can expedite the environmental review of the Sepulveda Line to speed up construction, reduce costs, and ensure that we can benefit from this Line as soon as possible.

Extensive and reliable transit takes people off the road and reduces traffic and pollution!

I am also FOR Agenda Item 11: the South Bay extension for the K Line should follow the existing Metro Right of Way. Everyone will greatly benefit from a fully connected, comprehensive rail network that ONLY the ROW option can deliver quickly and cost effectively.

Thank you for voting to transform public transportation for Los Angeles!!

Agenda Item 10: FOR
Agenda Item 11: FOR

Dear Metro Board of Directors,

As a current UCLA student, I urge the Metro Board to proceed with Modified Alternative 5 as the Locally Preferred Alternative (LPA) for the Sepulveda Transit Corridor. Having worked in real estate in Bel Air, and having seen the respective arguments for and against the metro, I staunchly side with the people FOR agenda items 10 and 11. We cannot let corporate greed and an already difficult real estate market interfere with the needs of our working class civilians and students.

I am FOR Agenda Item 10: Approve the Locally Preferred Alternative (Modified Alt 5) for the Sepulveda Transit Corridor. This heavy rail option will best serve UCLA students and residents of the San Fernando Valley and West LA!

I support the determination by Metro staff that Modified Alternative 5 is the best alternative to serve the needs of this Corridor. It includes (1) a direct stop at UCLA Gateway Plaza, (2) direct connections to other Metro lines, (3) stations placed where students will go, and (4) frequent trains with low headways. I hope that Metro can expedite the environmental review of the Sepulveda Line to speed up construction, reduce costs, and ensure that students at UCLA can benefit from this Line as soon as possible.

I am also FOR Agenda Item 11: the South Bay extension for the K Line should follow the existing Metro Right of Way. As more students commute to campus, and as UCLA expands to the South Bay, everyone will greatly benefit from a fully connected, comprehensive rail network that ONLY the ROW option can deliver quickly and cost effectively.

Thank you for voting to transform public transportation for UCLA and beyond.

I wish there was an easy way to get to the valley to visit friends and family! This is everything I hoped for to accomplish that. In addition, I'm excited for the connection to LAX because it finally puts LA on par with other major cities' transit.

I am also FOR Agenda Item 11: the South Bay extension for the K Line should follow the existing Metro Right of Way. Everyone will greatly benefit from a fully connected, comprehensive rail network that ONLY the ROW option can deliver quickly and cost effectively.

We all know the dreaded traffic on the Sepulveda pass and it's about time we really consider an underground heavy rail solution for this issue that's plagued LA for ages. Living near the Yellow line, this would expand my transit options by so much, and I'm already thankful for the ability to take the train to work downtown.

I am also FOR Agenda Item 11: the South Bay extension for the K Line should follow the existing Metro Right of Way. Everyone will greatly benefit from a fully connected, comprehensive rail network that ONLY the ROW option can deliver quickly and cost effectively.

I'm from Ventura County, so I either take the train or drive to school. Whether on the 761 bus from the Van Nuys station or on the 405 freeway itself, my life has been dominated by the congested Sepulveda Pass. The Sepulveda Line would change the lives of anyone remotely like me. A reliable, consistent option that will end up being the fastest travel route by a landslide during rush hours. The 405 Freeway frequently goes viral for the congestion it accumulates; it's frankly embarrassing that LA does not have any viable transit option to bypass such a heavily trafficked road, especially since Sepulveda Blvd will not be getting bus-only lanes anytime soon. If you care about your constituents, if you care about actually providing a robust transit network to one of the biggest employers in Los Angeles, the Sepulveda Line Modified Alternative 5 would be no question.

I am also FOR Agenda Item 11: the South Bay extension for the K Line should follow the existing Metro Right of Way. Everyone will greatly benefit from a fully connected, comprehensive rail network that ONLY the ROW option can deliver quickly and cost effectively.

I would love if there was an easier way to get to LAX from UCLA which is why I'm in support of this project. Going to the airport is incredibly expensive if you are in a rush and I would love if there was a reliable, efficient, and accessible way to travel within LA. It's time for LA to catch up to the Bay Area and have a better more efficient Metro system!!!

I am also FOR Agenda Item 11: the South Bay extension for the K Line should follow the existing Metro Right of Way. Everyone will greatly benefit from a fully connected, comprehensive rail network that ONLY the ROW option can deliver quickly and cost effectively.

I am FOR Agenda Item 10: Approve the Locally Preferred Alternative (Modified Alt 5) for the Sepulveda Transit Corridor. This heavy rail option will best serve UCLA students and residents of the San Fernando Valley and West LA!

I support the determination by Metro staff that Modified Alternative 5 is the best alternative to serve the needs of this Corridor. It includes (1) a direct stop at UCLA Gateway Plaza, (2) direct connections to other Metro lines, (3) stations placed where students will go, and (4) frequent trains with low headways. I hope that Metro can expedite the environmental review of the Sepulveda Line to speed up construction, reduce costs, and ensure that students at UCLA can benefit from this Line as soon as possible.

I am also FOR Agenda Item 11: the South Bay extension for the K Line should follow the existing Metro Right of Way. As more students commute to campus, and as UCLA expands to the South Bay, everyone will greatly benefit from a fully connected, comprehensive rail network that ONLY the ROW option can deliver quickly and cost effectively.

Thank you for voting to transform public transportation for UCLA and beyond.

I hope that Metro can expedite the environmental review of the Sepulveda Line to speed up construction, reduce costs, and ensure that we can benefit from this Line as soon as possible.

As a UCLA student public transport is very limited and there are not a lot of fun activities to do in Westwood it would be nice to not have to drive everywhere as parking is a nightmare. The future students of UCLA deserve a good transport system and more options to explore the city outside of having a car.

I am also FOR Agenda Item 11: the South Bay extension for the K Line should follow the existing Metro Right of Way. Everyone will greatly benefit from a fully connected, comprehensive rail network that ONLY the ROW option can deliver quickly and cost effectively.

Thank you for voting to transform public transportation for Los Angeles.

It includes (1) a direct stop at UCLA Gateway Plaza, (2) direct connections to other Metro lines, (3) stations placed where students will go, and (4) frequent trains with low headways. I hope that Metro can expedite the environmental review of the Sepulveda Line to speed up construction, reduce costs, and ensure that students at UCLA can benefit from this Line as soon as possible.

I am also FOR Agenda Item 11: the South Bay extension for the K Line should follow the existing Metro Right of Way. As more students commute to campus, and as UCLA expands to the South Bay, everyone will greatly benefit from a fully connected, comprehensive rail network that ONLY the ROW option can deliver quickly and cost effectively.

Thank you for voting to transform public transportation for UCLA and beyond.

Agenda Item 10: FOR
Agenda Item 11: FOR

Dear Metro Board of Directors,

As a UCLA student, I strongly urge the Metro Board to proceed with Modified Alternative 5 as the Locally Preferred Alternative (LPA) for the Sepulveda Transit Corridor.

I am FOR Agenda Item 10: Approve the Locally Preferred Alternative (Modified Alt 5) for the Sepulveda Transit Corridor. This heavy rail option will best serve UCLA students and residents of the San Fernando Valley and West LA!

I support the determination by Metro staff that Modified Alternative 5 is the best alternative to serve the needs of this Corridor. It includes (1) a direct stop at UCLA Gateway Plaza, (2) direct connections to other Metro lines, (3) stations placed where students will go, and (4) frequent trains with low headways. I hope that Metro can expedite the environmental review of the Sepulveda Line to speed up construction, reduce costs, and ensure that students at UCLA can benefit from this Line as soon as possible.

I am also FOR Agenda Item 11: the South Bay extension for the K Line should follow the existing Metro Right of Way. As more students commute to campus, and as UCLA expands to the South Bay, everyone will greatly benefit from a fully connected, comprehensive rail network that ONLY the ROW option can deliver quickly and cost effectively.

Thank you for voting to transform public transportation for UCLA and beyond.

Agenda Item 10: FOR
Agenda Item 11: FOR

Dear Metro Board of Directors,

As a UCLA student, I strongly urge the Metro Board to proceed with Modified Alternative 5 as the Locally Preferred Alternative (LPA) for the Sepulveda Transit Corridor.

I am FOR Agenda Item 10: Approve the Locally Preferred Alternative (Modified Alt 5) for the Sepulveda Transit Corridor. This heavy rail option will best serve UCLA students and residents of the San Fernando Valley and West LA!

I support the determination by Metro staff that Modified Alternative 5 is the best alternative to serve the needs of this Corridor. It includes (1) a direct stop at UCLA Gateway Plaza, (2) direct connections to other Metro lines, (3) stations placed where students and residents will go, and (4) frequent trains with low headways. I hope that Metro can expedite the environmental review of the Sepulveda Line to speed up construction, reduce costs, and ensure that we can benefit from this Line as soon as possible.

I am also FOR Agenda Item 11: the South Bay extension for the K Line should follow the existing Metro Right of Way. Everyone will greatly benefit from a fully connected, comprehensive rail network that ONLY the ROW option can deliver quickly and cost effectively.

Thank you for voting to transform public transportation for Los Angeles.

Margo Azzam
2nd year, Molecular Biology

(Sorry about that. I inadvertently deleted my sentence about connections to Metrolink. Everything else unchanged. -- KMR)

=====

Directors of the Authority,

As a long time public transportation advocate and former Metro governing official, I would like to endorse Alternative #5 as modified, for the Sepulveda Transit Corridor project.

Virtually all of my objections from previous public input have been addressed to my satisfaction:

1. Van Nuys Blvd. is served at the logical connection point (the presently under renovation Van Nuys G Line Station) which will allow for this to be a regional hub for three high-capacity services, including the G Line and the future East San Fernando Valley LRT, as well as to Metro Local and Rapid service, and LADOT DASH. The goal of multimodal interconnection is also furthered by the north terminus being colocated at Van Nuys Metrolink Station, which connects to the aforementioned Metro bus service, but also to LADOT DASH on a separate route from the one serving the G Line.
2. Similarly, the recommended route will not only connect with the D Line extension at Wilshire & Westwood Blvds. but also to Metro Local and Rapid service, an LADOT Commuter Express line, and municipal service from Santa Monica's Big Blue Bus and Culver CityBus, furthering the goal of multimodal hub stations wherever possible.
3. All of the logistics that would have accompanied any of the routing that involved Sepulveda Blvd. and the I-405 corridor through the Sepulveda Pass are eliminated by the heavy rail underground route being recommended by staff for approval.
4. The proposed south terminus is also at a connection point to Metro Rail (Expo/Sepulveda E Line Station) as well as municipal service from Santa Monica and Culver City. I am presuming here that Metro Rapid Line 761 will terminate in Westwood once the rail line starts revenue service.
5. Connectivity at Ventura Blvd. to multiple Metro Local and Rapid lines is also included in the modified proposal. I would suggest that the south terminal of Line 234 (Sepulveda Blvd.) be realigned to the new rail station, to further improve passenger connectivity.

Submitted for your consideration,

==========

Hello,

I am so enthusiastic about the proposed rail line that has been selected. I live in Sherman Oaks and work at UCLA and this project will help me personally commuting to work (not to mention getting to UCLA for sporting events and cultural events on the weekend) but will also be a game changer for my neighborhood which is inundated with traffic every morning and evening.

I'm so grateful to the work Metro has done to get to this point and cannot wait for the project to begin construction!

To the Board-
I am a resident of Encino, and am a retired UCLA employee. I heartily endorse the proposed project plan being considered on January 22. This project is very needed, and I encourage its approval.

The only improvement I would suggest would be to add a stop at Getty Center. I'm sure this was considered, but let's not let
"perfect be the enemy of the good."

Good afternoon,

I am writing to support 2 specific items that will be discussed in the meeting on Thursday 1/22/25.
First the sepulveda pass rail project. I wanna aplaud the board for seeing through the silliness of a monorail and recommending heavy rail alternative 5. As a westwood homeowner i am excited for the project and hope my children will reap tje benefits of the projects we start today. Please keep the gateway plaza station on UCLA as it is so central to the neighborhood. This is the project that will define this board.

Second the south bay extension. This project has so much potential for connecting our city- it makes more of the city accessible and is crucial for connecting south LA to LAX. Please do not allow one loud minority to derail a project. There are no displacements due to this project and the improvements along the existing freight and pipelines are so needed. Please continue this project!

ALSO. I rode my bike to the LAX transit center for a flight- the station is beautiful and the locker room feels secure to use. Please consider increasing the time limit to a week instead of 4 days. Otherwise 10/10.

This is a great idea and should have been done years ago! However, Los Angeles cannot be trusted to over see a project like this! We all are aware of the billions waisted on the train to nowhere and the billions waisted on our homeless problem. Until we get a responsible Mayor and Governor in place, this project will just turn into another avenue for corruption!

Hi,

I am THRILLED about the proposed new line connecting the SFV to West LA and other transit lines. My wife doesn't drive and getting from our house in Studio City to the Westside is nigh impossible by train in any respectable amount of time. Please get this built as soon as possible. It would also save us so much money on rideshares if we could get to lax from the valley.

Hello,

I am writing to show my support for the Sepulveda Transit Cooridor. I live in Encino and work in Brentwood as a teacher. This year, I had to go down to part time because I cannot take my kids to school and arrive at work on time. Most days it takes close to 50 minutes to drive 7 miles. It's exhausting and we need something to change. If a rail way was available, I would take it in a heartbeat. The traffic in LA is the worst part about living in this city—something needs to change.

Warmly,
Meg Shirk
Encino resident

Hi

I am a resident at one of the last remaining RSO buildings in the valley that you are planning to remove for the train station in almost every plan.

Please do not displace residents of the only true affordable housing in Los Angeles which are these 1970s RSO buildings for train stations when there are PLENTY of commercial buildings that could be utilized instead

A better train station would be the galleria or even the commercial property at the corner of Sepulveda and Dickens st in Sherman oaks. There is even a city owned lot in the back that could be utilized and expanded on

Please leave the residents alone. Train should be underground to not displace residents and commercial property should be utilized for train stations NOT residential property

Hi

This email is coming from a concerned resident who you will be displacing with the train when my apartment complex (one of the last standing RSO apartments) literally becomes a train station.

You are tearing down some of the last remaining RSO units by building this train down the Sepulveda pass.

No one is going to utilize the train when you are displacing all the people who would've potentially used it

People in the houses in this area will continue to drive their cars and the train will remain empty

Also safety is a huge concern with multiple assaults and stabbings happening on a daily basis on public transportation. No one wants to ride your train

I feel like this is being done for the sole purpose to accommodate the Olympics with 0 mind for the residents actually living in the area.

You are also devaluing property. None of those houses want a train in their backyard

You will be bringing severe crime and transients to the area with the train as well.

Please keep Sherman oaks and the rest of the valley from turning into congested downtown. We don't want it. You are pushing people out

People chose that area primarily because it's far from the congestion and chaos yet close enough to drive. You are bringing us the congestion and chaos. No one wants to live on top of each other and have trains running through their yards

NO TO TURNING THE VALLEY (and Sherman oaks) INTO NEW YORK

Hello Metro,

Please build this project as soon as possible. This is the most critical infrastructure project in all of LA County, linking two of the most vital parts of the City of Los Angeles. The Valley has long been ignored when it comes to transit projects in the county. This infrastructure investment is long overdue and will benefit the community for generations to come. This grew up in the Valley, so I know how congested the 101 and 405 freeways are. The answer to that is mass transit, specifically this corridor. I fully support this project, including this Modified #5. Build it now!

Sincerely,
Jason Elepano

Hello,

I am writing to submit a comment in support of the Locally Preferred Alternative (LPA) for the January 22nd Metro Board Meeting.

As a Westside resident, I sincerely hope the Metro Board votes to approve the selection of the modified alternative five as the Locally Preferred Alternative for the Sepulveda Line. The Metro staff appears to have a done an excellent job of listening to constituents and finding a route that avoids inefficient/ineffective technology (Just say NO to the monorail!!!), provides excellent ridership/places the stations in locations with good access for residents. This route, along with Bechtel's technology/expertise has the potential to make this a backbone of our system and help change the perception of metro rail in our region for the better.

Best,
Mark Fugina

Hi,

I wanted to comment on the proposal happening in Thursday January 22nd. I remember there was talks in the original proposal of including a bike lane/path that would follow the new busway through the Santa Monica mountains. As in avid road cyclist, it would be a great addition and monumental for the Los Angeles cycling community to have an expansion of safe cycling roads for leisure and transportation. Is there any discussions happening in regards to including a bike pathway on the new van nuys corridor transit proposal? Thank you again for making our city more accessible to us.

Regards,

Lesley Martinez

I strongly endorse the chosen Modified Alternative 5 for the Sepulveda Transit Corridor project.
I have lived near the 405 in Sherman Oaks for 36 years. A lot of time has been wasted in traffic on that freeway.
The last "improvements" took a long time and increased traffic during their construction, yet did not improve travel time on the 405 at all.
Thank you for continuing to see that this Alternative 5 option comes to fruition.

Good morning,

A rail option that connects the valley to the Westside is so important. I purposely don't visit friends, or go to the Hammer museum for example, because I will have to sit in so much traffic no matter what time of day.

This option can't come fast enough and I look forward to being able to ride it to UCLA in the future.

I take the metro now from Noho to DTLA twice a week and love not having to drive. I recommend taking the metro to everyone, at least during the day, but it's frustrating that we still have so few rail lines in LA County.

I fully support the Sepulveda Transit Corridor project.

Thank you,

Jessica Taylor

People won't use it because it will be unsafe and dirty like the rest of Metro. Whatever alternative is chosen, it will be a source of grift and fraud.
Michael Harris

I am writing to support Alternative Hybrid #5. I am most grateful to Metro staff for sifting through over 8000 comments and coming up with outstanding solutions. I have been working with the communities in the NE San Fernando Valley for decades and know the problems faced by residents and businesses alike as they struggle with delays on the 405. Hybrid Alternative #5 will be a blessing to so many who need it now and the generations that will need it in the future.

I urge the Metro Board to approve Hybrid Alternative #5. After its approval hopefully all communities impacted and benefited by the project can be given options as to stations and links. I will look forward to that.

Thank you,
Marlene Grossman (former chair of Move LA)

Dear LA Metro Board,

I am unable to attend this Thursday's meeting (on 1/22/26 at 10 am). Therefore please accept this comment instead.

For the South Bay light rail extension to Torrance, please support FEIR certification and approval of the hybrid LPA. Elevated rail is the way to go. The Hawthorne option is too expensive.

Also, please support, advance and build the modified alternative 5 proposal for the Sepulveda Corridor.

Thank you,
Sprague Terplan

Dear Metro Board:

I am a longtime resident of Los Angeles County who has lived in communities across the cities of Los Angeles and Pasadena (my hometown), as well as unincorporated area. I am also a tenant and work for a large employer in Los Angeles.

As you take up any and all items before you, please stay focused on ways to support an environmentally sustainable and more affordable quality of life in our region. In particular for the January 22 meeting, I ask that you take the following actions:

On Item 10 - please support staff's recommendation on the Modified Alternative 5 route for the Sepulveda Transit Corridor. We need to continue with bold, impactful rail system development that increases transit ridership while being cost-effective.

On Item 33 - please do not move forward with exploring ways to undermine SB 79. This law will help generate denser and more compact development that is crucial to more affordable housing and higher public transit ridership.

Thank you,

Christophe LaBelle

Good morning Chair and Board Members,

Joining LA Forward Institute and other aligned organizations, I am writing to express my strong support for the staff-recommended locally preferred alternatives for both the Sepulveda Transit Corridor (Alternative 5) and the C/K Line Extension to Torrance.These projects deliver on the promise voters made with Measures R and M by expanding fast, reliable rail service to both the San Fernando Valley and the South Bay. They will improve access to jobs, education, and LAX, reduce traffic and emissions, and strengthen Metro's countywide transit network.I urge the Board to approve both projects and move them forward without delay.

Thank you for your leadership and consideration,

Matt Simon

Hello,

I'm writing to express my support for the train connection from SFV to Westwood.

For 7 years I've lived in Sherman Oaks and worked in Brentwood. This commute by car, while beautiful, is not sustainable.

So many of my neighbors and I need to make the trip to the westside at least twice a day, 5 days a week, not to mention weekends. This would be an amazing step forward for residents of CD4 and Los Angeles as a whole. It would also open up the congestion on the 405 a bit for those visiting Los Angeles from further away.

I'm also encouraged at the prospect of the many jobs this project would create.

I'm in full support of option 5 and would love to see it happen as soon as possible.

Sara A. Brum

Dear Metro Board and Project Team,

I am writing to express my support for Modified Alternative 5.

I live near the Van Nuys starting point and strongly value the opportunity for reliable, high-capacity Metro access to the Westside. Improved transit connectivity would make a meaningful difference for my daily life—particularly for commuting to work as well as accessing Westside retail, services, and amenities without relying on a car.

Modified Alternative 5 appears to best balance speed, reliability, and regional connectivity while serving key trip patterns between the San Fernando Valley and the Westside. For residents like me who live near the northern terminus, this alternative offers the greatest potential to reduce congestion, improve travel times, and make Metro a practical option for everyday trips.

Thank you for considering community input as you move forward in evaluating the alternatives. I appreciate the work being done on this important project and encourage continued advancement of Modified Alternative 5.

Sincerely,
Michelle Aucoin

Dear Metro Board Clerk,

I am writing to express my strong support for the Sepulveda Transit Corridor project and the Metro staff's recommendation for the "Locally Preferred Alternative" (LPA), specifically Modified Alternative 5.

I believe that Modified Alternative 5 is the best solution to meet our community's needs. This fast, fully underground, high-capacity rail line would transform a 40-to-90-minute car trip into an 18-minute rail journey. This project represents more than just a commute improvement; it is about providing reliable access to jobs, education, and healthcare for people like me.

Furthermore, this investment aligns with our goals of reducing climate pollution and creating high-quality jobs while building infrastructure that meets the actual scale of Los Angeles' challenges.

I urge the Metro Board to move forward with this recommendation to finally provide a world-class transit option that connects our city and strengthens our communities for the next century.

Best regards,

Elizabeth Meshes

Hello,

I'm emailing as a Valley resident in Reseda, to express my enthusiastic support for a modified Alternative 5 underground rail solution to connect the Valley to the Westside / LAX. As a resident walled in greatly by city my wife and I inevitably spend collectively 3-4 hours of every day driving to get to work or business or even just fun on the freeways. Apart from just gaining back precious hours of our life, the chance to be safer by less time driving, save money by less time driving and experience more of our city due to easier access are all contributing factors to make this a huge win. Having traveled extensively in other counties and cities with effective train public transit I know how desperately LA needs this. I hope you will work to see this through wisely, safely and as quickly as possible!

Thank you,
Adam Willis
Reseda, CA

Hi there! As a metro rider, I strongly support the Hybrid alignment for the South Bay extension, as the cheaper option, it means that funding will happen sooner, helping me connect car-free from my home in Pasadena to my In-laws in Torrance cheaply when driving is not an option. This will maximize Metro's investment in the region and make the K line an excellent transit spine for the region.

I also strongly support the staff recommendation for the Sepulveda line, Heavy rail is the absolute right choice and the connection with UCLA will be so so valuable.

Thanks!

Metro Board Members,

I am writing in strong support of the Sepulveda Transit Corridor.

I commute on the 405 every day for work, and the conditions are unsustainable. My trip routinely takes an hour to get to work and up to two hours to get home. It is unreasonable that having a good job requires spending three hours a day stuck in traffic. Many of us are losing valuable time with our families simply because there is no reliable alternative to driving through the Sepulveda Pass.

A high-capacity, fully underground rail solution is the only option that meaningfully addresses congestion, reliability, and access between the Valley and the Westside. The recommended Modified Alternative 5 delivers on what Angelenos were promised: fast, dependable transit that actually works.

Please move this project forward quickly, efficiently, and safely. People deserve to get to work and home at a reasonable hour and live balanced lives. Sitting in traffic should not be the price of opportunity in Los Angeles.

Thank you for your leadership and consideration.

Sincerely,
Cindi Marks

HI,
Here's some feedback from someone that lives and works in the area.
Supulveda Transit Corridor is a terrible idea for many reasons.
Firstly it's an insanely expensive project. That money should be spent on way more important things for this city.
Secondly, the metro system we currently have is abysmall. Nobody wants to use it.
It's unsafe, poorly setup and just awful.
I have lived and worked in London and New York and also used the Paris Metro.
They make the LA metro look like it's designed and run by clowns.
LA Metro need to learn to optimize and make user friendly and user safe the Metro we have before blowing $9.5 billion dollars
on yet another LA boondoggle.

There are so many common sense alternatives for a fraction of the price.
Plus, lets not forget, a huge percentage of the LA population are never, ever going to use an underground tunnel system in
a city prone to very nasty earthquakes. I can't say I blame them.

Couldn't you at least try a dedicated bus lane with a decent express bus service that only goes to major hubs and doesn't stop at every 7/11 along the way?
That massive percentage of earthquake shy people will actually get on a bus if it's quick and efficient.

We aren't re-inventing the wheel here, there are so many cities particularly in Europe that have got this right.
How about we study those cities?

In summary, please don't flush $9.5 billion of tax payers money on a tunnel that nobody is going to want to use.

regards,
Paul Rabjohns

To the Metro Board,

I'm deeply concerned for the future of our beloved city's metro system after hearing how the C line extension discussion went during the 1/14/2026 Metro Planning and Programming Committee meeting. While it's great to hear a near majority support the Sepulveda modified Alt 5 option, the possibility of pushing back, modifying, or outright cancelling the C line extension to Torrance is downright appalling & maddening. You have done so much good work to promote smart, long term planning for other metro lines, so please (I beg you PLEASE) stiff arm any pushback to the slam dunk ROW option & move it forward. Choosing any option other than the ROW would be profoundly dumbfounding from a cost, implementation timeline and long term vision sense. The ROW is cheaper, better fits the long term vision for the C (K) line to connect to Long Beach, and dramatically improves the infrastructure in the surrounding stations. I understand the South Bay NIMBYism voice is strong — but be stronger. Don't let out-of touch, selfish, and shortsighted people hamper the impactful work and long term vision you've done so far with the ROW.

As a PROUD young (30) Angeleno & metro advocate who actively spends time getting my friends to pay attention and participate in everything LA Metro — including reiterating what LA Metro does matters (even if it's takes decades) — not choosing ROW would break my heart and honestly shortchange our future. It'd also make it impossible to defend the board's actions. Please deeply think about the long term impacts of this vital extension decision. What kind of future do you want to create and legacy do you want to leave behind?

Profoundly serious and appreciative,
Ben Beckwith (Mar Vista)

Dear Metro Board,

I am writing to voice my opinions on some of the items at the upcoming Metro Board meeting this Thursday. I was born and grew up in Los Angeles and am currently a City Planning student at Cal Poly San Luis Obispo.

I support Item 10. The Modified Alternative 5 for the Sepulveda Transit Corridor is a great alternative for what may become the most important line in our entire network. The staff were right to recommend this alternative.

I support Item 11 and oppose the last minute attempt (Item 11.1) to derail the C Line Extension to Torrance. To pass item 11.1 would be to cave to a small group of loud opponents who do not actually reflect public opinion about our public transit. Metro already owns the ROW; we should avoid delaying the project by years and spending hundreds of millions of more dollars. Please support staff's recommendation, and vote no on 11.1.

Finally, I oppose Item 33. SB 79 is the law in California, to ask for an exemption is ridiculous and will limit us from creating more housing around transit stops which will increase ridership and ease the housing crisis.

Thank you for your consideration,
Owen Taylor
Los Angeles, CA 90041 (writing from San Luis Obispo)

Hello,

My name is Diego Celaya. I live in Culver City. I have been without a car for about a year. The LA transit system has made it so I can get around to certain places when I need to. The system is decent but could be so much better.

The K line should definitely be extended to Torrance. The route follows an existing rail line. It would help people to travel easier and make parts of the city better connected.

The Sepulveda line should definitely be Alt 5.

And do not change or water down anything about SB79. It will revitalize our city.

Thank you,
Diego

Good evening,

My name is Daniel Getter and I am a current west Los Angeles resident that grew up in the San Fernando Valley. I am writing to voice my support for LA Metro's plan to construct heavy rail between the SFV and the westside, aka Modified Alternative 5. Any time I want to see my family, I often contend with traffic times exceeding one hour outside of work hours. Having a mode of transit that would get me to the valley in less than 20 minutes would, and I do not exaggerate when I say this, be a life changing option for myself and the tens of thousands of Angelenos who commute between the two on a daily basis.

Sincerely,
Daniel Getter

I'm writing in support of the metro line that will go under the sepulveda pass!

It's beyond time that we have an alternative to sitting in the gruelling 405 traffic to get from the valley to the West side.

My father lives on the Westside and I live in the valley. It will make visiting each other so much easier, as well as make the commute easier for the people who commute that route for work.

Yes on the sepulveda metro line!

Respectfully,

Rob Siminoski

Dear Metro Board Members

I'm a born and raised LA constituent, cyclist, car driver and life long bus rider since the RTD days. Ive been to many many meetings, voted YES on R J and M because this city needs world class transit.

I URGE YOU to please vote YES on Modified Alternative 5.

You have a chance to do something that will benefit Los Angeles for the next 100-200 years. When we look back on the decisions planners were making in the 50's and 60's it's always "why did they ruin this" or "why didnt they build it right". We are now at a monumental moment where all of you can become legendary for BUILDING IT RIGHT. People in the future will APPLAUD you for building heavy rail from Westwood to Van Nuys!

DO IT!

> **To:** BoardClerk@metro.net
> **Subject: Disapproval of Modified Alt 5 planned heavy rail line**
>
> Los Angeles Metro Planning Department,
> I am writing to express my strong disapproval of the proposed Modified **Alternative 5 rail line alignment**, which would essentially route the line beneath **Beverly Glen Boulevard through the hills of Sherman Oaks and Bel Air**.

After reviewing the available information, I have serious concerns about the long-term consequences this plan would impose on the surrounding communities. Running a major heavy rail tunnel beneath a densely populated hillside corridor presents significant risks. The construction and ongoing operation of such a project would inevitably disrupt daily life for residents who rely on the stability and safety of this terrain. The hills in this area are already sensitive to geological movement, and introducing large-scale tunneling raises legitimate concerns about structural integrity, noise, vibration, and emergency access. These are not abstract worries—they directly affect the safety and well-being of the people who live above the proposed alignment.

Additionally, the presence of a subterranean rail line has the strong potential to **lower property values** in neighborhoods that have long been defined by their residential character and environmental stability. Homeowners who have invested in these communities should not be forced to absorb the financial and quality-of-life consequences of a routing decision that offers them no tangible benefit.

I am also deeply concerned about the proposal to place a subway station at **Ventura Boulevard and Van Nuys Boulevard**, one of the most congested intersections in the San Fernando Valley. This location already struggles with heavy traffic, limited pedestrian infrastructure, and constrained roadway capacity. Introducing a major transit hub at this intersection would intensify congestion, complicate commutes for thousands of drivers, and create new safety challenges for pedestrians and cyclists. Rather than improving mobility, this station placement risks making an already overburdened corridor even more difficult to navigate.

I urge Metro to reconsider both the Modified Alternative 5 alignment and the Ventura/Van Nuys station location. These decisions will have lasting impacts on the safety, livability, and economic stability of the affected communities. I strongly encourage the agency to pursue alternatives that achieve transit goals without imposing disproportionate burdens on residents.

Thank you for your attention to these concerns. I expect that Metro will take community input seriously and reevaluate these aspects of the project with the care they deserve.

Sincerely,
Jane Vaynerov

My name is Troy Rubio Trejo, and I am a resident of Los Angeles County. I am writing to express my full support for several critical Metro projects that will greatly enhance regional mobility and equity across our county.

I fully support the Sepulveda Transit Corridor – Modified Alternative 5 (5LPE) and the Final Environmental Impact Report (FEIR). This project is essential to improving north–south connectivity and reducing congestion in one of the most heavily traveled corridors in the region.

I also strongly support the opening of the D Line Phase One through the

Wilshire Corridor, as well as the South Bay extension of the K Line. These projects represent long-overdue investments in reliable, high-capacity transit for communities that need it most.

Additionally, I fully support the Metro Board's selection of the Metro ROW Hybrid Alternative alignment for the South Bay K Line Extension. This alignment will provide efficient service while maximizing long-term benefits for riders and surrounding communities.

The South Bay deserves expanded transit options, and these projects are vital to improving access, mobility, and quality of life. I urge the Metro Board to continue moving forward decisively on all three of these major projects.

Thank you for the opportunity to provide public comment and for your continued leadership.

Respectfully,

Troy Rubio Trejo

Los Angeles County Resident

Sent via email to: boardclerk@metro.net

Dear Ms. Wiggins,

For many years, we have followed Metro's plans to extend the C (Green) Line into Torrance and past our property, *South Bay Galleria*. We have met with Metro representatives numerous times, participated in Metro's workshops and walking tours and of course, have spoken about the project with our shoppers, tenants and other members of the community.

We have previously written to express our belief that the alignment along Hawthorne Boulevard is the most equitably responsible route through the Hawthorne Boulevard business district. Not only does this route provide the best possible access to this vital economic corridor, but it does so in a way that will enhance ridership and provide a visible public transit alternative to those wishing to get out of their cars and access the shops, restaurants, housing, businesses and even hotel rooms along the entire route. A copy of our prior letter dated *December 22, 2022* is attached for your convenience.

As a project update since our last letter, we recently lodged an application with the City of Redondo Beach to add an additional 350 residential units, taking the total residential unit count to 650. This will further reinforce the vision of a walkable community we hope to create. Having convenient and direct access to the C (Green) Line will make it even easier for our residents to commute to and from work and to and from key stops like the airport and Inglewood sports and entertainment venues without ever having to get in their cars.

We are deeply invested in the success of our community and want to make sure that Metro's C (Green) Line extension is done in a way that is beneficial to the entire community, including Redondo Beach, Lawndale and Torrance, as well as to the millions of Southern California visitors who will use the system to get around the region.

We welcome the opportunity to continue working with Metro to make the extension a success and would be pleased to collaborate with Metro to create a space at our location that would enable Metro public safety officers to have a South Bay presence. In addition, we would be happy to host a Metro ticket booth or sell TAP cards to riders at our concierge desk.

If you have any questions regarding our position or want to further explore ways in which we can partner with Metro, please do not hesitate to reach out.

Very Best,

Stuart Miller

December 22, 2022

Sent via email to: boardclerk@metro.net

Dear Ms. Wiggins,

For many years, we have followed Metro's plans to extend the Green Line into Torrance and past our property, *South Bay Galleria*. We have met with Metro representatives numerous times, participated in Metro's workshops and walking tours and, of course, have spoken about the project with our shoppers, tenants and other members of the community.

The city has approved a multi-hundred-million-dollar renovation and expansion project for our center that will include not only a complete remodel of the existing mall, but also the addition of 300 new apartment units on the corner of Hawthorne and Artesia Blvds (20% of which will be dedicated to affordable housing), a 150-room hotel, office and public open space network.

We are deeply invested in the success of our community and want to make sure that Metro's Green Line extension is done in a way that is beneficial not only to our new center – to be renamed *South Bay Social District* – but also to the entire community, including Redondo Beach, Lawndale and Torrance. Furthermore, we want to make sure that residents, employees and shoppers will have the best possible access to the Green Line, providing convenience, maximizing ridership, reducing traffic and improving the environment.

We believe that the alignment along Hawthorne Boulevard is the most equitably responsible route through the Hawthorne Boulevard business district. Not only does this route provide the best possible access to this vital economic corridor, but it does so in a way that will enhance ridership and provide a true public transit alternative to those wishing to get out of their cars and access the shops, restaurants, housing, businesses and even hotel rooms along the entire route.

Because the creation of *South Bay Social District* will result in hundreds of new jobs, a light rail line along Hawthorne Boulevard will allow employees to conveniently commute to work without having to drive. In addition, the Hawthorne option would provide hundreds of businesses along Hawthorne Boulevard and throughout Torrance a new opportunity to ensure that their business thrive.

In addition, the construction of a new hotel at *South Bay Social District* means that travelers using this Hawthorne Boulevard route will be able to easily connect to Los Angeles International Airport. The right-of-way or ROW option, however, provides a less-visible link for travelers, who would be less likely to travel to LAX or job centers using the Green Line since the ROW station would not be located on a major thoroughfare.

The proposed Green Line extension route along the ROW offers no significant destinations, while the new *South Bay Social District* will be built just a matter of feet away from the proposed station location on Hawthorne Boulevard. This project will be the epicenter of North Redondo, attracting residents, shoppers, employees and visitors – many of whom will be incentivized to ride the light rail system if the stop is built close and convenient enough to their destination.

In addition, if located along Hawthorne Boulevard, the Green Line would provide an attractive and vibrant mass transit option to a wider cross-section of South Bay residents from Lawndale to Torrance and would serve as the first exemplar transit-oriented development built in the South Bay. For mass transit systems, visibility is critically important to success. Hiding the Green Line route behind homes and having it wind through lightly trafficked areas means fewer people will be reminded of how easy the system is to use. But locating it in the heart of active and popular destinations along a major thoroughfare that links numerous South Bay cities, means the Green Line will always be top of mind and stand out as a visible and viable option for commuters.

We welcome the opportunity to continue working with Metro to make the Green Line extension a success and would be pleased to collaborate with Metro to create a space at our location that would enable Metro public safety officers to have a South Bay presence. In addition, we would be happy to host a Metro “ticket booth” or sell TAP cards to riders at our concierge desk. We see many opportunities to partner with Metro as each of our projects move forward.

If you have any questions regarding our position or want to further explore ways in which we can partner with Metro, please do not hesitate to reach out.

Very Best,

Stuart Miller

The Honorable Fernando Dutra and LA Metro Board of Directors
One Gateway Plaza
Los Angeles, CA 90012-2952

RE: LA Metro Letter of Support – C/K Line Extension to Torrance FEIR Certification & Approval of Hybrid LPA

Dear Board Directors of LA Metro and South Bay Cities Council of Governments:

On behalf of the **Los Angeles New Liberals**, we write in **support of certifying the Final Environmental Impact Report (EIR) and approving the C/K Line Extension to Torrance**. By advancing the project and moving forward with the *Hybrid Locally Preferred Alternative (LPA)*, Metro can deliver a much-needed, once-in-a-generation rail connection between LA County and the South Bay. This project will attract millions of new riders, reduce travel times, and respond to community concerns through design mitigation and new amenities along the Metro right-of-way (ROW), while aligning with available funding and the Measure M schedule.

This project is a critical piece of the regional rail network, connecting the South Bay, one of LA County's major job centers, with the broader county through reliable, frequent light rail service. Given the updated K line routing, the extension will also produce a convenient, one-seat ride between Torrance and the E Line. Current estimates project a **19-minute ride from Torrance to LAX**, alongside significant travel time savings for trips between the South Bay and greater Los Angeles.The project will also leverage over $45 million in local mobility investments by connecting to two new regional bus centers in Redondo Beach and Torrance, expanding access to the entire South Bay.

The South Bay suffers from congested streets and limited rapid transit options, forcing long travel times for drivers and transit riders alike. Congestion is projected to worsen by 30% by 2045. The C/K Line Extension will provide a fast and reliable rail option to connect residents to jobs, schools, and services across LA County, with benefits concentrated in many Equity Focus Communities along the Metro C and K Lines.

As approved by the Board in May 2024, **the Hybrid LPA is the most responsive to the available budget and community priorities**. It is fully grade-separated for light rail, connects directly to local transit centers, adds new walking paths, and modernizes safety conditions along the existing rail corridor. The project is well-positioned for implementation, with over $1.4 billion already secured from Measure R, Measure M, TIRCP, and SB 1. Following FEIR certification, it will be highly competitive for state transportation grants, and the LPA will not require federal funds.

The South Bay's jobs and housing imbalance is projected to worsen, with employment expected to grow roughly twice as fast as population in coming decades. Planned housing growth will require transit solutions that mitigate traffic impacts. The extension is projected to reduce 13.7 million vehicle miles traveled and 1,905 metric tons of CO2 per year, and to attract approximately 1.5 million new Metro riders annually. It will also expand access to key job centers in aerospace, government, manufacturing, and healthcare, and generate more than 15,000 construction jobs. fileciteturn1file0L33-L36

Critically, the Hybrid LPA represents the most streamlined path to construction, with the earliest opening date and zero residential displacements. By contrast, the Hawthorne Alternative introduces additional risks in cost and schedule, including potentially years of delay, costly acquisitions, and increased traffic impacts. We join the South Bay On Board Coalition in strong support of the project.

We urge the Metro Board of Directors to approve and certify the Final EIR so that the project can advance into design and construction. The C/K Line Extension to Torrance is a critical component of Measure M promised to South Bay voters. It will transform mobility in LA County, bolster the local economy, improve air quality, strengthen safety and multimodal access along the corridor, and deliver meaningful benefits to low-income households and disadvantaged communities.

Sincerely,

Tyler Laferriere-Holloway
Chapter Lead
LA New Liberals

Eastside Housing for All

RE: Letter of Support – C/K Line Extension to Torrance FEIR Certification & Approval of Hybrid LPA

Dear Metro Board Directors and South Bay Cities Council of Governments:

On behalf of Eastside Housing for All, we submit this letter in strong support of certifying the Final Environmental Impact Report (FEIR) and approving the Hybrid Locally Preferred Alternative (LPA) for the C/K Line Extension to Torrance. We are a coalition of residents and advocates who believe Los Angeles becomes more affordable and more livable when we pair housing abundance with real mobility choices.

Eastside Housing believes that our city is experiencing a cost-of-living crisis, largely because housing options have been kept scarce and opportunities hoarded. That scarcity forces families into impossible tradeoffs: longer commutes, higher transportation costs, and fewer chances to reach the jobs, schools, and services that make stability possible. In a region as interconnected as Los Angeles County, expanding fast, reliable transit is one of the clearest ways to widen opportunity without telling working people to "just move closer" to places they have effectively been priced out of.

Approving the Hybrid LPA moves forward a once-in-a-generation rail connection between LA County and the South Bay that Metro has indicated will attract new riders, reduce travel times, and address community concerns through mitigation and corridor amenities, while staying aligned with available funding and the Measure M schedule.

As described in the project materials summarized in Metro's template support letter, the extension would operate as part of the K Line, extending from the current terminus at Redondo Beach (Marine) Station to the Mary K. Giordano Regional Transit Center in Torrance, connecting riders to major job and service centers through reliable, frequent light rail. The project leverages local mobility investments through connections to regional transit hubs in Redondo Beach and Torrance, and with the updated K Line operations and opening of the LAX Metro Transit Center, supports a one-seat ride between Torrance, Redondo Beach, LAX, and Inglewood, with onward connections across the county.

This matters because transportation is a cost-of-living issue. Congested streets and limited rapid transit options translate into lost time, lost wages, and fewer choices for households already stretched thin. Metro's materials indicate congestion is projected to worsen substantially by 2045.

We also support the Hybrid LPA because it is described as the most responsive to budget realities and community input: grade-separated for light rail, direct connections to local transit centers, new walking paths, and safety modernizations along the existing rail corridor. Metro's template letter also notes that the project is positioned for funding, with over $1.4 billion already secured from Measure R, Measure M, TIRCP, and SB 1, and that it is competitive for additional state transportation grants following FEIR certification, without requiring federal funds.

Finally, we encourage Metro and local jurisdictions to treat this investment as part of a broader affordability strategy. We advocate for affordability through abundance: legalizing more homes in more places, especially near jobs and transit; streamlining approvals so housing can be built faster and at lower cost; and protecting stability so existing residents are not displaced.

For these reasons, we urge the Metro Board to certify the FEIR and approve the Hybrid LPA so the project can move into design and construction. The C/K Line Extension to Torrance is a critical component of the region's mobility future, with the potential to improve access to jobs and services, reduce driving impacts, and strengthen countywide opportunity.

Sincerely,

Thomas Irwin
Co-Chair at Eastside Housing for All

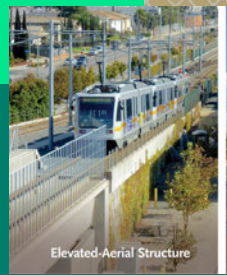
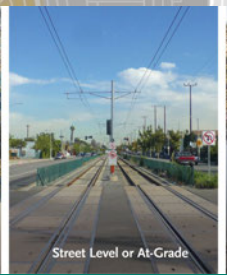
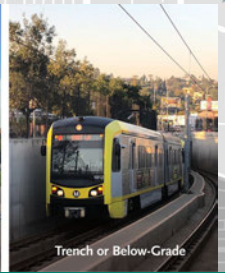
BENEFITS OF LPA

- **Hybrid Alternative** chosen by Metro Board as LPA in May 2024
- **No residential displacements**
- Under-crossings at 170th and 182nd to minimize noise and conflicts
- **Modernization to freight corridor** with new trackwork, ballast, sound walls, quiet zone
- **Safe & compatible with freight & residential:** similar configurations on A Line and E Line in Westside, South LA, South Pasadena, Pomona
- **Connects directly to Redondo Beach and Torrance Transit Centers** – local cities spent over $45M
- Improved first-last mile and neighborhood connectivity with bike/walk trails
- **Serves 3rd largest jobs center in LA County**
- Addresses housing growth and demand
- **Generates over 15,000 jobs** in construction and operation
- Reduces nearly 15 million VMT/yr and 2,000 MT of CO2/yr, an alternative to driving on 405







PROJECT FUNDING

Construction Cost Estimate, 2025

Construction Cost Estimate Summary September 2025

Construction Cost Estimates $ in millions	ROW Elevated/ At-Grade	Trench Option	Locally Preferred Alternative (Hybrid Alt)	Hawthorne Option
2022 Baseline Construction Costs	$1,100	$1,483	$1,213	$1,497
Design Refinements in Final EIR	$118	$128	$119	$107
Actual Inflation of Baseline Costs (2022 to 2025)	$219	$290	$240	$289
Escalation after 2025 (3.5% average annual)	$438	$712	$523	$814
Contingency (~40% of baseline costs) allocated & unallocated	$556	$735	$608	$733
2025 Total Estimate for Final EIR	**$2,431**	**$3,348**	**$2,703**	**$3,440**
2022 Draft EIR Total Estimate (previous)	$1,967	$2,844	$2,235	$2,962
Difference (Draft EIR vs Final EIR)	$464	$504	$468	$478

*Figures are rounded

Page 19 of 22

Funding Strategy	Metro ROW (Elevated/ At-Grade)	Trench Option	Hybrid Alternative	Hawthorne Option
Secured Sources				
Local Sources	**Funding Estimate (YOE $M)**			
Measure R	$272.0	$272.0	$272.0	$272.0
Measure M*	$828.5	$828.4	$828.4	$878.3
3% Local Match Requirement**	$59.0	$85.3	$66.9	$88.9
State Sources				
TIRCP Grant	$231.3	$231.3	$231.3	$231.3
SB1 - Local Partnership Program	$9.0	$9.0	$9.0	$9.0

Smallest funding gap of any Metro project.

- **C Line Extension to Torrance:**
  - 4.5 mi extension of K Line LRT
  - $2.7B estimate, $1.34B secured + $66M local match
  - = 50-52% of total at Final EIR
- **Eastside Transit Corridor:**
  - 4.7 mi extension of E Line LRT
  - $7.9B estimate, $3.6B secured
  - = 46% of total at Final EIR (May 2024).
- **Westside Santa Ana Branch / Southeast Gateway Line:**
  - 14.5 mi new LRT along rail corridor
  - $7.2B estimate, $2.55B secured
  - = 35% of total at Final EIR (Jan 2024)
- **East San Fernando Valley Light Rail:**
  - 6.7 mile new LRT
  - $3.6B budget, $790M committed
  - = 22% of total at monthly status report, after FEIR (Aug 2025)

POTENTIAL COMMUNITY BENEFITS

- Technical assistance for FRA quiet-zone applications
- Stormwater infiltration native plant gardens
- Community hotline during construction
- Reimbursement for property upgrades (new windows, fences, privacy trees, landscaping)
- Close gaps in bike/walk trail in Redondo & Lawndale
- Tap-to-exit stations for safety
- Tree giveaway events along corridor
- Funding for pocket parks in Lawndale

C/K Line Extension

APPROVE FINAL EIR

Let's deliver for ALL our communities.

I am writing to urge you to certify the Final EIR and approve the Hybrid Alternative (Locally Preferred Alternative) for the C/K Line Extension to Torrance. While my City Council has frequently opposed the Metro Right-of-Way (ROW) alignment, please understand that they do not speak for all Lawndalians. Many of us in the community fully support the LPA and want to see this project move forward without further delay.

I support the Hybrid Alternative (ROW) for the following reasons:

1) Protecting Hawthorne Blvd: The alternative option—building down Hawthorne Boulevard—would be disastrous for our city. It would subject our primary commercial corridor to years of heavy construction, gridlock traffic, and business closures. The LPA preserves Hawthorne Boulevard for our local businesses and residents.

2) Smart Grade Separation: The Hybrid Alternative includes a trench at 170th Street. This is a "win-win" that provides the speed and efficiency of the ROW while addressing community concerns about safety and noise at key intersections.

3) Connectivity & Future: I want my family to have access to the regional rail network. Delaying this project or forcing a "restart" to study inferior alignments only hurts residents who are waiting for a clean, car-free alternative to reach LAX, SoFi, and the rest of the county.

Please stop the delays. The "silent majority" of Lawndale residents are ready for this train. We urge you to hold firm to the studied facts, certify the EIR, and build the Hybrid Alternative.

Sincerely,

It would subject our primary commercial corridor to years of heavy construction, gridlock traffic, and business closures. The LPA preserves Hawthorne Boulevard for our local businesses and residents.

2) Smart Grade Separation: The Hybrid Alternative includes a trench at 170th Street. This is a "win-win" that provides the speed and efficiency of the ROW while addressing community concerns about safety and noise at key intersections.

3) Connectivity & Future: I want my family to have access to the regional rail network. Delaying this project or forcing a "restart" to study inferior alignments only hurts residents who are waiting for a clean, car-free alternative to reach LAX, SoFi, and the rest of the county.

Please stop the delays. The "silent majority" of Lawndale residents are ready for this train. We urge you to hold firm to the studied facts, certify the EIR, and build the Hybrid Alternative.

Sincerely,

I am writing to urge you to certify the Final EIR and approve the Hybrid Alternative (Locally Preferred Alternative) for the C/K Line Extension to Torrance. While my City Council has frequently opposed the Metro Right-of-Way (ROW) alignment, please understand that they do not speak for all Lawndalians. Many of us in the community fully support the LPA and want to see this project move forward without further delay.

I support the Hybrid Alternative (ROW) for the following reasons:

1) Protecting Hawthorne Blvd: The alternative option—building down Hawthorne Boulevard—would be disastrous for our city. It would subject our primary commercial corridor to years of heavy construction, gridlock traffic, and business closures. The LPA preserves Hawthorne Boulevard for our local businesses and residents.

2) Smart Grade Separation: The Hybrid Alternative includes a trench at 170th Street. This is a "win-win" that provides the speed and efficiency of the ROW while addressing community concerns about safety and noise at key intersections.

3) Connectivity & Future: I want my family to have access to the regional rail network. Delaying this project or forcing a "restart" to study inferior alignments only hurts residents who are waiting for a clean, car-free alternative to reach LAX, SoFi, and the rest of the county.

Please stop the delays. The "silent majority" of Lawndale residents are ready for this train. We urge you to hold firm to the studied facts, certify the EIR, and build the Hybrid Alternative.

RE: LA Metro Letter of Support – C/K Line Extension to Torrance FEIR Certification & Approval

Dear Board Directors of LA Metro and South Bay Cities Council of Governments:

On behalf of my business along Hawthorne Blvd, I submit this letter in support of certifying the Final Environmental Impact Report (EIR) and approving the C/K Line Extension to Torrance project along the Metro owned right of way (ROW). By approving the project and moving forward with the Locally Preferred Alternative (LPA), we can ensure minimal disruption of business along Hawthorne Blvd.

I am aware that "future stations" are often discussed as a mitigation of the "bypass" concern. However these stations are rarely, if ever implemented. As a business along the proposed Hawthorne Blvd alignment we cannot accept this plan with the promise of future business from a nonexistent station. History has shown "in-fill" stations will not be built. We must assume if the station isn't in the plan today, it will never exist.

The Hawthorne Alignment would be a disaster for local business and I strongly urge against this option. This alignment will maximize the impact on Hawthorne Blvd businesses with no access to the benefits. This alignment excludes stops anywhere between the 405 Freeway and the South Bay Galleria. This will transform our storefront into an active construction zone for years with no benefit. The heavy construction, lane reductions, and parking removal will gravely impact our business only to bypass the area. We have heard the struggles of businesses during major municipal construction projects, many of them do not survive the years of limited access and construction barriers. The ROW alignment allows Metro to build this vital infrastructure while preserving the commercial corridor along Hawthorne blvd.

Letter of Support – C/K Line Extension to Torrance FEIR Certification & Approval (Jan 2026 Board Meetings)

Dear Board Directors of LA Metro and South Bay Cities Council of Governments:

On behalf of South Bay Forward, a local grassroots advocacy organization focused on housing, transit, and mobility in the South Bay LA region, we write this letter in support of certifying the Final Environmental Impact Report (EIR) and approving the C/K Line Extension to Torrance.

By approving the project and moving forward with the Locally Preferred Alternative (LPA), we can provide a much-needed, once-in-a-generation rail connection between LA County and the South Bay. This project will attract millions of new riders, reduce travel times, and respond effectively to community concerns with mitigation measures and new amenities along the Metro ROW, while aligning with available funding and the Measure M schedule.

South Bay Forward is composed of over 600 members across the South Bay LA region in the cities of Torrance, the Beach Cities (Redondo Beach, Hermosa Beach, Manhattan Beach, El Segundo), Inland South Bay (Carson, Gardena, Hawthorne, Inglewood, Lawndale, Lomita), Harbor Area (Harbor City, Harbor Gateway, San Pedro and Wilmington), and the Palos Verdes Peninsula.

We have closely followed and strongly supported the project since our organization's founding in 2023 and have continued to support local and regional projects as part of Yes In My Backyard organizing to advance abundant housing and connected transit for a more affordable, accessible, and sustainable South Bay.

STRONG LOCAL AND COMMUNITY SUPPORT
We reiterate our support letters dated December 14, 2023 and May 22, 2024 in which we detailed our support for the Project on the Metro-owned right-of-way and Hybrid Locally Preferred Alternative. In March 2025, we responded to Metro's call for community-based organizations (CBO) to deliver outreach for the project. Over the past six months, we have tabled and hosted community events around the South Bay sharing information in our role as CBO. See **Appendix 1** for photos and written comment cards from our outreach activities. We have connected with over 700 individuals during outreach events along the corridor and have generated 10,000+ social media views. Responses from the public have been overwhelmingly positive, with the most common question being, "How soon will it be built?" This sentiment reflects the results of a 2023 phone-based survey showing 67% support for the project within the cities of Lawndale, Redondo Beach, and Torrance.

Additionally, this project is well-supported by dozens of community organizations, labor groups, and businesses as part of the South Bay On Board Coalition including: MoveLA, Streets for All, Abundant Housing LA, Downtown Torrance Association, Torrance Area Chamber of Commerce, Indivisible South Bay LA, Torrance Democrats, Streets Are For Everyone, and LA/OC Building & Construction Trades. Coalition support letters can be found in this Folder. This project has been long-supported by various South Bay cities, though they have differed on alignment preferences over the years. However, the cities of Redondo Beach and Torrance have invested over $45 million in new bus centers adjacent to the rail corridor in anticipation of future rail service. In May 2024, Metro Board selected the 170th/182nd Grade-Separated (Hybrid Alternative) as the Locally Preferred Alternative (LPA). The Final Environmental Impact Report (FEIR) was released in September 2025 responding to over 2,000 public comments with fact-based responses and clarifications.

REGIONAL IMPORTANCE

This project has been promised to South Bay residents since 1980 and has been identified as a top priority for rail service since 2009. In 2016, South Bay voters helped pass Measure M which promised the Green Line / C Extension as a priority rail project. With the updated operating pattern of the K Line and the recent opening of the LAX Metro Transit Center, this Project will now create a one-seat ride between Torrance, Redondo Beach, LAX, and Inglewood. Further connections can be made to Gateway Cities on the C Line and to the Westside and Downtown Los Angeles via the Metro E Line. Estimates project a 19-minute ride from Torrance to LAX and significant travel time savings between the South Bay and greater Los Angeles.

The South Bay suffers from congested streets and lack of rapid transportation options, resulting in long travel times for drivers and transit riders alike. Congestion is projected to worsen by 30% in 2045. The Project will create a fast and reliable transportation option to connect people by rail to jobs, schools, and services across the County with benefits concentrated in many Equity Focus Communities that will be linked along the Metro C and K Lines. With expansion of sporting facilities, housing, businesses, and jobs throughout the subregion, high-quality transit is a must.

STRONG FUNDING PLAN

The project is well-positioned for funding currently and is highly-competitive for state transportation grants following FEIR certification. The LPA is designed to not require federal funds, which is ideal within our current political landscape. The Board Report from May 2024 details the project has been allocated funding from Measure R at $272M, Measure M at $828.4M, TIRCP at $231.3M and SB1 at $9.0M. This totals to $1.34B.

Since 2023, cost estimates for the project have increased from $2.23B for Hybrid and $2.96B for Hawthorne to $2.7B for Hybrid and $3.44B for Hawthorne from the Draft to the Final EIR. Cost escalations are due to inflation, tariffs, contingency, and delays on the project (NYU Transit Costs Project). The project is over 52% funded for LPA. No project is fully funded at the Final EIR stage and this project is better positioned than nearly every project in the Metro portfolio. SBCCOG received this information via public comment in November 2025. See **Appendix 2** for funding levels of recent Metro light rail projects at FEIR approval.

Additionally, the project only becomes competitive for additional grants after the certification of the FEIR, when it can apply for state sources of funding under TIRCP, STIP, SB1, or other grants. Other sources of funding that could be explored for this project includes: ExpressLane revenue from I-110 and I-105 corridors and surplus highway funds from South Bay Measure M funds. Other jurisdictions have developed funding mechanisms to fund their Metro rail projects, like the West Hollywood's Enhanced Infrastructure Financing District for the K Line Northern Extension.

This is a highly cost-effective and grant-competitive project. Further delay, pause, or concern around FEIR certification could lead to further cost increases and jeopardize the project and its numerous benefits to the South Bay–relieving congestion, reducing VMT, boosting economic growth, serving jobs and schools. Please support South Bay's best chance of future rail.

JOBS, HOUSING, MOBILITY, & ENVIRONMENTAL BENEFITS

The Extension will help reduce 13.7 million vehicle miles and 1,905 metric tons of carbon dioxide equivalent (CO_2) per year, helping to combat climate change. The project will also attract around 1.5 million new Metro riders per year, expanding access to aerospace, government, manufacturing, and healthcare job centers in the South Bay and generate over 15,000 construction jobs to strengthen the South Bay economy.

The Final EIR indicates that no homes will need to be acquired for the LPA and that safety and noise mitigations for the project will improve the overall safety profile for residents who currently live near the freight line. The mitigations are thoughtful and comprehensive, reflecting a commitment to addressing concerns. Hawthorne Blvd costs nearly $1 billion more and faces enormous technical, engineering, and approval constraints with 2-4 more years of NEPA review, requiring federal funds and massive utility relocations including a regional stormwater drain. Proceeding with the Board-Selected Hybrid LPA provides an all-inclusive project that updates the aging rail corridor, adds neighborhood walking-biking paths, and connects directly to transit centers with parking, restrooms, and bus service.

Metro has safely delivered and operated projects with freight, light rail, and walking trails near homes such as the A Line in South Pasadena, Highland Park, San Gabriel Valley, and South LA and the E Line from Westwood to Bundy. The newly opened A Line to Pomona also contains a shared freight, light rail, and residential corridor from Irwindale to Pomona. Metro is building the Southeast Gateway Line in the communities of Southeast Los Angeles as a shared corridor with light rail, freight and utilities. The corridor widths and profiles are comparable to this project.

This project will address the jobs-housing imbalance in our subregion. The South Bay Galleria site near the Redondo Beach Transit Center has been approved for 650 new homes in anticipation of future rail service. The half-mile areas near the Redondo Beach and Torrance Transit Centers already qualify for SB 79 as part of the regional plan. Housing at these sites will require rail transit to mitigate traffic impacts. The LPA includes neighborhood biking and walking trails in Lawndale and Redondo Beach that will connect to existing and planned bike networks, improving first-last mile mobility for South Bay residents, workers, and students.

We ask that you approve and certify the Final EIR so that the project can prepare for design and construction. The C/K Line Extension to Torrance project is a critical component of Measure M promised to South Bay voters that will transform mobility in LA County, bolster the local economy, improve air quality, improve mobility and safety on the corridor, and provide additional benefits to low-income households and disadvantaged communities. Thank you for your leadership and for championing the Extension project for the South Bay and Los Angeles County.

Sincerely,

RE: **Item 11.1: C Line Extension to Torrance Project Final EIR Certification**
Redondo Beach's Support for Director Mitchell, Sandoval and Dupont-Walker's motion selecting the Hawthorne Alignment

Dear Board Chair Dutra and Honorable Board Members:

On behalf of the City of Redondo Beach, please accept this letter as Mayor Light and the City Council's unanimous (4-0-1) support for the motion by Directors Mitchell, Sandoval and Dupont-Walker selecting the Hawthorne alignment. We write to express how we envision working with Metro, Caltrans and our neighbors to advance the Project on Hawthorne Blvd. and we request that the Board approve the motion.

As a preliminary matter, Redondo Beach has consistently supported the C-Line Extension on Hawthorne, as it achieves the Project objectives, including but not limited to improving mobility, providing alternative modes of transit, and providing more equitable access to regional destinations, displacing the greatest amount of VMT and resulting in the greatest number of annual project trips.

The Hawthorne alignment increases commercial visibility instead of impacting and dividing a residential neighborhood. Some of the significant issues associated with the LPA option would be resolved with the Board's selection of the Hawthorne alignment. The Hawthorne Alternative, studied in depth in the draft and final EIR, resolves potential issues associated with selection of the LPA. In particular, the Hawthorne Alternative avoids relocation of utilities and high-risk construction activities associated with the LPA option. For these reasons among others, the Hawthorne Alternative provides the greatest return on regional investment.

If and when the Board certifies the FEIR and approves the Hawthorne Alternative, Redondo Beach is ready to:

- Expedite any necessary local approvals and permits to enable timely Project construction and reduce the risk of schedule delays;
- Expediently work through the Caltrans relinquishment process for Hawthorne Blvd. (SR 107) to enable local control of permitting and approvals;
- Collaborate with neighboring jurisdictions to centralize permitting for the Hawthorne option;
- Further advocate for funding for this Project at the South Bay Cities COG, specifically during the Measure M Decennial Review process commencing this year;
- Support expansion of the Business Interruption Fund to cover businesses impacted by Project construction along Hawthorne Blvd. to ensure their continued success;
- Pursue funds for first/last mile improvements for the South Bay Galleria station, and plan for our 3% local match contribution to the Project;

The City is also uniquely positioned to ensure traffic in Redondo Beach along Hawthorne Blvd. is managed efficiently with minimal disruption during construction. In that regard, the City also appreciates the Board's stated commitment to helping small businesses remain viable during and after construction.

The Hawthorne Alternative is the only Project alternative that meets the Project objectives, fulfills the Board's CEQA requirements, and delivers high ridership. Redondo Beach looks forward to working in partnership with Metro, Caltrans, the South Bay Cities Council of Governments and our neighbors to deliver high quality transit to the region.

Thank you in advance for your consideration of our comments.

Sincerely,

Kenneth Hahn Hall of Administration
500 W. Temple Street
Los Angeles, CA 90012

Dear Honorable Members of the Los Angeles County Board of Supervisors,

On behalf of Mychal's Café, a social enterprise dedicated to providing meaningful employment and community opportunities for adults with special needs, I am writing to express our strong support for the Metro C/K Line Extension to Torrance along the Hawthorne Boulevard alignment.

At Mychal's Café, our mission is rooted in creating inclusive spaces where adults with developmental and intellectual disabilities can thrive, contribute, and connect with the greater community. For many of our employees and participants, public transportation is not just an option, it is a lifeline. It provides independence, access to work, and a sense of belonging in a world that can sometimes feel out of reach.

The Hawthorne Boulevard alignment makes logical and human sense. It connects people with the places where everyday life happens, connections to businesses, services, and other people. As our region grows, we must remember that public transit should serve those who need it most: individuals who may not drive, who rely on buses and trains to reach their jobs, and who deserve to move through their communities with dignity and ease.

We urge the Board to plan carefully and thoughtfully, not simply to build quickly. This is an opportunity to design a transportation system that truly reflects our shared values of accessibility, inclusion, and community. Let's ensure this vital extension serves all residents, especially those whose voices are too often overlooked.

Thank you for your leadership and consideration.

With appreciation,
Sincerely,

[redacted]

RE: ITEM 11.1-C LINE EXTENSION TO TORRANCE PROJECT FINAL EIR CERTIFICATION; SUPPORT FOR THE MOTION BY DIRECTORS MITCHELL, SANDOVAL, AND DUPONT-WALKER SELECTING THE HAWTHORNE BLVD ALIGNMENT

My name is Theresa Masse and I recently moved my business, Paint ’n Pour, into the South Bay Galleria Mall. I am writing in support of extending the C-Line Extension down the Hawthorne Blvd alignment. The South Bay Galleria, my business, and all of the businesses along Hawthorne Blvd would greatly benefit from the transit being added to the established commercial corridor rather than through a residential area. We need the added foot traffic to keep our small businesses alive. All money aside, adding a Metro stop on Hawthorne Blvd just makes sense. Putting the alignment into a residential area, does not.

I fully support the City of Redondo Beach’s vision for advancing the Hawthorne alignment as the option that works best for the majority. I urge the Board to adopt the motion selecting the Hawthorne Blvd alignment.

Respectfully,
Theresa Masse

RE: Letter of Support – LA Metro C/K Line Extension to Torrance FEIR Certification & Approval

Dear Board Directors of LA Metro and South Bay Cities Council of Governments (SBCCOG):

South Bay Bicycle Coalition Plus supports certifying the Final Environmental Impact Report (EIR) and approving the C/K Line Extension to Torrance. Approving and moving forward with the Locally Preferred Alternative (LPA) will provide a much-needed, once-in-a-generation rail connection for travel throughout LA County and the South Bay.

This extension will connect with existing and future micro-mobility corridors such as the North Redondo Beach Bikeway, the Redondo Beach Blvd Metro Active Transportation project, and a potential multi-use path connecting the Torrance Transit Center to downtown Torrance. These among other first/last-mile connections via the South Bay Bicycle Master Plan and Local Travel Network will harmonize with the extended light rail to enable more convenient multi-modal trips throughout the region. SBBC+ welcomes the opportunity to work with cities, the SBCCOG, Metro, and the community to help shape future first-last mile connections to the new stations.

With connections between Torrance, Redondo Beach, and Inglewood (including a 19 minute ride from Torrance to LAX), this project will allow more people to take transit to get to work, travel, or events. The utility of transit is further increased when people can safely walk or roll to the train station for the first and last leg of their trip. Building this gets cars off the road, reduces congestion and emissions, and makes getting around safer and more convenient.

We ask the Metro Board of Directors to approve and certify the Final EIR so that the project can prepare for design and construction. The C/K Line Extension to Torrance project is a critical component of Measure M promised to South Bay voters that will transform mobility in LA County, bolster the local economy, improve air quality, improve mobility and safety on the corridor, and provide additional benefits to low-income households and disadvantaged communities. We thank you for your leadership and look forward to supporting your efforts for continued enhancement of our multimodal transportation network in the South Bay and Los Angeles County.

Sincerely,

Rod Kuhns, President
Liam Walsh

RE: LA Metro Letter of Support – C/K Line Extension to Torrance FEIR Certification & Approval
Hybrid LPA

Dear Directors of the LA Metro Board and Members of the South Bay Cities Council of Governments:

On behalf of **Downtown Los Angeles for All (DTLA4A)**, a chapter of Abundant Housing Los Angeles, I write in strong and unambiguous support of the **Locally Preferred Alternative (LPA)** for the K Line Extension to Torrance.

Los Angeles cannot meet its housing, climate, or mobility goals without a dramatic expansion of high-capacity rail. More housing without more transit is a dead end; more transit without decisive action is a missed opportunity. For a region as large and interconnected as ours, rail is *not* optional—it is the *only* scalable alternative to deepening congestion, rising emissions, and worsening inequality of access.

Our home of Downtown Los Angeles demonstrates what is possible when transit works. It is one of the few places in the county where residents can reliably live without a car, and many do. As a result, Downtowners rely on the system to access the city and the broader region—including areas like the South Bay. Yet vast areas of the South Bay—despite their cultural and economic importance and proximity to job centers—remain cut off from the Metro network, accessible only by car or by time-intensive bus trips. The K Line Extension is essential to correcting this imbalance, completing the region's transit spine, and finally connecting the South Bay to the nearly 100,000 residents of Downtown Los Angeles.

For these reasons, **we strongly and specifically urge approval of the Locally Preferred Alternative**. The LPA leverages an existing Metro-owned right-of-way, supports more functional and accessible station placement, and comes at a substantially lower cost than the Hawthorne option. At a moment of constrained public resources and urgent regional need, the LPA is the only alternative that credibly balances speed, cost, constructability, and long-term value. Choosing otherwise would introduce unnecessary delay, risk, and expense.

Los Angeles's 20th-century commitment to auto-dependence has left us with congested streets, polluted air, and limited mobility for those without cars. The task before this Board is to decisively build the infrastructure of the 21st century—one that connects people to opportunity, reduces

reliance on private vehicles, and allows our city to grow sustainably. Advancing the K Line Extension to Torrance through the LPA is not merely prudent policy; it is a necessary step toward a functional metropolitan future.

Accordingly, we respectfully urge the Board to certify the FEIR and approve the Hybrid Locally Preferred Alternative without delay.

We thank you for your leadership and continued commitment to building a more connected Los Angeles for all Angelenos.

Respectfully submitted,

Chapter Chair, Downtown Los Angeles for All

Members of the Board,

On behalf of AFSCME District Council 36 and the Supervisorial Employees of Local 3634, I am writing in support for Strengthening Transit Access and Mobility in the South Bay through the C Line Extension to Torrance Motion authored by Directors Mitchell, Dupont-Walker, and Sandoval. Improving and expanding access to transit is imperative to the working people of the county.

In addition to improving accessibility, this motion will lead to an investment in good union jobs that also ensure worker safety is prioritized. Increasing ridership not only lends to supporting our local economies, but it also helps to give long term employment opportunities that improve the quality of life for public sector working families. With these intentions, it is our hope that these positions created are fully protected. We would also like to express our opposition to PPP and are willing to discuss our position with the directors.

In Solidarity,

Subject: Support Item 11 reaffirming Hybrid Local Alternative Route on Existing ROW; Oppose Item 11.1

Dear Chair Dutra and LA County Metro Board members,

On behalf of Abundant Housing LA, I write in strong support of the staff-recommended Hybrid LPA for the C/K Line Extension to Torrance. Our organization is deeply concerned about a last-minute push to reject the Locally Preferred Alternative that the Metro Board selected a year and a half ago, in favor of a much more expensive route.

If the Metro board were to adopt the new motion, Metro would reopen the environmental review process, setting the project back years, if not killing it altogether. Worse, the ballooning cost would come at the expense of other important projects across the region. The equity implications of this new motion are profound, as a change in direction at this juncture would sacrifice a billion dollars in investments badly needed elsewhere.

By contrast, the Hybrid LPA, selected by the Board in 2024 and refined in the FEIR, uses the existing rail corridor with grade separations and mitigations to make the corridor both safer and quieter. It connects to new bus centers, and improves green space with bike and pedestrian paths. It is a comprehensive option with strong community benefits and a clear path to construction. While Metro has expanded rail across the County, the Extension to Torrance, promised in Measure R and Measure M, is long overdue. The Hybrid LPA has support by the City of Torrance, and dozens of local community, business, and labor organizations, in addition to mobility and housing organizations, like Abundant Housing LA.

The Hybrid LPA will allow Los Angeles to move forward, and we respectfully urge your support of Item 11 and ask for your opposition to Item 11.1.

Sincerely,

[redacted]

Scott Epstein
Director Policy and Research
Abundant Housing LA

LEAGUE OF WOMEN VOTERS® OF LOS ANGELES COUNTY

October 14, 2025

Dear Members of the Los Angeles Metro Board,

The League of Women Voters of Los Angeles County strongly supports the C/K Line Extension to Torrance. We are writing to urge you to approve the board-identified Locally Preferred Alternative, certify the Final Environmental Impact Report (FEIR) and adopt in accordance with the California Environmental Quality Act (CEQA) the findings of fact and the Mitigation Monitoring and Reporting Plan (MMRP).

This extension would directly link the 3rd (Torrance-Carson) and 4th (LAX) largest job centers in Los Angeles County. Transfer to the E Line extends the reach to the 2nd largest (DTLA) job center. When the Sepulveda Corridor line reaches Metro LAX station or K line northern extension reaches Wilshire (Phase 1), the South Bay will have a fast, grade-separated rail trip to the Westside. All four of the largest job centers in Los Angeles County would be linked by rail. For the sustainability and economic vitality of the region, we simply must proceed with this project.

LWV California Transportation Policy supports transit that lowers vehicle miles traveled (VMT), is efficient, convenient, cost-effective; is safe and secure; serves all segments of the population and diverse geographic needs; minimizes harmful effects on the environment; and is integrated with land use. Additionally, LWV California Climate Change Action Policy supports a clean, sustainable low-carbon energy economy that includes all forms of transportation infrastructure and land use policies that reduce automobile dependence.

This project would support all of those goals. A mass transit network of regional importance should not be subject to vetos for each segment. Please certify the FEIR and approve the Locally Preferred Alternative.

Thank you,

RE: Metro C Line (Green Line)/ K Line Extension to Torrance Project
January 22, 2026 Metro Agenda

Item 11 #2025-0818 – OPPOSE (the Board selected Locally Preferred Alternative – LPA)

Item 11.1 #2026-0037 – SUPPORT (Approve the Hawthorne Option)

Dear Chair Dutra and Honorable Board of Directors:

I am writing to affirm my support for the **Hawthorne Boulevard Alignment route option**, which I believe represents a safer and more viable route for commuters to and from the South Bay region of Los Angeles County.

Metro's Locally Preferred Alternative would result in hundreds of trains operating daily, at grade, through narrow residential neighborhoods and in close proximity to homes and schools within Lawndale and Redondo Beach. This approach would produce increased noise, air pollution, and safety risks, while eliminating valued green space that residents rely upon and enjoy. In contrast, the Hawthorne Boulevard route better advances regional transportation objectives by providing alternative travel options, improving connectivity between local and regional transit systems, and supporting greenhouse gas emission reduction initiatives.

In addition, I respectfully request that Metro establish a Business Interruption Fund for the Project and expand construction mitigation programs to support and assist businesses located along Hawthorne Boulevard during and after construction. These measures will be essential in preserving economic vitality and reducing construction related impacts on locally owned businesses along the corridor.

I submit this letter as my official position and support for the Hawthorne Boulevard Alignment route option. I affirm my commitment to work collaboratively with my Council colleagues, city staff, Metro, and project partners to expedite approval processes, advocate for additional funding, and support the successful implementation of the Hawthorne Boulevard Alignment route option for the good of City residents and businesses.

Sincerely,

[redacted]

Robert Pullen-Miles
Mayor
City of Lawndale

Re: Item (11) METRO BOARD OF DIRECTORS AGENDA C LINE EXTENSION TO TORRANCE PROJECT FINAL ENVIRONMENTAL IMPACT REPORT CERTIFICATION FOR THE C LINE PROJECT (SCH#2021010269)/CITY OF LAWNDALE COMMENTS – **LAWNDALE COMMENTS AGAINST STAFF RECOMMENDATION**

Dear Chair Dutra and Metro Board of Directors:

On behalf of the City of Lawndale (the "City" or "Lawndale"), Aleshire & Wynder LLP, as the City's retained special counsel in this matter, respectfully submits this letter in opposition to the proposed certification of the Final Environmental Impact Report, State Clearinghouse No. 2021010269 (FEIR) for the C Line Metro extension to Torrance ("Project") under the California Environmental Quality Act (Pub. Resources Code § 21000 *et seq.,* ["CEQA"]) and the recommendation to the Board to approve the "Locally Preferred Alternative" as set forth in Item 11 for the January 22, 2026 Board meeting. This letter does not address the proposal for the selection of the Hawthorne Alignment set forth in Agenda Item 11.1. Lawndale respectfully objects to the FEIR as currently prepared because it is legally flawed as it does not properly and adequately identify, analyze, and mitigate the Project's significant environmental impacts on the Lawndale community.

Metro's responses in the FEIR to the City's detailed comments on the Draft Environmental Impact Report ("DEIR") ("Submission 22" – Letter dated March 27, 2023 attached as Exhibit "A"), along with the findings in the Statement of Overriding Considerations ("FSOC") and the proposed Mitigation Monitoring and Reporting Program ("MMRP"), fail to resolve fundamental deficiencies in the FEIR's analysis, identification, and mitigation of significant impacts across several environmental areas of public concern such as (1) NEPA applicability (including improper segmentation); (2) Air Quality (DEIR, § 3.4); (3) Greenhouse Gas Emissions ("GHG")(DEIR, § 3.5); (4) Noise/Vibration (DEIR, § 3.6) and (5) Aesthetics (DEIR, § 3.3).

The FEIR's baseline analysis is legally deficient because it characterizes Project operations as a mere continuation of existing rail activity, thereby obscuring the fact that increasing rail frequency from approximately two freight trains per day to over 200 light rail crossings constitutes a distinct and substantial physical change to the environment. This inaccurate baseline analysis causes the FEIR to underestimate the Project's significant environmental impacts, including the disruption of neighborhood connectivity, the deterioration of community cohesion, the unmitigated loss of valued recreational resources, and the significant and ongoing noise and vibration impacts of constant rail activity mere feet from residential homes. **Before voting on Item 11, the City strongly encourages each Board Director to visit the portion of the proposed Right of Way that runs through and splits a peaceful residential neighborhood in Lawndale to fully appreciate the permanent and significant impacts the exponential increase in train trips through the neighborhood will have on this neighborhood.**

Separately, Metro's growth-inducing and cumulative impacts discussion is now legally flawed in light of newly enacted state legislation that has transformed development standards for properties within a one-half mile of a major transit stop ("TOD Stop") and new precedent setting case law. As the Fourth District Court of Appeal (decided October 2025), in *Save Our Access v. City of San Diego* (2024), CEQA requires an agency to analyze the "physical conditions" that will foreseeably result from a project's approval, particularly when a change in development standards creates a reasonable likelihood of denser or taller structures (14 Cal. 5th 311,338–39). The removal of a height limit was held to be a distinct physical change requiring analysis of how taller buildings might alter air dispersion and community character. (*Save Our Access*, supra, at 338-339). Here, the enactment of Senate Bill 79 ("SB 79")[1] (signed October 10, 2025) eliminates any plausible claim that significant changes in transit-adjacent development patterns are speculative. **Qualifying SB 79 projects will now proceed through state-mandated ministerial, non-discretionary approvals, with no environmental review.**

There will be no meaningful subsequent project-level environmental review and/or requirement that TOD developments conform with local zoning regulations as the DEIR suggests will occur in the Transportation (DEIR, § 3.1) and Land Use (DEIR, § 3.2) sections. The FEIR must therefore analyze the Project's growth-inducing effects and

[1] SB 79 (Gov. Code, §§ 65912.155–65912.162) mandates ministerial approval for high-density housing near "major transit stops," defined under Pub. Resources Code § 21064.3 to include the proposed C Line rail stations. For "Tier 2" stops, the approval radius is one-half mile in cities with populations ≥35,000, and 1/4 mile in cities <35,000. While SCAG's "Connect SoCal 2024" forecast projects Lawndale's population to remain below 35,000 through 2050 (est. ~34,800), this linear projection fails to account for the induced growth SB 79 itself will trigger once rail service begins. In contrast, Redondo Beach (est. ~71,800) and Torrance are already well above the 35,000 threshold, immediately activating the wider one-half mile upzoning radius.

cumulative impacts now, as these potentially significant impacts from ministerially approved large development projects will not be environmentally assessed in the future.

The following list outlines the City's comments and concerns in more detail.

1. **General Comments:** The FEIR's responses to the City's comments (FEIR § 5.3 Responses to Public Agencies, Submission 22), FSOC, and proposed MMRP remain legally insufficient. The FEIR remains legally inadequate because agency responses to Lawndale's detailed comments do not cure core CEQA defects. Several key mitigation approaches remain either premised on an inaccurate baseline, improperly segmented from related actions, or deferred in a manner that prevents informed public decision-making.

   The FEIR's baseline analysis is particularly flawed because it minimizes the Project's real-world severance effects by characterizing existing ROW use solely through its legal freight designation, rather than the actual physical conditions and community use patterns described by the City. The FEIR further continues to piecemeal review by treating the Project as having "independent utility" while avoiding analysis of the Project's functional role in the broader rail network and the localized cumulative burdens that will concentrate in Lawndale.

   In addition, the FEIR's NEPA/funding analysis relies on a current proposal framing that disregards the Project's substantial funding gap and the reasonably foreseeable need for federal funding and attendant federal review. This approach risks improper segmentation of environmental review and financing strategy.

   The FEIR also fails to adequately address aesthetic and lighting impacts (including the corridor's existing greenbelt function and potential dynamic lighting effects), and it improperly defers key construction planning (including the Construction Traffic Management Plan), depriving Lawndale and the public of the ability to evaluate neighborhood ingress/egress and safety impacts.

   Finally, Metro's noise and vibration analysis remains deficient because it fails to provide clear disclosure not only of the maximum levels of noise associated with construction and operation but also the sudden increases in noise levels over ambient noise levels from the construction and operation of the Project which interrupt sleep patterns,disrupt daily activities and foreseeably result in long term health effects on those exposed to this constant noise.

   The image below illustrates the exceptionally close proximity of the rail alignment and demonstrates how the frequent daily train movements would occur

immediately next to homes. The DEIR's reliance on averaged noise thresholds and modeling assumptions materially understates the real-world intensity, frequency, and significance of operational noise impacts at this location.

Figure 1: Intersection of 170th Street/Metro ROW in Lawndale, CA

Furthermore, the DEIR acknowledges that frequent light-rail operations through residential portions of the corridor will generate ongoing wheel–rail noise, propulsion noise, braking noise, and repetitive pass-by events throughout the day and evening, with sensitive receptors evaluated based on predictive modeling rather than site-specific verification (DEIR §3.6-2.2.3, pp. 3.6-18 to 3.6-21). Soundwalls are proposed only along limited segments of the alignment and expressly terminate where geometric and access constraints exist, including at the 170th Street and 182nd Street crossing areas, leaving nearby residential clusters exposed to unattenuated rail noise (DEIR p. 3.6-101).

Although the FEIR includes corrections and design refinements, it does not revise the operational noise modeling methodology or demonstrate that mitigation measures will reduce corridor-wide operational noise below applicable FTA significance thresholds (FEIR, Ch. 4, Corrections and Additions, pp. 4-37 to 4-38). CEQA does not permit reliance on uncertain or incomplete mitigation to support a less-than-significant impact finding (*Sundstrom v. County of Mendocino* (1988) 202 Cal.App.3d 296, 307–309), nor may an agency assume mitigation effectiveness without substantial evidence demonstrating that impacts will in fact be reduced below significance (*Communities for a Better Environment v. South Coast AQMD* (2010) 48 Cal. 4th 310, 322–323).

Accordingly, substantial evidence in the administrative record supports the conclusion that operational noise impacts will remain significant and ongoing along the corridor, and the mitigation framework identified in the DEIR and FEIR is inadequate to ensure compliance with CEQA over the life of the project.

Finally, the air quality and GHG analyses improperly lean on regional modeling assumptions that do not substitute for disclosure and mitigation of localized construction-period health risks and foreseeable changes in development intensity and building form.

1.1 **Baseline Conditions**: The FEIR continues to not adequately address or establish accurate baseline conditions as to environmental subjects throughout the entire FEIR; this failure to not appropriately characterize and analyze existing baseline conditions thwarts CEQA's statutory mission to analyze and disclose significant environmental changes so that a lead agency may appropriately and legally mitigate significant environmental impacts. Without accurate baseline conditions, the veracity and validity of subsequent environmental analysis is compromised. Specifically, Metro's response to Lawndale's concerns regarding Impact 3.2-4.1 (Divide an Established Community) is legally deficient because it relies on baseline conditions that ignore the physical reality documented in Lawndale's comment letter. As noted in Lawndale's comment (Submission 22, Comment 22-2) the increase in the number/frequency of rail interruptions is significant; the FEIR states that the Project would not physically divide the community because rail crossings are only occasional and there are still opportunities to cross at Manhattan Beach Boulevard, between Inglewood Ave and Firmona Avenue. However, the current physical baseline is a connected community where the ROW functions as accessible recreational and open space connecting the east and west sides of the City (Submission 22, Comment 22-115). Metro's response (FEIR 5.2-10, MR-10 Changes to Community Character) dismisses the recreational and open space use of the community as merely an unauthorized use.

CEQA requires that baseline conditions reflect current operations not merely legal use or what theoretically should occur. Courts have long held that the CEQA baseline must reflect "existing physical conditions," not legal entitlements. (*Communities for a Better Environment*, supra, 48 Cal.4th at pp. 322–323.) Furthermore, as Lawndale pointed out regarding the disruption of "day-to-day recreational features" (Submission 22, Comment 22-31*), Fat v. County of Sacramento* (2002) 97 Cal. App. 4th 1270 holds that even unpermitted or "illegal" historical uses constitute the valid

environmental baseline. By characterizing the ROW solely by its legal freight designation rather than its actual recreational function, Metro creates a baseline that artificially erases the project's significant impact: the physical severance of a community that is currently connected, and the degradation of important recreational and cultural resources.

1.2 **Improper Piecemealing**: By relying solely on Southern California Association of Government's ("SCAG's") regional growth projections to analyze potential development and cumulative impacts, the FEIR avoids analyzing the localized cumulative burden of constructing and operating this segment simultaneously with connecting projects. The recent passage of SB 79 fundamentally alters this analysis. The new stations are now crucial functional elements of a larger development scheme mandated by state law.

The new proposed light rail stations serve as the legal trigger for SB 79's applicability. Without them, the ministerial approval provisions do not apply. This creates precisely the situation courts have identified as improper segmentation: where the reviewed project "legally compels or practically presumes completion of another action." (*Banning Ranch Conservancy v. City of Newport* (2012) 211 Cal. App. 4th 1209, 1224.) The C Line extension is no longer merely transportation infrastructure; it is the catalyst that activates mandatory housing densification under state law. Metro's current approach impermissibly "chopped a large project into many little ones" to minimize apparent environmental impacts, a practice explicitly prohibited by *Bozung v. Local Agency Formation Com.* (1975) 13 Cal. 3d 263.

1.3 **NEPA Applicability**: Artificially separating the project from likely federal funding to avoid federal scrutiny constitutes improper segmentation. Lawndale's Submission 22 raised legitimate concerns regarding federal funding and NEPA compliance. Metro's dismissal of NEPA applicability (Response to Submission 22, Comment 22-8) rests on a precarious "current proposal" argument that contradicts the Project's financial reality. The response asserts NEPA does not apply because "no federal agency currently holds discretionary authority" and the project is funded by local/state sources. However, there continues to be a significant funding gap; project costs exceed $1.96 billion while secured local/state funding is approximately $900 million (Response to Submission 22, Comment 22-11). Given that Metro previously sought federal funding for this very corridor (Response to Submission 22, Comment 22-10) and has a demonstrated history of pivoting to federal grants to close such gaps, it is reasonably

foreseeable that federal funding (and thus NEPA oversight) will be required. By finalizing the EIR without an EIS component, Metro is effectively segmenting the financial and environmental review process to avoid federal scrutiny now, only to likely seek it later. This violates the spirit of transparency required by CEQA and creates a risk that the "cost-effective" project objective (Response 22-12) is being pursued via a defective environmental clearance strategy. Uncertainty here creates a gap in environmental analysis.

1.4 **Aesthetics/Visual Impacts**: CEQA Guidelines § 15064.7 requires a lead agency to conduct a threshold analysis to determine the significance of an environmental impact; the analysis is required to be supported by substantial evidence and to reflect the full scope of a project's potential environmental impacts. By dismissing the corridor's established greenbelt function and local scenic value, the "Aesthetics" threshold analysis in Section 3.3 of the DEIR is fatally flawed. As a result of this omission, the FEIR fails to meet its obligation to identify, study, and mitigate significant aesthetic impacts arising from the Project.

1.4.1 **Local Regulations:** (DEIR, § 3.3-1.3) The FEIR fails to demonstrate how the Project meets the City of Lawndale's policies and regulations regarding open space and recreational resources. The RSA as depicted, does not adequately identify or evaluate existing conditions of open space currently used by residents for recreation. The FEIR also omits key points of interest along the existing right-of-way that support walking, biking, and other recreational activities. As a result, the analysis improperly narrows the significance threshold which ignores how project-related changes could disrupt these recreational uses. For example, the proposed walking path would alter or interfere with day-to-day recreational activities currently enjoyed by Lawndale residents. Lawndale's General Plan and policies emphasize the protection of the City's limited recreational spaces as essential to residents' quality of life, yet the FEIR fails to assess whether the Project would significantly diminish these functions, in violation of CEQA Guidelines § 15064.7 and its requirement to analyze environmental impacts based on substantial evidence.

The FEIR asserts that "because the greenway is not specifically protected by any applicable local general plans, planning and zoning codes, or other regulations, this greenway is not considered to be a visual resource." (DEIR, § 3.3-22)

This conclusion and any resulting analysis is inadequate. The FEIR fails to recognize that Lawndale's General Plan Open Space Element explicitly applies to this corridor and that the greenway provides both aesthetic value and opportunities for recreational activity. By disregarding these functions, the FEIR applies an overly narrow threshold of significance that improperly excludes a vital visual and recreational resource. Under CEQA Guidelines § 15064.7 the finding that an impact is insignificant must be based on substantial evidence and account for environmental impacts. By dismissing the greenway solely because it lacks formal protection, the FEIR fails to meet this standard.

1.4.2 **Unaddressed Open Space Areas**: The FEIR fails to adequately assess potential aesthetic and recreational impacts associated with the proposed elevated rail structure and freight track along the existing railway corridor, which is identified in Lawndale's General Plan Open Space Element as open recreational space. The analysis does not account for the fact that the corridor currently has no overhead wires, abundant vegetation, and accessible space that residents use for recreation. Adding the light rail system, along with ancillary structures and the overhead wires, will significantly impact the aesthetics of 11.04 acres of recreational land within Lawndale. By failing to recognize the corridor's open-space and recreational functions, the EIR's inadequately overlooks the Project's potential significant aesthetic and recreational impacts.

Therefore, to the extent Metro holds that "visual impacts in urbanized areas are assessed based on the potential of a project to conflict with applicable zoning and other regulations governing scenic quality" (DEIR § 3.3, p. 3.3-59), the FEIR fails its own stated standard. As demonstrated in the examples above, visual impacts to Lawndale recreation areas directly conflict with the City's General Plan Open Space Element, leaving the FEIR's analysis thereof legally insufficient. By relying solely on regulatory compliance as a threshold of significance, the EIR applies an improperly narrow standard that ignores substantial evidence of environmental effects.

1.4.3 **Light/Glare Impacts:** The FEIR fails to adequately assess aesthetic impacts associated with issues of light and glare from Project

operations and applies an improperly narrow threshold of significance.

The FEIR relies on a comparison between existing stationary light sources at the Redondo Beach (Marine) Station and the proposed Project, concluding that the Project would not generate substantial glare because the existing station does not. This comparison is conclusory, over-generalized, and fundamentally flawed. It ignores the dynamics of moving rail vehicles, which produce strobing reflections across unmitigated surrounding surfaces. The FEIR does not model or analyze these dynamic strobe-light effects, which could significantly affect recreational areas and greenbelt corridors by creating visual discomfort and interfering with the use and enjoyment of these spaces.

Similarly, the FEIR fails to address the introduction of lighting from rail vehicle headlights, which will impact certain residences, street vehicles, surrounding businesses, and public recreational areas. Maintenance lighting is similarly unexamined beyond the unsupported assertion that it will comply with unspecified Metro design standards. No evidence or modeling is provided to substantiate these claims.

While the DEIR observes that shade and shadow patterns from Project-related structures "would change throughout the day and seasonally," and notes that such changes could create "adverse shadow impact" to recreational facilities; there is no mention of impacts to surrounding street, pedestrian, residential or other viewsheds. (DEIR, § 3.3, 3.3-7.1) The failure to assess both stationary and dynamic lighting impacts in the context of existing recreational and greenbelt uses demonstrates that the thresholds of significance applied are too narrow and ignore substantial evidence of potential aesthetic impacts. Nor does the FEIR identify or analyze structures that may pose undeviating areas of shadow over adjacent streets, thoroughfares, or buildings (including residences).

1.5 **Noise Impacts**: The DEIR's analysis of construction and operational noise and vibration impacts is legally flawed and fails to clearly disclose the nature and extent of the project's significant noise and vibration impacts upon sensitive receptors and uses.

For impacts related to construction noise, the analysis focuses on maximum noise levels; "For residential uses the threshold is 90 dBA for daytime construction and 80 dBA for nighttime construction. Commercial and industrial uses are held to a 100-dBA daytime and nighttime noise construction threshold." (DEIR, § 3.6, pg. 3.6-32). However, to comply with CEQA, the noise analysis must not merely focus on maximum noise levels but also must determine if the increases in noise levels from ambient levels separately create significant impacts. (*King & Gardiner Farms*, *LLC v. County of Kern* (2020) 45 Cal. App. 5th 814, 894.) Furthermore, the analysis of the potential health impacts from construction noise is legally inadequate.

The following is the entirety of the analysis:

> "*Regarding health effects of noise, it is unlikely for construction noise to result in noise-induced hearing loss for persons residing or working near construction zones, as this is an occupational hazard related to working over long periods of time (years) in high noise environments. However, construction noise could increase stress at affected sensitive uses*." (DEIR, § 3.6, p. 3.6-34.)

With regard to the potential impacts on hearing as a result of these significant and unavoidable construction noise impacts, the analysis dismisses impacts on hearing of sensitive receptors because, "this is an occupational hazard related to working over long periods of time (years) in high noise environments." (DEIR, § 3.6, p. 3.6-34.) This project will require "years" to construct. (DEIR, § 3.6, p. 3.6-31 ["*Construction of the Proposed Project would take place over the course of approximately five years*"].) Accordingly, sensitive receptors will be exposed to the excessive levels of construction noise for years. Finally, with regard to stress the analysis addresses it in a single sentence: "However, construction noise could increase stress at affected sensitive uses." No analysis is provided to discuss what would cause the stress and how stress can result in physical symptoms. This same level of health risk analysis is repeated throughout DEIR Section 3.6 (see DEIR, § 3.6, pp. 3.6-43 [Trench Option], 3.6-46 [Hawthorne Option], 3.6-48 [Operational Impacts]). This truncated analysis of a Projects potential health effects was rejected by the Supreme Court in *Sierra Club v. County of Fresno* (2018) 6 Cal. 5th 502, 522, 527.

By way of example, public health research demonstrates that transportation noise, including rail noise, may cause adverse health effects at levels well below those associated with permanent hearing damage. Contrary to the DEIR's cursory treatment, the health impacts of noise exposure are not limited to occupational hearing loss but include well-documented non-auditory effects such as sleep disturbance, chronic stress responses, and increased cardiovascular risk. Large-scale epidemiological research has found that repeated exposure to transportation noise disrupts sleep continuity and efficiency, triggers physiological stress responses such as an increase in stress hormones such as cortisol, and contributes to adverse cardiometabolic effects, including elevated blood pressure and hypertension. (See Münzel et al., *Transportation Noise Pollution and Cardiovascular Disease*, *Circulation Research* (2024)[2]; Wicki et al., *Associations of Exposure to Transportation Noise with Sleep and Cardiometabolic Health*, *Environmental Research* (2025)[3]). Railway-specific noise exposure has likewise been associated with increased hypertension risk in residential populations subjected to chronic rail noise events. (See Sørensen et al., *Exposure to Road Traffic and Railway Noise Linked to Elevated Blood Pressure*, *Environmental Health* (2011)[4]). These effects arise from the frequency, predictability, and duration of noise events rather than from peak sound levels alone, making them particularly relevant to residential receptors adjacent to a high-frequency light-rail corridor.

The DEIR dismisses potential hearing impacts on the ground that such effects are an occupational hazard associated with long-term exposure in workplace environments (DEIR, § 3.6, p. 3.6-34), yet simultaneously acknowledges that construction of the Project would occur over a period of approximately five years (DEIR, § 3.6, p. 3.6-31), during which nearby residents would experience sustained exposure to elevated construction noise. With respect to non-auditory health impacts, the DEIR limits its analysis to a single conclusory statement that construction noise "could increase stress at affected sensitive uses," without explaining the mechanisms by which stress occurs or disclosing its reasonably foreseeable physical consequences, including sleep disruption and cardiovascular strain (DEIR, § 3.6, p. 3.6-34). This incomplete discussion is repeated throughout the analysis of construction and operational noise impacts for the Trench Option, the Hawthorne Option, and long-term rail

[2] https://www.ahajournals.org/doi/epub/10.1161/CIRCRESAHA.123.323584

operations (DEIR, § 3.6, pp. 3.6-43, 3.6-46, 3.6-48), despite extensive scientific evidence confirming that chronic exposure to transportation noise produces measurable adverse health outcomes in residential settings.

CEQA requires more than a passing acknowledgement that noise may cause stress; it requires a reasoned analysis that meaningfully discloses the nature and severity of a project's reasonably foreseeable health consequences (*Sierra Club v. County of Fresno*, *supra*, 6 Cal. 5th at pp. 522, 527). By failing to address these well-established health risks, the DEIR understates the true severity and duration of the Project's noise impacts and deprives decision-makers and the public of the information necessary to fully evaluate those impacts under CEQA.

1.5.1 **"Quiet Zones" (MM-NOI-4):** The DEIR's conclusion that operational noise impacts will be mitigated relies improperly on the establishment of "Quiet Zones," a process Metro admits is entirely outside its control. The DEIR classifies the "Quiet Zone Equipment Installation" (PF-NV-1) as a feature "contingent upon future CPUC authorization" and acknowledges that the actual establishment of the zones requires the Cities of Lawndale, Redondo Beach, and Torrance to successfully petition the Federal Railroad Administration (FRA). (DEIR, § 3.6, p. 3.6-21.) Mitigation Measure MM-NOI-4 merely requires Metro to "cooperate" with these cities to "provide support and guidance," but fails to provide a back-stop if the FRA denies the application. (DEIR, § 3.6, p. 3.6-102.) CEQA prohibits reliance on mitigation measures that depend on the uncertain actions of third-party agencies. By Metro's own admission, if these third parties do not or cannot implement the Quiet Zones, the Project's noise impacts will remain "significant and unavoidable." (DEIR, § 3.6, p. 3.6-64 [conceding that if "local jurisdictions do not apply for a quiet zone...the impact would be significant and unavoidable"].)

Consequently, the FEIR cannot legally rely on MM-NOI-4 to support a finding of mitigation feasibility when the "essential element" of the measure is speculative and unenforceable by Metro.

1.5.2 **Sound walls (MM-NOI-2)**: While MM-NOI-2 prescribes the construction of extensive sound walls to dampen noise levels, the DEIR fails to analyze the secondary environmental impacts (specifically visual blight and community severance) caused by these structures. The DEIR identifies over a dozen distinct locations for

these walls, including "edge-of-track" barriers running continuously between residential streets such as 164th and 170th Street. (DEIR, § 3.6, p. 3.6-101, Table 3.6-26.) Although the DEIR briefly mentions that "materials, color, landscaping... would also be integrated... to minimize dominance and scale," this passing reference serves as a concession that the walls *will* possess a dominant scale potentially incompatible with the neighborhood character. (DEIR, § 3.6, p. 3.6-97.) A promise to merely "minimize" dominance through future design choices does not constitute a valid impact analysis. In fact, the sound walls will destroy the use of this area for any passive recreational uses currently available to families living in this residential area transacted by the rail right of way. The FEIR must study whether erecting permanent physical barriers through the heart of the community creates a significant new aesthetic impact or physically divides an established community, rather than deferring this critical analysis to the "final design" phase where public scrutiny is absent. (DEIR, § 3.6, p. 3.6-100.)

1.6 **Vibration Impacts:** Operational vibration mitigation measures remain legally and technically inadequate because they are largely deferred, lack enforceable, receiver-specific commitments, and rely on unproven assumptions about future performance reductions. The DEIR acknowledges that, absent mitigation, operations would exceed FTA vibration-annoyance criteria at a "total of 267 residences." (DEIR, § 3.6, p. 3.6-93.) Specifically, the analysis reports worst-case operational vibration levels reaching 93 VdB for light rail and 88 VdB for freight in affected segments. These are levels far exceeding the applicable residential thresholds of 72 VdB for frequent light rail events and 80 VdB for infrequent freight events. (DEIR, § 3.6, pp. 3.6-93, 3.6-94 [Table 3.6-23, Table 3.6-24].) Yet, the FEIR's proposed operational mitigation (MM-VIB-4 Low Impact Frogs; MM-VIB-5 Resilient Fasteners; MM-VIB-6 Ballast Mats) is framed merely as a future possibility that "could provide a combined vibration reduction of up to 15 VdB," rather than a demonstrated, site-specific performance commitment ensuring that each affected Lawndale residence will actually be reduced below the significance threshold. (DEIR, § 3.6, p. 3.6-94.)

Metro seeks FEIR certification without disclosing the specific efficacy of mitigation at impacted locations, stating instead that a "site-specific Detailed Vibration Assessment" will be conducted only after project approval to "confirm" impacts. (DEIR, § 3.6, p. 3.6-3.) This deferral is critical because

the DEIR admits that 133 residential structures face significant vibration damage risks during construction alone, yet Metro offers no evidence *now* that the deferred measures will work for these specific older homes. (DEIR, § 3.6, p. 3.6-88.)

By postponing the "Detailed Assessment" until after the environmental review process is complete, Metro denies the public and decisionmakers the ability to evaluate whether the promised measures (MM-VIB-4 through MM-VIB-6) are actually feasible or sufficient to reduce vibration to less-than-significant levels, failing to provide the substantial evidence required by CEQA to support a finding of mitigation effectiveness. (DEIR, § 3.6, p. 3.6-94.)

1.7 **Air Quality Impacts During Construction/and Operations:** The FEIR improperly uses regional VMT reductions to "net out" acute, localized public health risks from diesel particulate matter (DPM) during the 6-year construction window. The DEIR acknowledges that construction will last from "spring 2027" to “early 2023,” exposing Lawndale residents to six years of heavy-duty diesel exhaust. (DEIR, § 3.4, p. 3.4-16.) While the analysis identifies diesel particulate matter (DPM) as the "primary driver of ambient carcinogenic risks" in the basin (DEIR, § 3.4, p. 3.4-23), it improperly dismisses these acute, localized construction risks by pointing to the Project’s long-term regional benefits. Specifically, the DEIR relies on the "elimination of passenger vehicle trips" and regional VMT reductions years in the future to categorize the Project as a "sustainable transportation project," effectively allowing these hypothetical future regional benefits to mask the significant, near-term health risks imposed on local residents. (DEIR, § 3.4, pp. 3.4-19, 3.4-53.) CEQA requires a distinct analysis of short-term construction impacts; Metro cannot "net out" the actual cancer risk posed to a child living next to the construction zone today with a theoretical regional emission reduction realized a decade from now.

1.7.1 **Reliance on Zero-Emission Trucks:** Reliance on "feasible" zero-emission trucks without a mandatory backup plan constitutes a failure to mitigate significant impacts. The DEIR’s conclusion that construction health risks will be "less than significant" rests entirely on the assumption that contractors will comply with the Metro Green Construction Policy. (DEIR, § 3.4, p. 3.4-23.) However, this policy is riddled with unenforceable loopholes, requiring the use of Tier 4 off-road equipment and grid-based electric power only "where feasible." (DEIR, § 3.4, p. 3.4-9.) The DEIR fails to define "feasible" or provide

a mandatory backup plan (such as reduced daily activity limits or alternative fuel requirements) if a contractor claims that zero-emission or Tier 4 equipment is commercially unavailable. By relying on a mitigation measure that allows the contractor to opt-out based on their own determination of feasibility, Metro fails to ensure that the significant DPM emissions identified in the analysis will in fact be mitigated.

1.7.2 **Foreseeable Development Impacts on Air Quality**: In *Save Our Access*, the court held the City failed to analyze how taller buildings could interact with air flow or atmospheric conditions that dissipate emissions/odors and thus potentially change pollutant concentrations or odor effects especially where the earlier modeling assumed lower-rise physical conditions. (*Save Our Access*, supra, at 338).

The dramatic increases and building height development standards and subsequent likely development of taller buildings should be analyzed. The Court held CEQA analysis cannot ignore the distinct physical consequences of taller buildings, including altered air dispersion/atmospheric interactions, as well as potentially greater construction and operational emissions from more intensive construction methods and building form.

1.8 **Green House Emissions Impacts**: The DEIR's analysis of Greenhouse Gas (GHG) emissions is fundamentally flawed because it fails to account for the reasonably foreseeable indirect impacts of increased building heights and density that will be enabled by the Project. The DEIR presumes that because the Project itself is a transit extension, it will automatically result in a net reduction of emissions through VMT displacement. However, this "net benefit" calculation ignores the substantial construction and operational emissions associated with the transit-oriented development (TOD) that the Project is explicitly designed to catalyze. Courts have held that an agency cannot postpone ("tier" or defer) CEQA review of the reasonably foreseeable environmental effects of allowing substantially taller buildings when the agency already has enough information to evaluate those effects at the program stage. Even if overall allowed dwelling-unit density remains the same, increased height changes the physical development pattern in ways that can create distinct impacts (e.g., noise, air quality, biology, geotechnical conditions), so those potential impacts must be disclosed and analyzed before project approval rather than left to

later, site-specific review. (*Save Our Access v. City of San Diego* (2025) 115 Cal. App. 5th 388, 414–415.)

Additionally, by failing to quantify the GHG impacts of the physical "change in the environment" (taller buildings, etc.) that the Project will induce, the DEIR underestimates the cumulative GHG burden on the South Bay region, rendering its "Less Than Significant" conclusion unsupported by substantial evidence.

2. The FEIR's Analysis of Growth-Inducing Impacts and Cumulative Impacts is Now Legally Deficient Due to the Foreseeable Significant Environmental Impacts of SB 79 Transit Development.

2.1 **Requirement to Analyze Growth-Inducing Impacts**: (Pub. Res. Code § 21100(b)(5); 14 Cal Code Regs §15126(d)). An EIR must discuss "the ways" in which the project could directly or indirectly foster economic or population growth or the construction of new housing in the surrounding environment. (14 Cal Code Regs § 15126.2(e)). SB 79, signed into law by Governor Newsom on October 10, 2025, mandates streamlined/by right approval for housing developments of five or more units within half-mile of a major transit stop as defined in Pub. Res. Code § 21064.3, requiring minimum densities of 30 dwelling units per acre with heights up to 95 feet for Tier 1 stops and 65 feet for Tier 2 stops.[5] SB 79 effectively transforms light rail stops into triggers for by-right, high-density development, that need not be consistent with the a city's general plan or zoning, thus dramatically altering the regulatory framework as it relates to a lead agency's obligation to analyze cumulative environmental impacts of foreseeable development and growth-inducing impacts.

2.2 **Foreseeable Development**: Caselaw requires that where infrastructure serves as "a catalyst for further development," agencies must comprehensively analyze all reasonably foreseeable growth-inducing impacts (*City of Antioch v. City Council* (1986) 187 Cal. App. 3d 1325), and that projects providing capacity beyond immediate needs trigger heightened scrutiny under CEQA (*Napa Citizens for Honest Government v. Napa County Board of Supervisors* (2001) 91 Cal. App. 4th 342). The FEIR omits vital analysis of "reasonably foreseeable" and directly induced development

[5] Tier 1 stops include heavy rail stations (e.g., BART or LA Metro B/D Lines) and commuter rail stations served by at least 72 trains per day in both directions, while Tier 2 stops include light rail, bus rapid transit, and commuter rail stations with 48 to 71 trains per day. (Cal. Gov't Code, § 65912.156, subds. (n), (o))

that is virtually certain under SB 79. The FEIR's cursory treatment of growth-inducing impacts is legally insufficient under controlling precedent, including the recent Fourth District decision in *Save Our Access*. This decision is now binding authority, as the California Supreme Court recently denied review and the City of San Diego's request for depublication of the Fourth District's decision on December 30, 2025.

In *Save our Access* the Court of Appeal held that if a lead agency knows that development restrictions will be lifted and significant environmental impacts will result, CEQA requires present analysis of those reasonably foreseeable impacts, and does not permit deferral to hypothetical future project-level review. Metro's assertion that the project does not propose a major infrastructure system extension that could serve as a vector for growth (FEIR § 5.3, Responses to Public Agencies/Submission 22, Comment 22-73; DEIR § 3, 3.16-1 Growth Inducing Impacts at pg. 3.16-3) fundamentally misapprehends both the legal requirements of CEQA to analyze growth-inducing impacts, and the practical reality that the new Redondo Beach Transit Center station will directly trigger streamlined and by right approvals of high-density, high-rise development under SB 79, including on properties within Lawndale's jurisdiction and immediately across the municipal boundary in Redondo Beach.

Properties in Lawndale and Adjacent Redondo Beach Qualify for SB 79 Development, Creating Reasonably Foreseeable Growth

As recently held by the Fourth District Court of Appeal, environmental review must not only address the direct impacts of the project, but also "reasonably foreseeable" growth-inducing effects, including those resulting from changes in development restrictions and incentives (*Save Our Access*, supra, at 338). The FEIR failure to analyze the environmental impacts of SB 79-enabled development is an omission that violates CEQA's core principles.

One of the two new stations as part of the C Line extension will be located adjacent to the South Bay Galleria in the City of Redondo Beach, just west of the City of Redondo Beach Transit Center, and south of Grant Avenue. This transit center is a major multimodal hub, positioned just south of Artesia Boulevard and west of Hawthorne Boulevard, directly serving the South Bay Galleria and surrounding commercial properties.

Lawndale residential neighborhoods and commercial-zoned parcels extending along nearby west-east avenues such as W. 173rd Street and Artesia Blvd. are within a half-mile of the transit center. Within this half-mile radius, there are multiple parcels zoned R-3 (Limited Multiple Residence), and include small apartment complexes and multi-family lots on W. 173rd Street. Additionally, the South Bay Galleria and surrounding properties along Artesia Boulevards are zoned General Commercial (C-3) and are directly adjacent to both the new station and the Lawndale boundary.[6]

Once SB 79 becomes effective, the Redondo Beach Transit center will become a Tier 2 TOD Stop under SB 79. Thus, triggering by right development of 1) up to 65 ft. in height, 100 dwelling units per acre, and 3.0 FAR for parcels within in a half-mile radius of the station, and 2) up to 55 ft. in height, 80 dwelling units per acre, and 2.5 FAR for parcels half-mile radius of the station. Currently, parcels in Lawndale that are within in half-mile radius are zoned R-3 (Limited Multiple Residence) and General Commercial (GC).

Under LMC §17.48.200, R-3 currently has a maximum height limit of 35 ft.; SB 79 will increase the permissible height by more than 57%. R-3 currently permits a maximum density of 17-33 du/acre; SB 79 regulations will increase permissible density by more than 142%. While, the City of Lawndale's population does not yet exceed 35,000, it is likely that the

[6] Figure developed by GTrans in 2023 (https://ridegtrans.com/post-line-3-alert-gtrans-is-moving-to-the-new-redondo-beach-transit-center/)

population of Lawndale will continue to grow and eventually surpass the population of 35,000, thus triggering the development standards of SB 79. For the General Condition (GC) parcels, no commercial building shall exceed a height of two stories (LMC §17.56.030).

Additionally, properties on the Redondo Beach side of the municipal boundary will be subject to SB 79 and eligible for ministerial approval of 55-65 foot buildings at densities of 80-100 units per acre. The current zoning between to the Redondo Beach Transit and Lawndale includes 1) R-1 Single-Family Residential, 2) R-3 Low Density Multiple-Family Residential Zone, 3) RMD Medium Density-Family Residential Zones, and 4) C1 and C-4 Commercial Zones.

The height limit in R-1 Single-Family Residential (RBMC § 10-2.500), R-3 Low Density Multiple-Family Residential Zone (RBMC § 10-2.514), and RMD Medium Density-Family Residential Zones(RBMC § 10-2.516) is 30 feet. Now under, SB-79 the height limit will be 65 ft. in these blocks immediately adjacent to the Redondo Beach Transit Center and Lawndale municipal boundary. This represents an increase in height of more than 116%.

Under RBMC § 10-2.516, the greatest density permissible is in the RMD Medium Density-Family Residential Zones. This zone permits no more than one dwelling unit for each 1,870 square feet of lot area (23.29 du/ac). SB 79 baseline regulations would represent an increase of density of 334.78%. Thus, the growth-inducing impacts of the Project are significant and are legally required to be analyzed.

Figure 2: Existing development conditions on West 173rd Street in the City of Lawndale, characterized by low-scale residential structures subject to a 35-foot height limit. This neighborhood lies within one-half mile of the Redondo Transit Station and reflects the prevailing development pattern that would be fundamentally altered by application of SB 79, which would permit substantially taller, higher-intensity transit-oriented development. The resulting growth-inducing effects and secondary development pressures on this established residential area have not been evaluated or disclosed in the environmental analysis.

Reliance on SCAG's 2020-2045 Regional Transportation Plan Sustainable Communities Strategy (RTP/SCS) is Legally Insufficient.

The DEIR, circulated in early 2023, could not have anticipated the passage of SB 79 in October 2025, which fundamentally transforms the development landscape around transit stations. Metro relied on SCAG's 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) to forecast population and housing growth as the basis for Metro's growth-inducing impact analysis, with Metro asserting that the project is designed to serve "current and planned growth in population, housing, and employment along the corridor" as forecasted in SCAG's planning documents. Metro's response in the Final EIR that the project "is designed to serve the current and planned growth in population" fundamentally mischaracterizes the causal relationship. With SB 79's ministerial approval process, the addition of new transit stations becomes the direct catalyst for development that would not otherwise occur at these locations.

Metro's exclusive reliance on SCAG's 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy fails to account for this legislative sea change. While Metro argues that growth projections were already "anticipated" in regional planning documents, SB 79 accelerates and guarantees development that was previously subject to local control and environmental review. The statute's ministerial approval pathway means individual housing projects will bypass project-level CEQA review entirely if they meet SB 79's criteria. This precludes future opportunities to analyze or mitigate the cumulative environmental impacts of transit-induced development, placing the entire burden on this project-level EIR to comprehensively evaluate these impacts.

Courts have established that a prejudicial abuse of discretion occurs under CEQA when an agency's failure to include relevant information in an EIR "precludes informed decision making and informed public participation, thereby thwarting the statutory goals of the EIR process." (*Kings County Farm Bureau v. City of Hanford* (1990) 221 Cal. App. 3d 692, 712.) This standard recognizes that CEQA's information disclosure requirements are fundamental to its statutory scheme. When an agency omits material information necessary for the public and decision-makers to understand a project's true environmental impacts, the resulting deficiency undermines CEQA's legislative objectives of fostering informed agency decisions and meaningful public participation, regardless of whether a different outcome would have resulted had the information been disclosed. (*Fall River Wild Trout Foundation v. County of Shasta* (1999) 70 Cal. App. 4th 482, 492; *Del Mar Terrace Conservancy, Inc. v. City Council* (1992) 10 Cal. App. 4th 712, 730.)

Findings Related to Growth-Inducing Impacts Do Not Adequately Consider Foreseeable Development Projects under SB 79.

Metro's Findings related to growth-inducing impacts are not valid because they rest on the premise that any development "indirectly" stimulated by the Project would merely "redistribut[e]" SCAG-forecast growth, would not exceed regional projections, and would remain subject to future discretionary "environmental and development review" by local jurisdictions. However, these conclusions are fundamentally false now that SB 79 has fundamentally changed transit oriented land use regulations. The DEIR's growth-inducement discussion expressly concludes that the Project "does not propose a major infrastructure system extension that could serve as a vector for growth," and that "no adverse effects associated with growth-

inducement are anticipated," because the corridor is already urbanized and growth would be managed through local plans and later approvals. However, the Findings/Statement of Overriding Considerations continue to rely on the same SCAG-consistency framing in multiple contexts; repeatedly asserting that any "indirect population growth" associated with the Project would be "consistent with the SCAG adopted growth projects and accounted for within cities plans."

The new transit stations function as a legal trigger for by-right, ministerial housing approvals that substantially constrain (or eliminate) later discretionary review and project-level CEQA analysis for qualifying transit-adjacent development. Metro's Findings do not address this significant regulatory change and instead assume future local control and project-level environmental review will govern future development projects. Metro's findings fail to provide the required "substantial evidence" support for dismissing growth-inducing impacts as non-significant and not requiring additional analysis or recirculation of the DEIR

2.3 **Cumulative Impacts Analysis is Flawed**: In *Save Our Access*, the Court of Appeal invalidated an environmental review that failed to analyze the foreseeable consequences of removing height limits, holding that when an agency knows development restrictions will be lifted, it must analyze the resulting physical impacts immediately rather than deferring to future project-level review. (*Save Our Access,* supra, 115 Cal. App. 5th at pp. 414–415.) This principle is directly applicable to the C-Line Extension, where the project will trigger large-scale development under SB 79.

Metro's environmental analysis fails to account for the cumulative impacts of the C-Line Extension when considered alongside the high-density development that SB 79 will induce in the surrounding areas. As the California Supreme Court established in *Laurel Heights I*, an EIR must include an analysis of future expansion or other action if: "(1) it is a reasonably foreseeable consequence of the initial project; and (2) the future expansion or action will be significant in that it will likely change the scope or nature of the initial project or its environmental effects." (*Laurel Heights Improvement Assn. v. Regents of University of California* (1988) 47 Cal.3d 376, 396.)

With SB 79's enactment, developments up to 65 feet in height and 100 units/acre will be permitted, representing significant increases in adjacent density. Metro's failure to analyze the cumulative impacts of this

densification violates CEQA's mandate to evaluate the "whole of an action." CEQA Guidelines § 15378(a). Furthermore, under *Bakersfield Citizens*, an agency cannot simply ignore cumulative impacts by claiming future projects are speculative when the regulatory framework makes them probable. (*Bakersfield Citizens for Local Control v. City of Bakersfield* (2004) 124 Cal. App. 4th 1184, 1216 [holding that cumulative impact analysis requires consideration of "reasonably foreseeable probable future projects."])

The FEIR dismisses these potential cumulative impacts, stating that the extension will not "serve as a vector for growth." (DEIR, § 3.16, p. 3.16-3). With the passage of SB 79, this conclusion is false and does not satisfy the legal requirements of CEQA to study and analyze any foreseeable development to understand a project's cumulative impacts. Under CEQA Guidelines § 15130(b), the discussion of cumulative impacts must reflect "the severity of the impacts and their likelihood of occurrence," a requirement Metro has failed to meet by ignoring the state-mandated upzoning that accompanies this transit investment.

Under SB 79, high-density housing projects will be approved without further CEQA review if they meet the statute's criteria. This eliminates future opportunities for the public and decision-makers to evaluate or mitigate the environmental impacts of these developments, making it even more critical for the FEIR to fully account for these impacts at the present stage. "If an EIR... fails to evaluate the cumulative impacts of a project, the agency has not proceeded in a manner required by law." (*San Joaquin Raptor/Wildlife Rescue Center v. County of Stanislaus* (1994) 27 Cal. App. 4th 713, 720.)

3. **Recirculation of the FEIR is Required**: Based on the foregoing, the City of Lawndale respectfully submits that Metro cannot certify the FEIR in its current form. The enactment of SB 79 constitutes "significant new information" that fundamentally alters the Project's environmental context and growth-inducing potential, requiring recirculation under CEQA Guidelines section 15088.5(a).

3.1 **Significant New Information Requires Circulation**: Section 15088.5(a) of the CEQA Guidelines requires recirculation when significant new information is added to an EIR after public notice but before certification. Information is "significant" if the EIR is changed in a way that deprives the public of a meaningful opportunity to comment upon a substantial adverse environmental effect. As the California Supreme Court held in *Laurel Heights* II, recirculation is required when the new information discloses: "(1)

a new significant environmental impact would result from the project... or (2) a substantial increase in the severity of an environmental impact would result unless mitigation measures are adopted" (*Laurel Heights II,* supra, 6 Cal. 4th at p. 1129).

The passage of SB 79 triggers both prongs of this standard. The DEIR's original analysis of TOD development would be speculative and subject to discretionary local review. That assumption is now legally factually incorrect. SB 79 has stripped local agencies of discretionary control, granting ministerial, "by-right" approval for high-density development within one-half mile of the new stations. This creates a substantial increase in the severity of the Project's growth-inducing and cumulative impacts that was never analyzed in the DEIR. The public has been deprived of any opportunity to comment on the cumulative burden of the Metro extension combined with the now-guaranteed, unmitigated densification that will occur immediately adjacent to the new stations without further environmental review.

To certify this FEIR without analyzing the reasonably foreseeable impacts of SB 79 would result in a "materially deceptive" document that ignores the "whole of the action" (*Laurel Heights II,* supra, 6 Cal.4th at p. 1128). Because the C-Line Extension is the legal trigger for these ministerial development rights, Metro must recirculate the EIR to provide a good faith analysis of these foreseeable cumulative impacts. Failure to do so would constitute a prejudicial abuse of discretion by precluding informed decision-making and meaningful public participation regarding the true scale of the Project's environmental consequences on the Lawndale community.

3.2 **FEIR Precludes Informed Decision-Making and Public Participation**: The FEIR failure to adequately analyze growth-inducing and cumulative impacts fundamentally undermines the core purpose of CEQA to ensure that decision-makers and the public are fully informed of a project's environmental consequences before approval. (*Laurel Heights Improvement Assn. v. Regents of University of California* (1988) 47 Cal. 3d 376, 392.) By categorically dismissing the Project as not being a "vector for growth", the FEIR presents a misleadingly static view of the future, obscuring the transformative land use changes that state laws like SB 79 now mandate near transit hubs.

Based on the foregoing deficiencies, we respectfully urge the Metro Board of Directors to reject the certification of the Final EIR. The document as it stands fails to

meet CEQA's fundamental mandate to foster informed decision-making and public participation. By relying on a baseline that ignores the transformative reality of SB 79, the FEIR presents a materially misleading picture of the Project's cumulative environmental burden on the City of Lawndale in addition to the other numerous defects that have been identified.

Sincerely,

ALESHIRE & WYNDER, LLP

RE: DRAFT ENVIRONMENTAL IMPACT REPORT (DEIR) FOR THE C-LINE (GREEN) METRO EXTENSION TO TORRANCE PROJECT 61-DAY PUBLIC COMMENT REVIEW PERIOD (SCH# 2021010269)/CITY OF LAWNDALE COMMENTS

Dear Board Members:

On behalf of the City Council of the City of Lawndale ("City" or "Lawndale"), Lawndale takes this opportunity to provide its comments and express its concerns on the Draft Environmental Impact Report, State Clearinghouse No. 2021010269 (the "DEIR"), for the C-line (Green) Metro extension to Torrance (the "Project"). While the City understands that there are a number of potential benefits associated with the Project, the City remains concerned that substantial impacts to the citizens of Lawndale are not being adequately addressed in the DEIR and fall short of applicable legal standards under the California Environmental Quality Act (Public Resources Code § 21000 *et seq.*, "CEQA").

We respectfully submit these comments to the Los Angeles County Metropolitan Transportation Authority ("Metro") to help ensure that local decisionmakers fully comply with CEQA and the CEQA Guidelines (14 Cal. Code of Regulations §§ 15000 – 15387) as applicable to the Project. The City contends the Project should be rejected as proposed for a variety of reasons, including failing to conform with Metro's 2020 Long Range Transportation Plan ("LRTP"), CEQA, and the National Environmental Policy Act (42 U.S.C. §§ 4321 *et seq.*, "NEPA"). The following list outlines the City's comments and concerns:

PART I: GENERAL COMMENTS

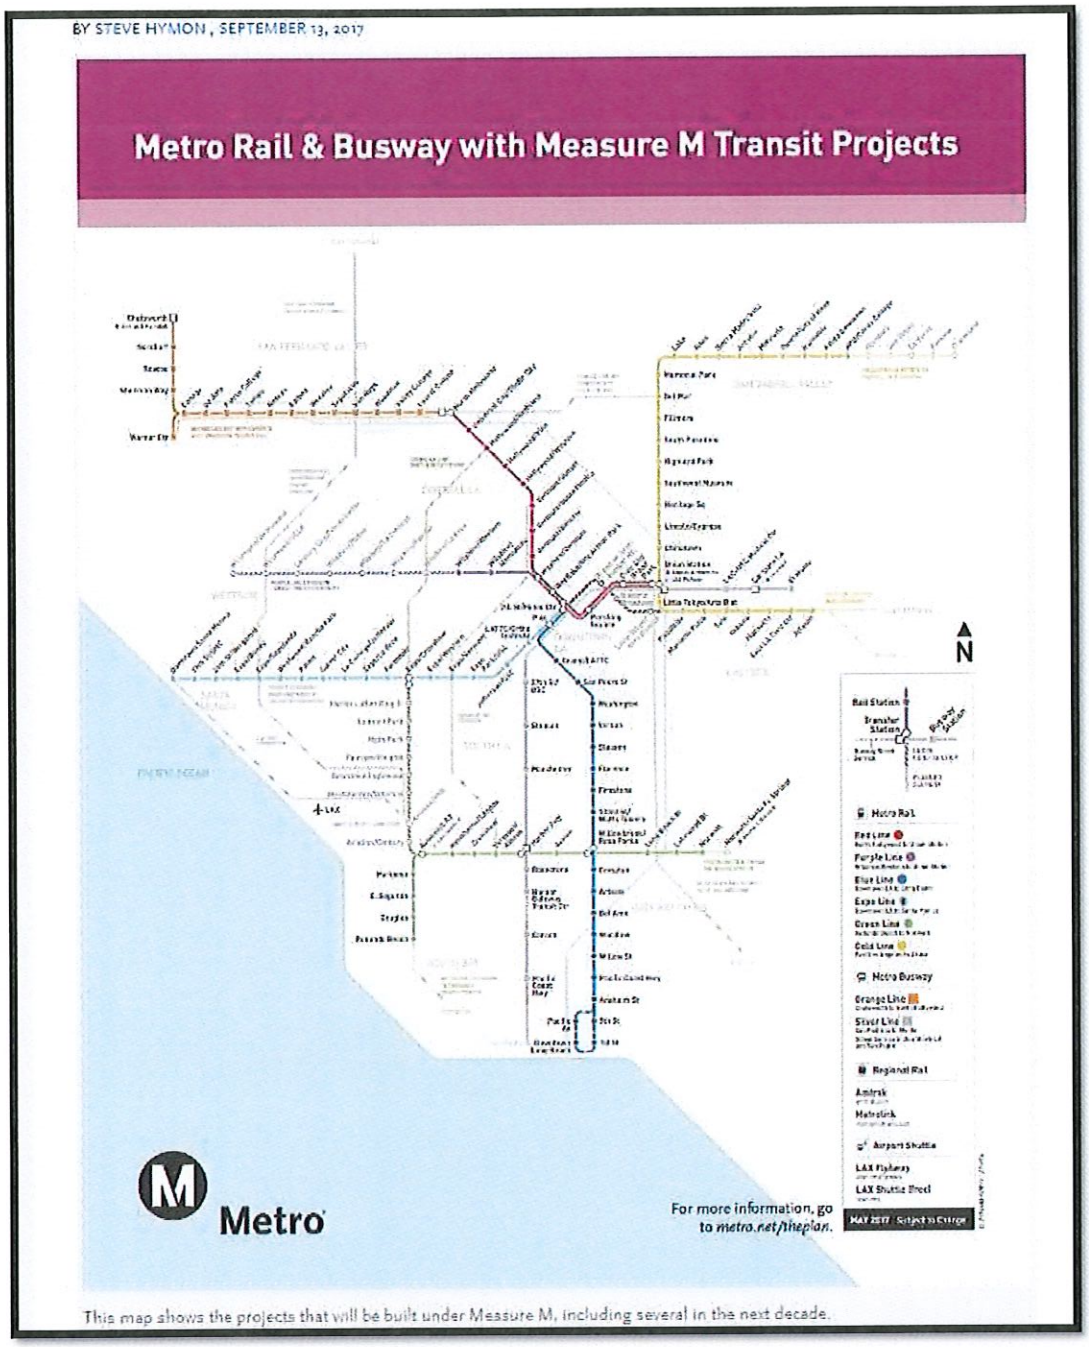
1. **Baseline Conditions:** The DEIR does not adequately address or establish baseline conditions as to environmental subjects throughout the entire DEIR. The identified areas lacking adequate baseline conditions include, without limitation: Air Quality, Greenhouse Gases, Land Use and Traffic/Transportation sections. Pursuant to CEQA, the Lead Agency is required to address and establish the baseline conditions in the DEIR. The DEIR grossly understates baseline

conditions, particularly with respect to the train crossing frequency attendant to the existing (freight) track usage versus the massive increase in rail crossing frequency attendant to the proposed Project (under any of its "options"). Currently, freight trains traverse the City of Lawndale only approximately two times daily. The proposed Project entails upwards of 12 to 18 rail crossings per hour during peak passenger periods. Thus, even though the Project's rail alignment may not significantly deviate from existing freight alignments (at least under two options), the sheer increase in the number/frequency of rail interruptions is massive. However, the DEIR's analyses fail to adequately address the impacts attributable to this change. For example, in the Land Use section, the DEIR states that the Project would "not physically divide the community" because rail crossings are "only occasional." (DEIR § 3.2-4.1.2.) This conclusory and dismissive assay overlooks the fact that a community is further divided not just by the *physical* location of the proposed rail lines, but also by the immense increase in rail *frequency* funning that will be running through the City— an escalation in train crossing frequency that increases several hundred (if not thousands) of times over the current "two trains per day" baseline. The DEIR fails to acknowledge that the Lawndale portion of the railroad right-of-way narrows. In turn, properties in this area will have significant impacts due to the increase from 2 to 200 daily trips.

As another example, the Transportation discussion baldly asserts that impacts to traffic/pedestrian safety and emergency response times will be less than significant with the (i) unfounded *expectation* that safety and traffic impacts will not vary significantly from those attendant to the current freight lines, and (ii) that traffic and emergency services can simply "detour around" rail crossings. These conclusory findings are unsupported by any analysis of much the Project will increase the frequency of rail crossings, and hence intersection closures. The delta in impacts as between the "two trains per day" baseline versus the Project's estimated "several trains per hour" is conspicuously absent from all aspects of the DEIR.

The difference between two trains per day, versus several trains per hour, presents massive interruptive impacts to the community from a land use perspective, as well as transportation circulation, noise and vibration, aesthetics, public services and other CEQA considerations. Yet, throughout the DEIR, Metro is overly-dismissive of impacts attributable to the sheer increase in rail frequency. Without further comparative analysis of actual "before and after" Project impacts, the public has not been provided an accurate representation of Project impacts upon which it can meaningfully comment. (*County of Inyo v. City of Los Angeles* (1977) 71 Cal.App.3d 185, 192–193.)

2. **Piecemealing:** The impacts of an entire project, not just individual segments, must be analyzed. CEQA forbids "piecemealing" projects. The proposed Project is part of a larger project to extend the Metro rail and transit systems, which include all the existing Metro lines and transit centers connecting with each other to form the entirety of a Metro rail system. This Project is a continuation of such existing, larger project.



Pursuant to CEQA, the whole of an entire project must be analyzed, and those environmental considerations related to project(s) broken down into little projects, thus reducing or minimizing the potential impacts to the environment through "piecemeal" is prohibited. Potential growth impacts, such as new development projects, cannot be deferred to be analyzed in a piecemeal fashion at a later time. Rather, "the need for regional environmental consideration [must be made] at the earliest stage of a planned development before it gains irreversible momentum." (*Bozung v. Local Agency Formation Commission of Ventura County* (1975) 13 Cal.3d 263, 284, fn. 28.) An agency cannot treat one

integrated, large project as a succession of smaller projects to avoid analyzing the environmental impacts of the whole project. (*See, CASDBA v. County of Inyo* (1985) 172 Cal. App. 3d 151, 165-166 [two separate "packages" of entitlements for one Project, each analyzed in a separate Negative Declaration, improper].) Piecemealing impermissibly results in a curtailed project description, which allows the EIR to misstate the cumulative impacts "by separately focusing on isolated parts of the whole." (*San Joaquin Raptor/Wildlife Rescue Center v. Cnty. of Stanislaus* (1994) 27 Cal. App. 4th 713, 729-30.)

It is "only through an accurate view of the project" that the "public and interested parties [can] balance the proposed project's benefits against its environmental costs, consider appropriate mitigation measures, assess the advantages of terminating the proposal and properly weigh other alternatives." (*San Joaquin Raptor Center v. County of Merced* (2007) 149 Cal. App. 4th 645, 655.) In this case, it is clear that the Project will have overlapping environmental impacts in conjunction with other Metro transit projects to be directly connected, since (i) they are located, or will be located, adjacent or directly connected to one another, (ii) they will be providing similar or the same services to the community (i.e., public rail transit), (iii) they will both be used and visited by residents and visitors to the Los Angeles County Region as one integrated project, and (iv) they are both owned and operated by the same entity.

Thus, this Project must be evaluated on a programmatic level well beyond the mere terminus of its tracks. Indeed, this issue also represents a principal deficiency in the DEIR's analyses of cumulative impacts, which analyses fail to address related and upcoming rail projects throughout the DEIR. Simply put, the DEIR addresses the project in an "environmental vacuum."

3. **NEPA:** The City is informed and believes the Project is substantially financed with Federally-based funding sources. This is evidenced, without limitation, by Metro's Planning & Programming Committee meeting staff report dated November 18, 2009, in which the Committee deliberated the Harbor Subdivision Transit corridor now owned by Metro and identified as the ROW proposed Project area. In the fiscal impact portion of that report it is clearly stated: "Funding of $800,000 from a combination of federal funds provided by the Southern California Association of Governments (SCAG) and Proposition C 25% of funds for this project is included in the FY10 budget in cost cebte4r 4330 South Bay Area Team, in Project 400229 (Harbor Subdivision Task 01.02, 50316 (Services Professional/ Technical) for the completion of AA Study."
The DEIR makes several references to the 2009 Alternative Analysis Report. That 2009 AA report, in turn, says that Federal funding sources are going towards the Project.

The tables below were obtained from a Construction/Executive Committee Board Report that further breakdown Green Line Extension to Torrance funding.

Estimated Accelerated Capital Cost and Available Funding
"Pillar Projects"
($ in millions)

Pillar Projects	Total Capital Cost	Metro Local Funding	State and Federal Funding	Funding Surplus/ (Shortfall)
Gold Line Eastside Extension Phase 2	$ 3,037.7	$ 2,179.8	$ 385.7	$ (1,072.2)
Green Line Extension to Torrance	1,086.0	854.7	231.3	-
Sepulveda Transit Corridor	8,572.6	3,448.6	3,748.1	(1,376.0)
West Santa Ana Branch to Downtown LA	5,565.6	2,513.4	2,155.5	(896.7)
Total	$18,662.0	$ 8,996.5	$ 6,520.7	$ (3,344.8)

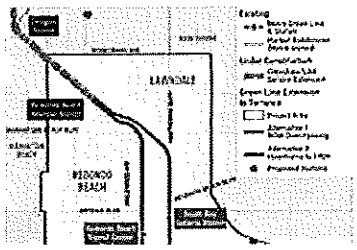
Total Project Cost:	Life of Project budget still to be established. Measure M estimate is $891 million (2015$).
Description:	This extension will provide congestion relief along the I-105 corridor. It will also improve mobility in southeastern LA County by accessing the regional rail network through connections to the Metro Blue, Expo, and Crenshaw lines.
Funding Status:	Per Measure M, the Project has a $619 million (2015$) allocation, plus inflation adjustments, beginning in FY2026 for construction, and Measure R allocation of $272 million beginning FY2028. Received award of $231.3 million TIRCP grant and $19.7 million of $31 LPP in Feb. 2018.
Subregion:	South Bay
Metro Project Number:	#460104



Moreover, related transit projects directly connected to this Project's rail extension have done Joint EIR/EIS reports to comply with both CEQA and NEPA, respectively. As noted in Lawndale's comments on unlawful "piecemealing," Metro cannot segment this Project from directly connected and related projects as a means of understating, and avoiding analyses of, the larger project as a whole. Likewise, Metro cannot segment a larger project "as a whole" into discreet "smaller projects" to avoid NEPA compliance in some areas, even though NEPA would otherwise apply to the larger project. Yet, apparently, that is what has occurred here.

Furthermore, the likely reliance on federal funding is shown through Metro's own financial documents. First, the October,7, 2010 EIR/EIS Scoping Report identified extensive federal involvement with the Project, and there is nothing the City found in the administrative record thus far that explains why the EIS component was dropped. We do note that Appendix D-5 of the DEIR/EIS Scoping Summary lists The Federal Aviation Administration, US Army Corps of Engineers, US Department of Housing and Urban Development and US

Environmental Protection Agency as Cooperating and Participating Agencies. Nor are any federal agencies listed as "responsible agencies" under CEQA, and federal agencies which have discretionary approval for portions of the Project are not listed in Table 2.6-1 of the DEIR as required.

Second, Metro's January, 2023 Cost Summary Report estimates Preferred Project costs at $1.96 billion with secured funding sources coming from Measure R, Measure M, California State Transportation Agency TIRCP, a 3% match by local agencies, and unspecified "unsecured funding sources." Metro's Expenditure Plan for Measure R (as amended July 22, 2021) identifies Total Cost Estimate for the Project to be $280 million, with $272 million coming from Measure R funds, $8 million from local funding, and a "to be determined" amount from Federal and State Funding, with project completion in FY 2033-2035. As to Measure M funds, Metro's 2015 Expenditure Plan identifies a total cost estimate of $891 million, with $619 million coming from Measure M funds and $272 million coming from all other funding sources. The 2020 TIRCP Allocation Plan Update allocates $231.3 million to the Project through 2024-25. The City recognizes that these costs and funding amounts are estimates and moving targets, and thus mixing "apples and oranges"; however, the theme that arises is that the secured funding for the Project comes nowhere near the projected $1.96 billion total estimated cost.

This is a significant point because (1) reliance on unsecured and "to be determined" funding sources is contrary to the DEIR's Section 2.2's Project Objective to "provide a cost-effective project," and (2) violates NEPA for lack of an EIS to support federal agency funding and/or approvals.

The DEIR states in conclusion that a "funding plan and schedule will be prepared after Metro selects a preferred alignment." Isn't that backwards? Shouldn't Metro have the money to buy something before it commits to buying it? The City understands that the Green Line Extension to Torrance project is still under development, but how can Metro have a "cost-effective" project when it doesn't know how much money it will have to spend, and the sources of secured funding to date is woefully short?

The proposed Project and options must be analyzed in an EIR/EIS joint document or otherwise processed in compliance with both CEQA and NEPA.

4. **Analyses Based on Unknown Future Standards or Approvals:** The DEIR improperly defers its analyses to reports and standards that either do not exist and/or are unknown. For example, without limitation, in the Transportation section Project impacts are found to be less than significant because, in part, Project construction will be subject to a construction traffic management plan ("CTMP"). (*See, e.g.,* DEIR § 3.2-4.1.1.) As the DEIR openly admits, no such plan has been developed or circulated, much less adopted. Similar to issues of "deferred mitigation," the public cannot meaningfully comment on plans, regulations or approvals relating to environmental impacts *to the extent they are non-existent*

and/or unknown. Other instances of the DEIR deferring environmental analysis to unknown, unsettled or non-existent policies and standards are presented in Part II below, without limitation; Lawndale otherwise objects generally to all instances in which the DEIR relies upon unknown, unsettled or non-existent policies, plans, changeable design standards and/or approvals.

5. **Insufficient Mitigation Measures:** The DEIR prepared for the Project identified several areas of significant environmental impacts including: Aesthesis; Greenhouse Gases; Land Use Planning; Transportation/Traffic; Hazards & Hazardous Materials; Air Quality; and Noise & Vibration sections. However, despite these acknowledgements of significant environmental impacts, the DEIR lacked, deferred, and obfuscated proposing adequate mitigation measures to address the issues outlined in the Initial Study. To the extent the DEIR does present mitigation measures, Lawndale objects to all measures to the extent they are reliant upon deferred studies, analyses or policies that are not grounded in currently-known, objective standards.[1]

PART II: SECTION-SPECIFIC COMMENTS

1. **Section 2, Project Description:** The Project Description is deficient because the public was not provided with "an accurate, stable and finite" project description on which to comment. (*County of Inyo v. City of Los Angeles* (1977) 71 Cal.App.3d 185, 192–193.) Here, the DEIR "proposed Project" is framed as not just one, but three "options" that vary significantly. Indeed, the Hawthorne "option" presents an entirely different alignment when compared to the other two "options" (and even those other two "options" present widely varying environmental impacts). "[A] project description that gives conflicting signals to decision makers and the public about the nature and scope of the project is fundamentally inadequate and misleading.) (*Washoe Meadows Community v. Department of Parks & Recreation* (2017) 17 Cal.App.5th 277, 287 (*Washoe*").) The DEIR's presentation of three very different "options" all presented as one "Project Description" fails to designate a stable project and thus presents an obstacle to informed public participation.

   Lawndale further offers the following comments relating to the Project Description:

   a. Section 2.1-1, Project Location and Surrounding Uses: The DEIR Project Description is also not clear and fails to identify a specific Project because it mentions a high-capacity transit center, but does not define what that is and what constitutes "high capacity."

[1] The DEIR also presents mitigation measures that are either confusing in their application, or are missing entirely where there otherwise should be mitigation proposed. For example, Mitigation Measure LU-1 – Temporary Crossings is proposed in the Land Use analysis. However, the Land Use section finds all environmental impacts to be "less than significant". Why is a mitigation measure being proposed if Metro earnestly believes that Land Use impacts are less than significant? Lawndale posits that the imposition of a mitigation measure here belies how understated Metro's findings of less-than significance are.

b. Figure 2.1-2, Project History: The Project site map is incomplete and does not identify the Project area clearly.

c. Section 2.2, Project Objectives: The following Project objectives in the DEIR are misleading and cannot be achieved because descriptions relating to the objectives are too vague and a genuine plan to achieve such objectives would require mitigation measures: (1) "Reduce air pollution and greenhouse gas emissions by making transit a more viable transportation choice;" (2) "Avoid and minimize environmental impacts on environmental resources to the maximum extent feasible;" and (3) "Provide a cost effective Project."

d. Section 2.3-1, Proposed Project: The DEIR is not clear on property acquisition. Metro stated that they would not acquire any property on the right-of-way, or "ROW". However the DEIR states that Metro "would acquire or lease additional ROW from BNSF to accommodate the two new rail tracks. This is in case of the ROW not being big enough to accommodate the tracks." The DEIR does not specify what the right-of-way will be.

e. Figure 2.3-2, Proposed Project: This figure is showing a proposed right-of-way of 101'-105', which is more than the existing right-of-way owned by Metro (currently 100 ft.). Metro stated that no properties would be taken, but based on this elevation that cannot be correct. A side elevation should also be provided to include the surrounding residential areas to compare the scale of the Project versus the existing site. The footnote in this discussion alludes to a retained fill ("The retained fill would be an elevated platform made of reinforced walls which are filled with soil material"). But, an indication of what that is on the elevation is lacking.

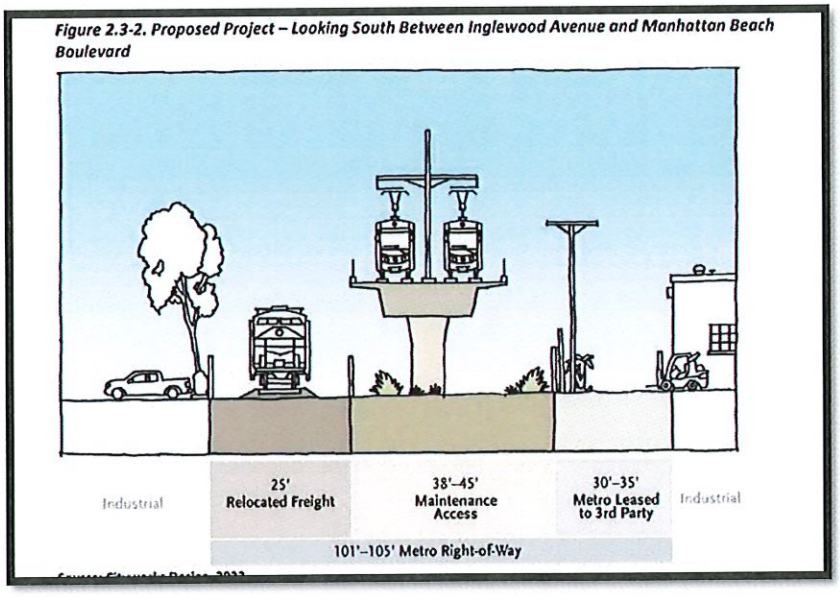


Figure 2.3-2. Proposed Project – Looking South Between Inglewood Avenue and Manhattan Beach Boulevard

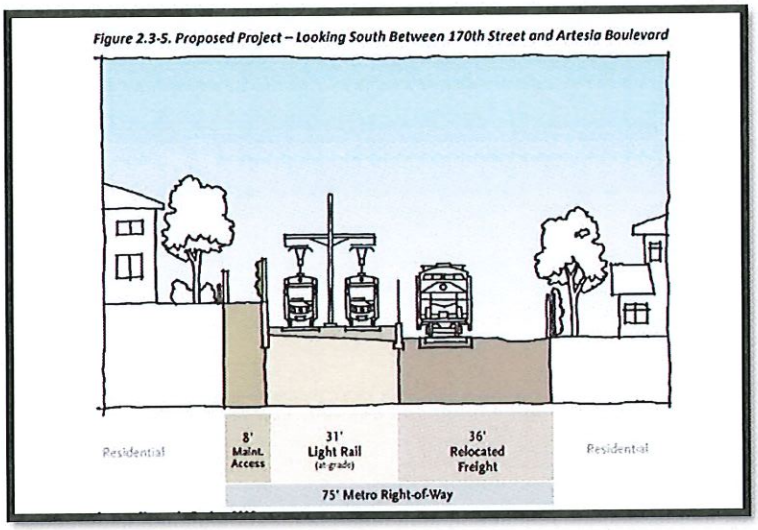
f. Figure 2.3-2; Looking South of 162nd: There is no clear explanation of the type of construction the overhead railway would be, some areas say columns and the diagram states "elevated/at-grade." This is too ambiguous.

g. Figure 2.3-5, Proposed Project elevation looking south between 170th and Artesia Blvd.: The elevations depicted are vague and lack clarity. The diagram indicates a small proximity from the light rail to the freight rail. However, it is required that there is a minimum of 20 ft. between the light rail and the freight train. Such distance is not indicated in the elevation, and the distances indicated do not appear to comport with minimum space between rails.



h. Lacking Bridge Expansion Description: The description in the DEIR states that the rail tracks would cross over Artesia Boulevard, however the existing bridge cannot accommodate three rail tracks. The proposed Project would need to include the expansion of the bridge. This is not analyzed under the DEIR or shown in the exhibits.

i. Multi-Use Recreational Paths: The DEIR does not address the relocation of the railways, which will have significant impacts to surrounding thoroughfares. The size of the proposed walking path must already be determined—giving an approximate number is not sufficient. The figure attendant to this discussion does not identify a fence or wall. Thus, what is proposed is not clear.

j. Other Insufficient Elements of the Project Description. In all, the Project is overbroad, vague, and reliant upon unspecified assumptions. Further areas of ambiguity include, without limitation:

   i. *2.3-4.2, Light Rail Vehicles*: The DEIR states that "[I]t is assumed that existing Metro light rail cars would be used" and provides a

sweeping generalization of how such cars are "typically" configured. The height and surface materials (as relevant to aesthetics), and attendant air and exhaust systems (as relevant to air quality) are not described. Further, Metro's reliance upon an "assumed" use of "typical" light rail cars is too indefinite for purposes of eliciting meaningful public comment.

ii. *2.3-4.4; Ancillary and Support Facilities*: The Project Description loosely states, "Multiple additional elements are required to support light rail vehicle operations, including an overhead catenary system (OCS), traction power substations (TPSS), and communications and signaling buildings." The size, locations, number—and indeed what other "additional elements" may be intended here—is left entirely to the public's imagination.

iii. *2.3-4.1, OCS*: This is likewise too vague. For example, the description states that these overhead wires will entail poles "[i]n some locations" to "be located on both sides of the tracks." The number and locations of single versus dual OCS infrastructure is unspecified.

iv. *2.3-4.2, Traction Power Stations*: These stations are described as being subject to "principles of urban design" with "several options available for some locations." The lack of specificity here fails to comply with CEQA standards.

2. Aesthetics:

a. Failure to Address Visual Character/Quality Impacts in Conflict with General Plan Scenic Quality: In general, the Aesthetics section of the DEIR does not adequately identify, study, or mitigate potential aesthetic impacts on the surrounding area with regards to the proposed Metro Project. This is not surprising given the lack of detail that was provided in the description of the individual Project elements. The DEIR inadequately describes, insufficiently analyzes, and certainly fails to propose any mitigation measures to minimize disruption to, visual resources even where Lawndale's General Plan Open Space Element applies for purposes of preserving aesthetic quality and character. For example:

- *Section 3.3-1.3, Local Regulations*: The DEIR failed to demonstrate how the Project meets Lawndale's policies and regulations. The "Resource Study Areas," as depicted in the DEIR, do not identify and evaluate existing conditions of open space used by residents. The DEIR has failed to provide sufficient key points of interest along the existing ROW used for recreational purposes. For example, the proposed walking path will disturb, disrupt and interfere with day-to-day recreational features currently utilized by Lawndale residents.

Lawndale's General Plan and policies strive to protect the limited recreational spaces within the City of Lawndale as vital elements of residents' quality of life.

- *Page 3.3-22, Inglewood Avenue to Artesia Boulevard (Proposed Project and Trench Option)*: With respect to an identified greenway, the DEIR states: "because the greenway is not specifically protected by any applicable local general plans, planning and zoning codes, or other regulations, this greenway is not considered to be a visual resource." This statement and any analysis stemming therefrom is inaccurate because it does not acknowledge the application of Lawndale's General Plan Open Space Element.

- *Unaddressed Open Space Areas*: The proposed elevated rail structure and the freight track will have potential significant impacts along the existing railway as it is currently identified in the Open Space Element of Lawndale's General Plan as open recreational space. There is currently only one railway, no overhead wires and ample vegetation that residents use for recreation. Adding the light rail system, along with its ancillary structures and the overhead wires, will significantly impact the aesthetics of 11.04 acres of recreational land within Lawndale.

Therefore, to the extent Metro holds that "visual impacts in urbanized areas are assessed based on the potential of a project to conflict with applicable zoning and other regulations governing scenic quality" (DEIR p. 3.3-59), the DEIR fails its own stated standard. As demonstrated in the above examples, visual impacts to Lawndale recreational areas are in conflict with the City's General Plan Open Space Element, leaving the DEIR's analysis thereof legally insufficient.

The Aesthetics section states that there will be no significant impacts. However, based on the actual current conditions of the Project area and the proposed Project's new above-ground wires and pillars to be added, there will be substantial impacts to aesthetics with respect to all Project options.[2]

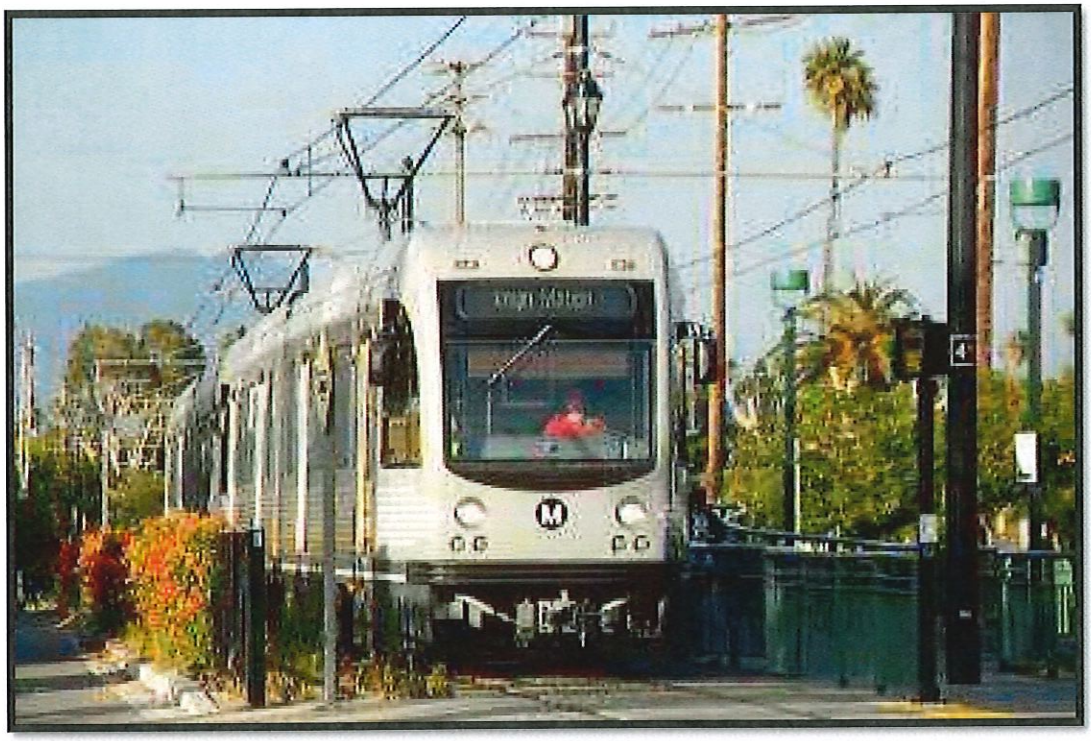
b. <u>The DEIR Fails to Address Other Fundamental Aesthetic Elements, Wants for Baseline Descriptions of Aesthetic Conditions, and Presents Inadequate Methodologies</u>.

i. *Unstated and Understated Visual Impacts*:

[2] The DEIR similarly misjudges aesthetic character and scenic quality policies elsewhere. For example, without limitation, Figure 3.3-17 (View 12) and Figure 3.3-38 (View 48) respectively depict an open area with ample mature trees and a tree-lined residential street with homes dating more than 75 years old. Nonetheless, the DEIR misconstrues these areas, amongst others, as "urbanized areas" having no "unique visual features" and thus improperly understates (or discounts) visual impacts. The same can be said of the DEIR's aesthetic lacking analysis of El Nido Park in the City of Redondo Beach.

The picture below shows the existing Metro ROW of way. Looking northeast from Condon Avenue in Lawndale.

The picture below is an example of an existing Metro railway going through a residential area and how it will potentially look going through the ROW. Clearly, the potential aesthetic impact is significant compared to the above.



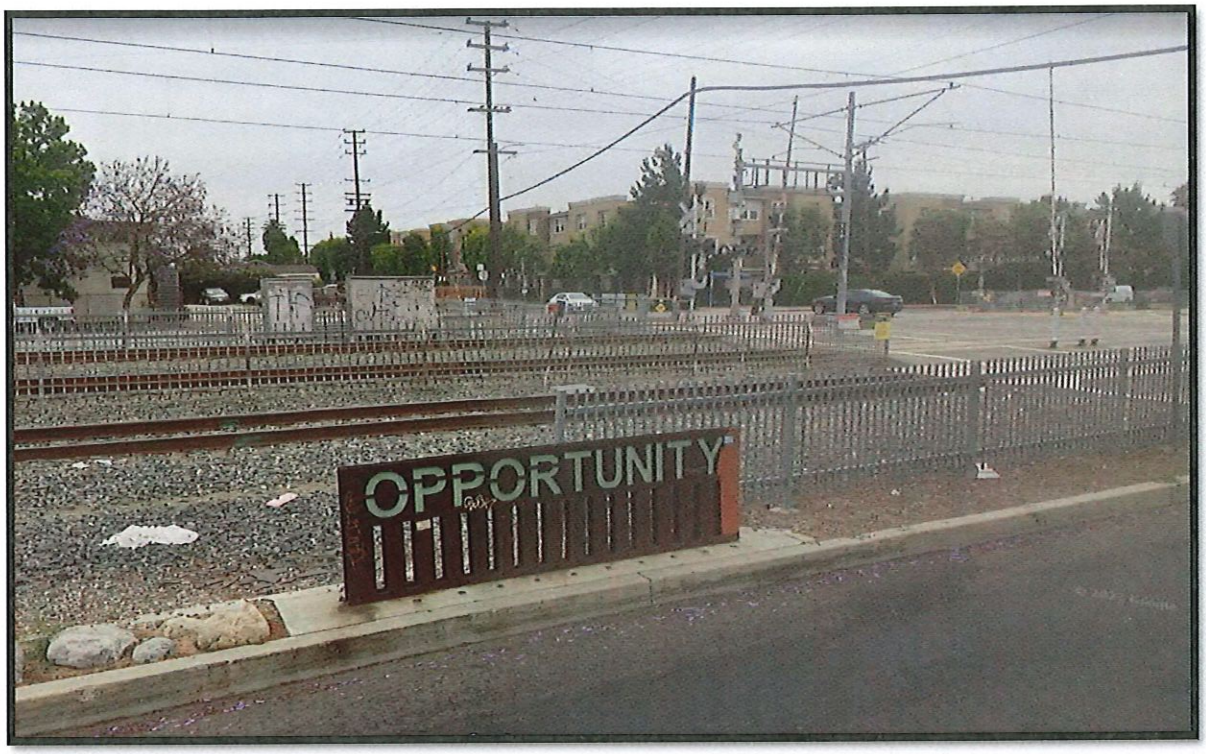
The picture below shows existing Hawthorne Boulevard looking North towards the 405 freeway. According to the DEIR this would be the location of one of the Project "options" where the Project may be located.

The DEIR fails to evaluate the negative impacts on aesthetics within Hawthorne Boulevard. Below is a picture of the existing C-line Redondo Metro station. It is evident that the construction of an overhead railway like this would significantly change the aesthetic of Hawthorne Boulevard as pictured above.

The DEIR fails to provide a maintaince schedule to prevent blight. The two pictures below existing Metro Light railway areas in Compton, located near residential areas. The railway has not been maintained, there is rubbish, dead vegetation, graffiti, and homelessness.

The photograph below shows the "art" that was provided by Metro when the light rail train passed through Compton. Lawndale posits that such installations detract from, rather than enhance, aesthetic appeal. Such installations are also a draw for

graffiti, vandalization and other nuisance conditions. Yet, these issues are not addressed in the DEIR Aesthetics discussion.



Below is an example of a current Metro light rail area showing a typical itinerant encampment. As descrbed further below, railway setbacks, bridge undercrossings and ROWs are a draw to those experiencing homelessness, resulting in unsightly and unsafe conditions. Yet, these aesthetic issues are not addressed.

The DEIR fails to provide mitigation measures for aesthetics on all three Project options. The DEIR must provide a detailed design for the proposed Project, fuller description of potential aesthetic impacts and meaningful mitigation measures to minimize aesthetic impacts.

ii. *Soundwall Missing Design/Aesthetic Analyses*: The DEIR fails to address the aesthetic impacts of specific Project elements. For example, the DEIR mentions a soundwall in both the Aesthetics section and as a Noise mitigation measure (MM-NOI-2); however, no design/aesthetic description is proposed or provided in attendance with respect to the proposed soundwall, which should be part of the Aesthetics section. The description of the soundwall is extremely vague and does not give enough information to review and comment on whether it will mitigate impacts. Further detail and schematics must be provided.

iii. *Metro Design Standards*: The DEIR fails to provide information on Metro's adopted design standards. The proposed Project fails to show any information related to such.

iv. *Metro Tree Policy*: The DEIR fails to provide a copy of Metro's Tree Policy. The DEIR should provide the proposed landscaping and monitoring plan for the future Project and analyze appropriate natural buffers to all adjacent residential areas.

The two pictures below show the existing Metro light rail roadway network in the City of Compton. The areas are barren and without landscaping, which is a

significant change from the existing ROW in the City of Lawndale. The dominance of rock, metal and hardscape features present potential significant impacts to light and glare, which were not analyzed in the DEIR.

v. *Section 3.3-2, Methodology*: The DEIR indicates that "typical views and key observation points ("KOPs") for the visual assessment are identified, based on the responses of representative viewers." The

DEIR fails to identify the "representative viewers" and the role they play in the Project.

- It is unclear if the views represent the greatest impact to the greatest number of representative viewers.
- It is unclear if the views represent the cross section of viewers exposed to the site.
- It is unclear if there are any views that should be simulated to show there would be minimal impacts.

Based on the KOPs identified in the DEIR only two KOPs were identified within the Open Space area in Lawndale, which insufficiently describes residential neighborhoods located along the ROW. The responses from the "representative viewers" fail to provide the existing recreational space used by residents. In addition, the representative viewers failed to include additional KOPs along nearby residential areas.

vi. *Section 3.3-2.1, Resource Study Area*: The DEIR presents resource study areas ("RSAs") that omit areas "blocked by tall vegetation, buildings, and other intervening development." This metric for drawing RSAs is entirely subjective and could be applied to exclude a vast majority of areas that may include local residents in Lawndale. Metro needs to provide a methodology that is objective, fair and does not exclude residents based on subjective interpretations of "tall vegetation, buildings and other intervening development."

vii. *Section 3.3-2.2.2, Visual Quality*: The DEIR contains subjective interpretations and decisions that are not appropriate and will significantly impact the community of Lawndale. The DEIR indicates that "visual quality refers to the aesthetics of the landscape, which is based on the viewers values and notions about what constitutes a quality setting."

viii. *Section 3.3-3.3, Visual Character*: This section of the DEIR fails to adequately identify the existing character of the residential neighborhood(s). There is a total of 15 residential streets along the proposed Project. Five out of those 15 residential streets have vital cross points used for day-to-day activities. Those five streets are used to travel to two separate schools located one block east from the proposed Project site. The DEIR neglects to set the proper baseline in describing the character of the residential area. For example, the DEIR states that the existing "residences were constructed between the 1930s and the 1970s" and the DEIR fails to mention that newer single-family dwellings were developed in the

1990's. The DEIR improperly understates the residential view character of these suburban areas adjacent to the proposed Project will be negatively impacted.

ix. *Figure 3.3-3, Detailed Location of Representative Views*: The DEIR fails to identify locations that will be affected by the proposed light-rail Project. All railroad crossings located within the residential areas should be identified as KOPs.

x. *Page 3.3-22, Inglewood Avenue to Artesia Boulevard (Proposed Project and Trench Option)*: The DEIR fails to identify residential properties located between 170th Street and Artesia Boulevard.

xi. *Page 3.3-31, 182nd Street to Intersection of Hawthorne Boulevard and 190th Street (Proposed Project and Trench Option)*: The DEIR provides inconsistent descriptions of ROW green / open space located in the City of Lawndale versus that located in the City of Torrance without any stated justification or reasoning.

c. Inadequate Light/Glare Analysis: The DEIR fails to passably analyze aesthetic issues of light and glare, particularly from an operational impact perspective. (*See*, Sections 3.3-4.4.2 – 3.3.-6.3.) At Section 3.3-4.4.2, the DEIR states:

The Proposed Project includes several elements, such as glass, metal surfaces, and additional lighting that could create new sources of glare. However, the existing sources of light at the existing Redondo Beach (Marine) Station do not generate substantial glare. Thus, it is not anticipated that the Proposed Project would generate substantial glare.

This conclusory and over-generalized comparison between the glare impacts attributable to a stationary building and a fast-moving, metallic vehicle is entirely misplaced. The fast transitory nature of rail cars produces substantially different attributes of "flashing" light and glare, particularly if paired with unmitigated surrounding hardscape (an unknown given the lack of landscape screening information provided). Yet, no further analysis other than the above-quote is provided with respect to the Project's potential reflective attributes.

Similarly, the DEIR fails to address the introduction of lighting from rail vehicle headlights, which will impact certain residences, as well as street vehicles and surrounding businesses. As to maintenance lighting, the DEIR provides no meaningful analysis based on the conclusory expectation that non-transient lighting will "be compliant" with Metro and other agency lighting regulations and design standards; these standards are not described or analyzed. (*See,* Section 3.3-7.1.)

While the DEIR observes that shade and shadow patterns from Project-related structures "would change throughout the day and seasonally," and notes that such changes could create "adverse shadow impact" to recreational facilities, there is no mention of impacts to surrounding street, pedestrian, residential or other viewsheds. (Section 3.3-7.1.) Nor does the DEIR identify or analyze structures that may pose undeviating areas of shadow over adjacent streets, thoroughfares, or buildings (including residences).

Because the DEIR fails to properly study these significant impacts on aesthetics, the DEIR fails to live up to its role as an informational document. Metro's failure here "precludes informed decision making and informed public participation, thereby thwarting the statutory goals of the EIR process." (*Ass'n of Irritated Residents v. County of Madera* (2003) 107 Cal.App.4th 1383, 1391.)

d. Section 3.3-1.2, State and Regional Regulations: State and Regional Regulations CEQA. DEIR statements here delete a very critical component of the California Public Resources Code Section 21002(b), which states: "Take all action necessary to provide the people of this state with clean air and water, enjoyment of aesthetic, natural, scenic, and historic environmental qualities, and freedom from excessive noise." The DEIR neglects the element of freedom from excessive noise. The proposed trips that will be generated for the light rail will dramatically increase the amount of daily noise (20 hours a day) for the residents.

3. **Air Quality:** The Air Quality section of the DEIR is incomplete and, therefore, inadequate. This proposed Project will create a significant amount of air quality issues locally and regionally. The Air Quality sections of the DEIR did not adequately address or identify vehicle traffic trips generated by the Project. Additionally, vehicle emissions that will be generated have not been adequately addressed by the DEIR. For example, the DEIR does not adequately account for air quality impacts associated with rail riders driving automobiles either to a rail station (e.g., "park and ride"), or from a rail station to their endpoint destination.

a. Section 3.4-1.1, Federal Regulations: This section mentions Toxic Air Contaminants ("TAC") as air pollutants that may increase a person's risk of developing cancer and/or other serious health effects. The Project includes the relocation of the existing freight locomotive, and the DEIR here mentions that at least 10% of the soil will be contaminated. All three Project options are located within or closer than 500 feet of sensitive receptors that may be affected by the TACs resulting from the Project. There is no mention of a Phase II or Phase III study to check for contamination on the property along the ROW option. The DEIR mentions that Metro will be removing the

contaminated soil; however, there are no details or information about how this would impact the sensitive receptors.

b. Section 3.4-2.2.1, Proposed Project construction: The DEIR fails to give detailed information on the amount of soils and materials to be disturbed. The Project would involve a total of approximately 556,100 cubic yards of imported and exported materials. What are the individual quantities of dirt that will be moved or imported? How will dust built-up be mitigated? Such information is conspicuously lacking.

    i. The trench option fails to provide details on the amount, type, and timing of material to be exported and imported to the Project site.

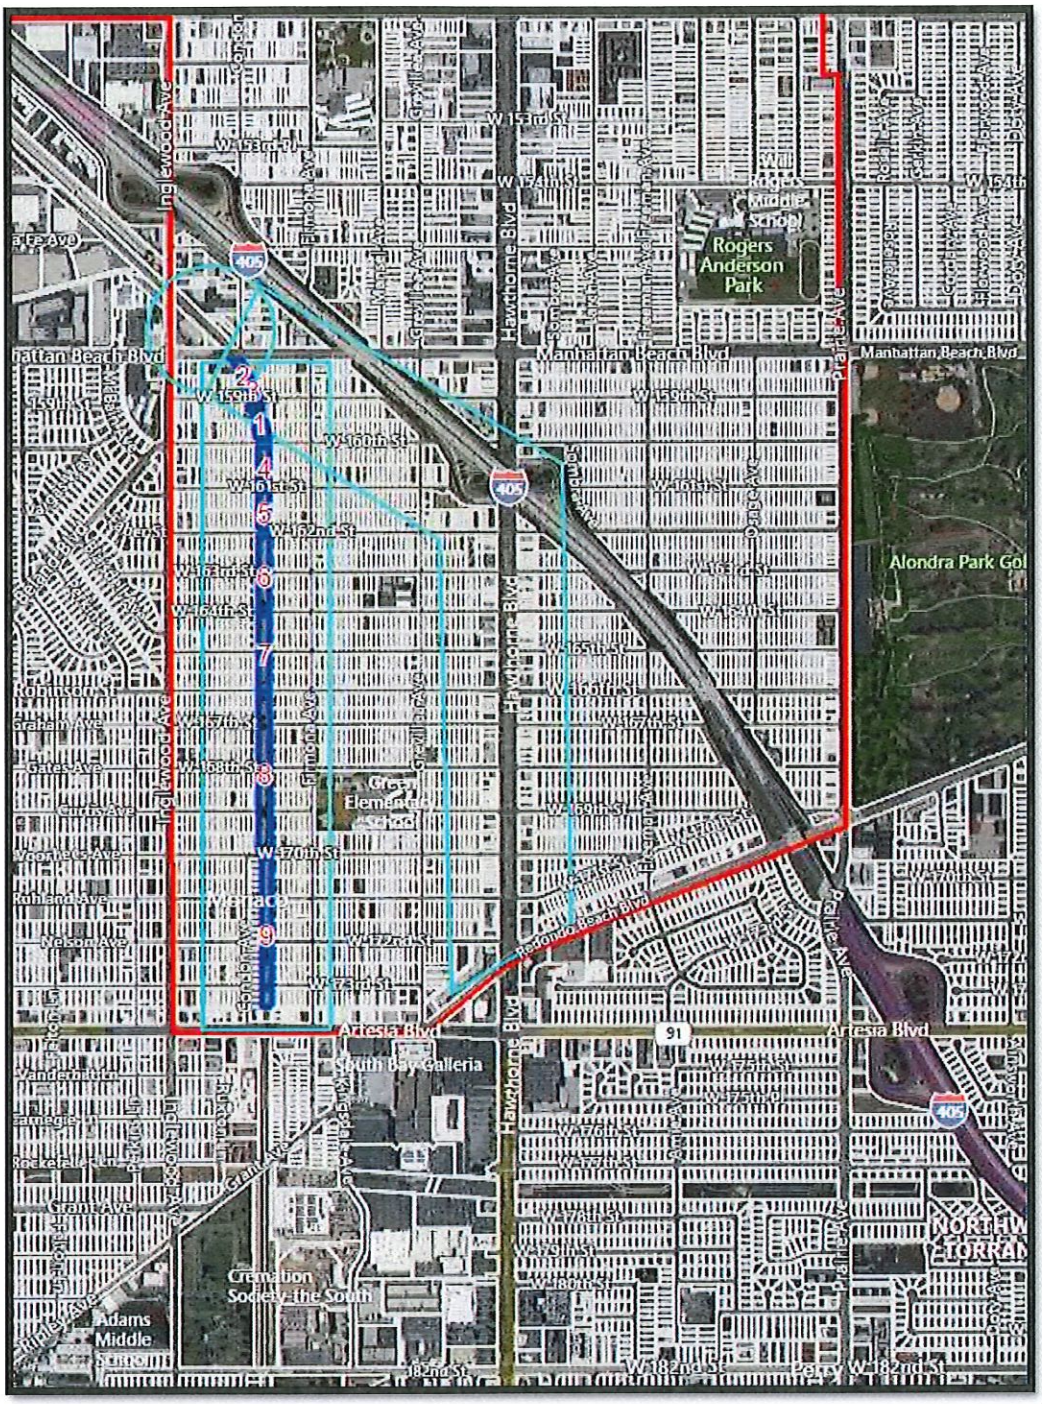
    ii. The Hawthorne option fails to provide details on the amount, type, and timing of material to be exported and imported to the Project site.

c. Section 3.4-2.3.1, CEQA Review of Sustainable Transportation Projects: The DEIR states, "To estimate daily emissions for the Proposed Project, Trench Option, and Hawthorne Option, the daily vehicle miles travelled ("VMT") reduction corresponding to each operational scenario was multiplied by the corresponding emission factor for each pollutant" This statement does not present the results of calculations or numbers supporting it.[3]

d. Section 3.4-2.4.1, State CEQA Guidelines: This section of the DEIR provides false information. The proposed Project and its options would conflict with the applicable SCAQMD plan due to the direct impact on population and housing as per SB 2097. The Project would expose all sensitive receptors within a 500-foot radius of the Project. There is a high number of residential homes and several schools near the proposed Project location and the options. The proposed Project of the ROW includes the relocation of an existing freight train, and according to the Air Quality portion of the DEIR, the moving of dirt anticipates at least 10% of contaminated soils which need to be disposed of, however this is located within 100 feet of sensitive receptors. The DEIR states "Compliance with the Metro Green Construction Policy will preclude the possibility of unhealthy exposures of sensitive receptors to TAC concentrations during the proposed Project construction." This statement is incomplete, there is a lack of explanation of how this will be achieved.

The diagram below shows sensitive receptors within 500 ft. of the proposed Project and proposed options.

[3] Throughout the DEIR it is also stated that the proposed Project and options would reduce Vehicle Miles Traveled ("VMT"); however it does not present an analysis of, or number by which, this will be reduced. This conclusory statement is inadequate.



The DEIR fails to provide accurate and complete mitigation. This section also contains deferred mitigation: "If maximum daily emissions would exceed applicable thresholds values during construction or operations, opportunities to mitigate and reduce those emissions are required to be explored and implemented as feasible."

e. Section 3.4-2.5, Project Features: The DEIR fails to provide complete information and details about the use of generators. More information must be provided on locations, types of generators and whether they will be back-up or will they be on all the time. The DEIR states inspections will be conducted by Metro for compliance with air quality regulations. The study fails to specify how often or whether this information will be submitted to AQMD. If Metro fails to comply with the inspections or with air quality rules, how will this be mitigated? Merely deferring air quality analysis to future inspections is unacceptable.

The DEIR provides incomplete and inaccurate information. The document states that the information provided for 2020 data is not reliable due to the COVID19 Pandemic; however, the 2020 monitoring period for air quality is used for concentrations of pollutants. During the pandemic there was nearly no traffic and low transit ridership. The information is inconsistent; all data presented must be consistent.

The DEIR did not address new Senate Bill 2097, which eliminates parking requirements for any property located near public transit. Contrary to Metro's claims, this Project will result in population / housing growth because State Legislation has approved numerous housing bills that incentivize more housing near transit centers. The numerous new State housing bills promote incentives for developers to construct more housing and therefore increase population.

f. Section 3.4-4.1.1, Construction impacts: The DEIR fails to provide an accurate constriction timeline. The "temporary" construction is expected to last 5-6 years. The sensitive receptors will be impacted. The DEIR fails to provide ways to mitigate the construction impacts on air quality.

g. Table 3.4-14, Project Construction Regulatory Control Measures: The DEIR fails to provide information on the proposed mitigation plan to water and reduce fugitive dust, Rule 403 fugitive dust.

All three Project "options" will require mitigation for air quality. The proposed Project and its options will be moving material to and from the Project area. The ROW option will require relocation of existing railroad tracks, which will require demolition of existing tracks. The trench option will require digging and moving of dirt, and the Hawthorne Boulevard option will required demolition or relocation of existing high power electricity lines.

SCAQMD RULE 403 (FUGITIVE DUST)	
Backfilling, Clearing and Grubbing, Cut and fill, Demolition, Disturbed soil, Earth-moving activities	Apply water to materials/stockpiles to prevent visible dust plumes and stabilize wind erodible surfaces.
Importing/exporting of bulk materials	Maintain at least six inches of freeboard on haul vehicles; use tarps or other suitable enclosures.
Road shoulder maintenance	Apply chemical dust suppressants and/or washed gravel to maintain a stabilized surface after maintenance.
Staging areas	Limit size of staging areas and limit vehicle speeds to 15 miles per hour.

4. **Biology:** The Biological Resources section of the DEIR is in complete and inadequate. The Biological Resources section of the DEIR did not identify, study, or properly mitigate the potential biological impacts with regards to bird surveys or special status species. (*See e.g.,* DEIR p. 3.2.3.) The Project site has acres of existing trees throughout the ROW and the Hawthorne Boulevard corridor areas; yet, no surveys were completed to determine the limits and potential impacts the proposed Project could have on biological resources. In addition, the DEIR failed to provide an inventory of existing trees within the proposed area. It is crucial to know the types of trees that are being removed since different species, such as the Monarch Butterfly, utilize available trees as migration resting points.

   Furthermore, deferred mitigation is inconsistent with CEQA Guidelines. DEIR Section 3.7-1.1, Federal Regulations Migratory Bird Treaty Act, proposes deferring mitigation measures by completing a Pre-Construction Nesting Bird Survey; this deferral of potential mitigation does not address the potential biological impacts that the Project could have on the environment.

   a. Section 3.7-3.4, Sensitive Biological Resources Within the RSA: This section of the DEIR mentions plant and animal species that have potential to occur and are protected under the Migratory Bird Treaty Act (MBTA) and California Fish & Wildlife. The species named under the DEIR show low potential to occur and one plant species with high potential to occur. The DEIR did not complete an assessment or study on the current conditions of habitat, thus there is no determination on potential impacts during construction. The DEIR is stating that the proposed Project would be Less Than Significant Impact with Mitigation for all three options by conducting a pre-construction survey. How was this assessment made without first completing a special species survey of the area to justify less than significant impacts on Biological Resources? It would be impossible to arrive at this conclusion without first basing the assessment on completed special surveys conducted by a licensed and certified biology expert.

   b. Section 3.7-4.1.2, Operational Impacts: The DEIR states there will be Less Than Significant Impacts with mitigation. However that conclusion is self-contradictory given the statement that "Potential direct impacts may

subsequently cause nest abandonment (and this loss of young), nest failure, or direct mortality of individuals." Metro is proposing to mitigate with routine maintenance, however no routine maintenance plan was provided The Trench option was also identified as Less Than Significant Impacts with mitigation, and the Hawthorne Option Less Than Significant Impacts without any mitigation. A survey should be conducted and a plan should be prepared by an expert providing ways to mitigate potential loss of wildlife.

c. Section 3.7-4.2, Riparian or Fish and Wildlife: This section states No Impact under Construction and Operation of all three Project options. However, in the list provided of potential endangered species some vegetation is identified as potentially to occur. No study has been conducted and a No Impact determination cannot be made without sufficient information.

d. Section 3.7-4.4, Native or Migratory Species Corridors or Nurseries: Project interference with any native resident or migratory species. This section states No Impact under Construction and Operation of all three Project options. However, in the list provided of potential endangered species some wildlife is identified as potentially to occur. No study has been conducted and a No Impact determination cannot be made without sufficient information.

5. **Energy:** The DEIR does not mention that a purchasing power agreement with Edison is needed to run the light rail train. There was no analysis on how the project will be energized and where the power will be coming from. The power purchasing agreement must also be approved by the California Public Utilities Commission ("CPUC").

   a. Page 3.12-11 Metro Energy conservation and Management Plan (ECMP), the DEIR states that solar panels will be installed in the year 2022. Has or will this be part of the construction of the rail system? Is the stated timeframe still accurate given that 2022 has passed? Where will the panels be located? The information is unclear and deficient.

6. **Geology & Soils:** There is a lack of mitigation for the proposed Project in case of an earthquake within the vicinity.

   a. Section 3.8-3.7, Landslides and Slope Failures: This section lacks data on the potential impacts for the areas identified in the map as landslide prone area.

7. **Green House Gases:** The proposed Green House Gases ("GHG") mitigation measures are not adequate. Deferral of mitigation measures is inconsistent with the CEQA Guidelines. On DEIR page 3.5-5, it states that building public transportation would reduce vehicle miles travelled, however there is no supporting data to show that this is the case. A GHG study must be prepared

and analyzed to ensure appropriate mitigation measures are incorporated into the Project.

a. Table 3.5-3, City of Lawndale – Relevant GHG Emissions, Goals, Policies and Programs: The DEIR states that goals from the Lawndale Air Quality Management Plan were incorporated as they would be relevant to the GHG emissions from the transportation and transit sector. City of Lawndale's Climate Action Plan Goal "LUT:C" encourages public transit by implementing a Bus Rapid Transit System. The City's CAP or AQMP does not recommend or provide goals or policies that support a light transit system.

    i. The DEIR is not consistent with the GHG Emissions, Goals, Policies, and Programs for the City of Lawndale. Goal 1- The City shall promote air quality and mobility in an environment of continued population growth, while providing for a healthy economic base. The City will work towards reducing VMT through an improved job/ housing balance and more efficient urban land use plan. Goal No. "LUT:C" Encourage transit through the implementation of a Bus Rapid Transit System and expand the sub-regional public transit network and enhance transit frequency through collaboration with SBCCOG and neighboring cities, as well as the prioritization of funding around transit stations to promote active transportation.

b. Section 3.5-2 Methodology: The DEIR explains that there will be environmental effects on GHGs temporarily during the Project construction and during future operation following the completion of the Project. This section mentions what was used to calculate the data, however there is lack of information on what or how this was conducted.

c. Section 3.5-2.1 Resource Study Area: This section states that the regional GHG emissions are evaluated primarily at the Metropolitan Planning Organization (MOP) level but does not specify if it was at Regional or Local levels.

d. Figure 3.5-1, Resource Study Area Map: The map should be analyzed locally, not just regionally. The study area is deficient.

e. Section 3.5-2.2, Construction GHG Emission: This section talks about temporary GHG emissions during construction from the use of heavy-duty haul trucks. Also, it states that the GHG emissions will be amortized over a 30-year operational lifetime. There are no mitigation measures or data backing up this claim.

    And, in the last sentence of this section, it is stated that construction "would take approximately five." Approximately five what? Months, Years? Does this account for potential unforeseen delays?

f. Section 3.5-10, Operational GHGs: The DEIR mentions that the proposed Project would reduce the sources of regional GHG because of increased ridership. What is the nexus between the two arguments? What warrants that ridership will increase to reduce GHGs? Are there any case studies associated with this claim? The DEIR does not adequately account for GHG (and other impacts) associated with rail riders driving automobiles either to a rail station (e.g., "park and ride"), or from a rail station to their endpoint destination.

g. Table 3.5-10, Operational Parameters: This table data does not have any information backing up the numbers. Provide a justification and basis for the numbers tabulated here.

    i. *Indirect Power Supply Emissions*: The last paragraph of this section sets forth deferred mitigation based on renewable energy requirements by the State, which is inadequate for the current conditions. What mitigations are proposed for the current electricity usage before the State becomes 100 percent renewable? The impact is significant and must be mitigated.

h. Section 3.5-2.4, Significance Thresholds: The proposed Project and Project options will be generating GHG emissions directly and indirectly. It also conflicts with the SCAQMD by stating that there are no thresholds for new light rail Projects; however, as part of this Project there is a locomotive freight rail system that is proposed to be moved and this is not mentioned within the GHG analysis.

i. Section 3.5-2.5, CEQA Streamlining: This section claims that air quality will improve. There is no data or metrics supporting this.

j. Section 3.5-3.1, California GHG Emissions: There is no study showing the wall built for the proposed Project. Provide information on how this will affect GHGs.

k. Sections 3.5-1.1 and 3.5-3.2: These discussions are not tailored to be Project related as they relate and rely on regional data. These should be be looked at a local level.

l. Section 3.5-3.3, Effects of COVID 19-Pandemic: This discussion suggests that there are no determinations on how the pandemic affected ridership. The DEIR takes the approach of a proffering a deferred study in or around 2042. There should be enough data from 2019, years prior, and 2022 to make a determination on ridership rather than deferring analysis.

m. Table 3.5-1.13, Proposed Project Table: This table is deficient and incomplete. There are no baselines to determine a less than significant impact.

n. Table 3.5-14 Trench Option Table: This table is deficient and incomplete, there are no baselines to determine the outcome.

o. Section 3.5-4.1.2, Operational Impact: The DEIR states that "Metro network GHG emissions displacement through mode shift by 3,721.4 MTCO2e, which represents an additional two percent reduction relative to 2019 Metro operations summarized in Table 3.5-12." This statement has no supporting data or studies. This section states that there are less than significant impacts, however there are no mitigation measures or supporting data attendant to this conclusory determination. Lawndale objects that the statements here are not accurate as to all Project options.

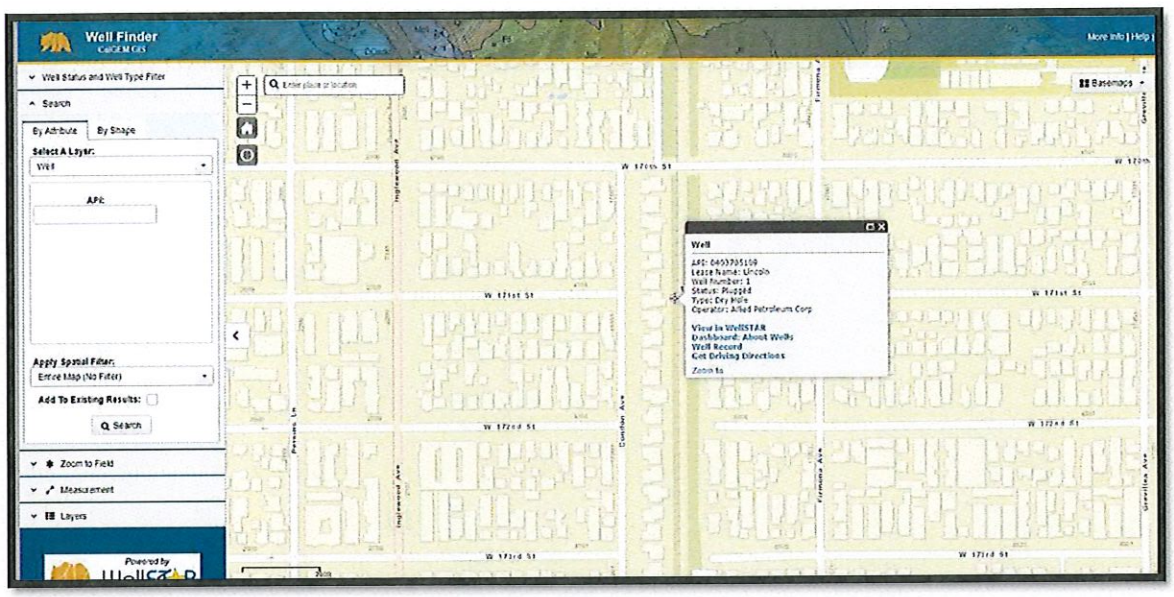
p. Section 3.5-4.2.1, Construction Impacts: The DEIR states that the Project would not conflict with any applicable policy or regulation adopted for the purpose of reducing emissions of GHGs. However, this statement is false. All the determinations were made without studies and without mitigation measures for construction and operational phases. The wait time at the crossings will create significant impacts on GHG emissions by idling traffic not analyzed in the DEIR.

q. Section 3.5-7, Cumulative Impacts: The information provided in this section of the DEIR is deficient and lacks information. There are portions of the proposed Project that are not evaluated, such as the construction of a sound wall, the construction of the widening of the bridge over Artesia Boulevard, as well as the construction of future development within the region.

See, Senate Bill 743: "...reduction of vehicle miles traveled that contribute to GHG emission as required by AB 32. SB 743 requires the State Office of Planning and Research (OPR) to develop revisions to the CEQA Guidelines, establishing criteria for determining the significance of transportation impacts of Projects within transit priority areas that promote the reduction of GHG emissions, the development of multimodal transportation networks , and a diversity of land uses."

8. **Hazardous Materials:** There is an Allied Petroleum Corporate Well within the existing right-of-way. The DEIR also states under the Air Quality section that there will be approximately 10% of contaminated soil. A Phase I study was conducted; however, a Phase II and Phase III remediation plan should have been prepared as part of the study. Thus, there are potential significant impacts that have not been addressed.

The diagram below provides the location of an existing well within the ROW in the City of Lawndale.



The DEIR does not provide sufficient information on the existing freight train. A study should be conducted to demonstrate how relocating the railway may expose sensitive receptors to hazardous materials and such impacts should be mitigated.

9. **Land Use:** Relevant regulations for the proposed Project do not support the light rail system. *See,* Lawndale General Plan Land Use Element, Table 3.2-2. Goal 1 of the Lawndale General plan requires the following: "Preserve and enhance the environment, values, aesthetic character, and image of Lawndale as a vital, attractive, desirable, and safe urban community." The proposed Project and its options are not consistent with this Goal 1 as it would decrease the aesthetic character, attractiveness, desirability and would not promote public safety.

    a. Section PR-AES-1, Local Zoning Ordinances: The Project components will NOT adhere to Lawndale's zoning ordinances. The City identifies the existing rail road right-of-way as Public Facilities/Open Space in the City of Lawndale's General Plan. These types of uses are identified as prioritized limited resources.

    See Lawndale Land Use Element Policy 1a: "Maintain the existing Residential development pattern, except in locations along major transportation corridors and public centers where Commercial or higher density." The proposed Project is to go through the ROW, which is a low density residential area with local and collector streets. The Project does not conform to the City of Lawndale's General Plan Land Use Element.

The proposed Project and its options are not consistent with the City of Lawndale's Zoning Ordinance Policies mentioned in the DEIR.

Table 3.2-5 The statements made in the chart below are false and lack data to support the information provided.

City of Lawndale, General Plan	
Land Use Element Policy/Goals: • Goal 1: Preserve and enhance the environment, values, aesthetic character, and image of Lawndale as a vital, attractive, desirable, and safe urban community; • Policy 1a: Maintain the existing Residential development pattern, except in locations along major transportation corridors and public centers where Commercial or higher-density Residential uses are more appropriate; *Circulation Element Policy/Goals:* • Goal 1: Provide an integrated transportation system for the safe and efficient movement of people and goods with minimal disruption to the environment within and through the City; • Goal 2: Consider all modes of transportation; and • Goal 5: Participate in and assist with coordinating regional efforts which integrate the City's transportation system with the regional transportation system.	**Consistent.** These policies support maintaining: • land use patterns except for major transit corridors • a viable and desirable community • integrating public transportation facilities and encouraging all modes of transportation In addition to the consistency of these policies, there would be no change to existing land use patterns.

The table below indicates "City of Lawndale Necessary Regulations." What does Metro mean by "Necessary"?

	City of Lawndale Necessary Regulations	
	Zoning Regulation	To encourage the most appropriate use of land
	Zoning Regulation	To conserve and stabilize the value of property
	Zoning Regulation	To provide adequate open spaces for light and air and to prevent and fight fires
	Zoning Regulation	To prevent undue concentration of population
	Zoning Regulation	To lessen congestion on streets
	Zoning Regulation	To facilitate adequate provisions for community utilities and facilities, such as transportation, water, sewerage, schools, parks, and other public requirements
	Zoning Regulation	To protect and promote the health, safety, and general welfare, all in accordance with the comprehensive general plan

The chart below is a continuation of the abovementioned chart. It shows Goals and Objectives for the Hawthorne Boulevard Specific Plan. The DEIR fails to meet and provide the information listed below.

Hawthorne Boulevard Specific Plan	
Plan's Purpose	Develop appropriate land use categories and development standards
Plan's Purpose	Ensure General Plan consistency
Plan's Purpose	Prepare design guidelines for signs, streetscape, and landscaping
Plan's Purpose	Make recommendations for circulation and other improvements
Plan's Purpose	Establish a conceptual framework for physical improvements to Hawthorne Boulevard
Plan's Purpose	Provide program and policy assistance for rehabilitating and revitalizing existing structures and businesses

Source: City of Lawndale General Plan, 1992a;1992c; 1999

The proposed Project would physically divide the established community of the City of Lawndale. Currently a freight train passes twice per day, which allows both the east and west side of the City to be connected. Adding the light rail train would divide the City as it would have light rail passing by every 15 minutes creating many environmental impacts interrupting the community.

10. **Noise and Vibration:** The proposed mitigation measures and noise study are inadequate. The noise study did not analyze potential noise impacts on sensitive noise receptors for the proposed residential component of the Project with regards to the existing and proposed commercial expansion. In addition, no mitigation measures were proposed that would protect sensitive noise receptors for the proposed residential component of the Project from excessive noise and vibrations from the proposed and existing commercial component of the Project.

    The DEIR states that noise and vibration will only cause annoyance to the residents, which is false, particularly given the massive increase in train frequency pursuant to the Project. The DEIR fails to address the public health issue caused by noise pollution and the public safety issue caused by constant vibration to the homes located near the ROW. According to a the National Geographic Encyclopedia "Sounds that reach 85 decibels or higher can harm a person's ear. Sounds that exceed this threshold include familiar things, such as power lawn mowers (90 decibels), subway trains (90-115 decibels, and loud rock concerts (110-120 decibels)." Noise pollution can cause induced hearing loss (NIHL). "Exposure to loud noise can also cause high blood pressure, heart disease, sleep disturbances, and stress." The DEIR fails to address the long-term impacts of noise and does not propose any mitigation.

The DEIR does not evaluate the noise from the wheels of the trains. A mitigation for rail and wheel lubrication is required to reduce noise levels.

Sound walls were discussed however not analyzed under the DEIR. Additionally, the sound walls are not shown in any of the elevations for the proposed Project and the options.

Studies have shown and proven that constant vibration to older residential structures will compromise the structural integrity of a residence. Metro has not acknowledged how the constant vibration of the light-rail system will be mitigated. The proposed light rail system will be adjacent to hundreds of residential structures that were built from the 40's, 50's and so on. All the existing residential structures will be susceptible to the constant vibrations emanated by the proposed light rail Project. Metro has failed to demonstrate any mitigations.

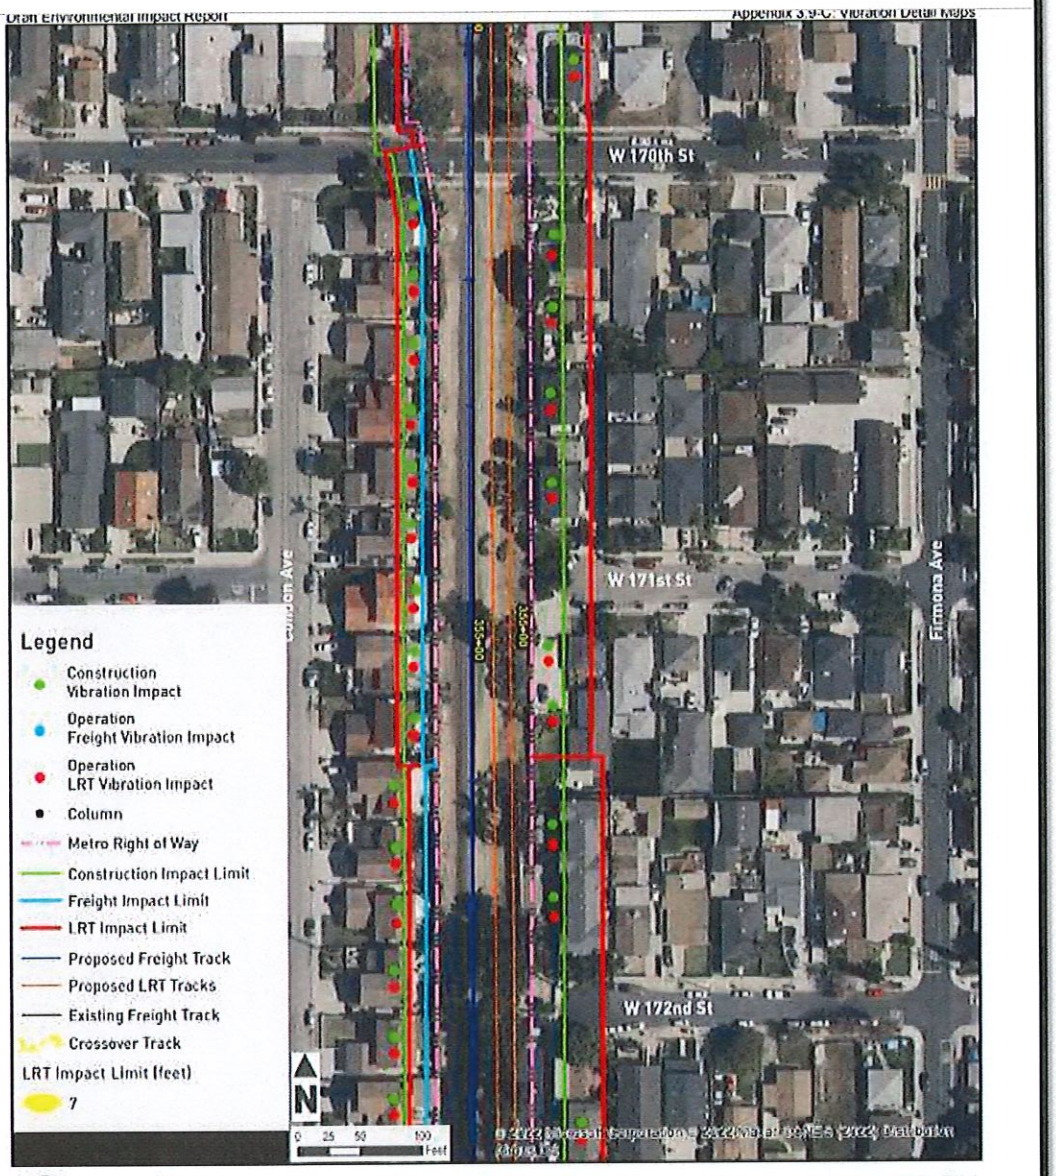


Figure 3.6-C11
Construction & Operational Vibration Impacts
Proposed Project

The above figure from the DEIR show how the residential areas will be impacted by both construction phase and the operational phase of the proposed Project and trench options. This affects all the residential areas along the ROW, with Lawndale having the largest area of potential residential impacts.

a. Section 3.6-1.2 Federal Regulations mention a potential mitigation by establishing a "quiet zone" with "no horn" restriction for the proposed

crossinngs. The DEIR states supplemental safety measures for the "quiet zone" areas. The proposed mitigation has not been studied or analyzed with the existing railroad crossing within the City of Lawndale. The DEIR is deficient in identifying the potential impacts of implementing quiet zones within the crossing areas.

b. Section 3.6-5, Mitigation Measures MM-NOI-1 Noise Control Plan: This mitigation does is deficient there is not specific plan to control noise. This mitigation is deferred.

c. Mitigation Measure MM-VIB-3: Pre- and Post Construction Surveys: This section states that the construction noise would be less than significant impact. This determination is not accurate as noise mitigation was not implemented correctly.

d. Page 3.6-49: The impacts of the combined noise of the light rail with the freight impacts are significant. No forms of mitigation or mitigation analysis are presented to reduce such impacts.

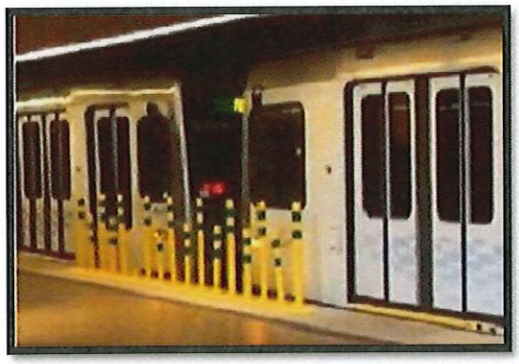
11. **Population and Housing:** The DEIR does not provide adequate analysis of the proposed Project as it pertains to the population and housing impacts that this Project will generate, which is required to be reviewed under CEQA. The analysis states the Project will have no impacts to population or housing in the DEIR. The DEIR fails to address or take into account that the proposed Project would induce substantial population growth either directly or indirectly and failed to identify the new housing laws around public transport.

    a. Property Inventory, Residential Impacts: Studies have shown that residential real estate properties that are adjacent and near rail lines are negatively impacted. The DEIR fails to provide information on the impacts to nearby residential. In addition, Metro must provide a detailed inventory of all properties that are located within a quarter (1/4) of a mile of the proposed light rail Project and demonstrate property that will be impacted.

    b. Homelessness Impacts: Railway setbacks, bridge undercrossing and ROWs are a draw to those experiencing homelessness. While social justice and social impacts issues are not always required in a CEQA analysis, such issues must be analyzed where the social impact issue will result in physical construction or changes to the environment. A draw to homeless populations in the Project area will not only result in direct changes to the environment in the form of transitory encampments but would also necessitate the construction of homeless shelters and/or other physical accommodations to the homeless population.

12. **Public Safety/Public Services:** Under 49 C.F.R. § 38.85, where light rail vehicles operate in a high-platform, level boarding mode, devices or systems must be provided to prevent, deter, or warn individuals from inadvertently

stepping off the platform in between cars. The intent of this provision, which has been a part of the DOT ADA regulations since September 6, 1991, is to require light rail systems to obtain suitable devices to assist with and prevent passengers from mistaking the gap between cars for a doorway and potentially falling onto the track bed. The regulation provides that appropriate devices include, but are not limited to, pantograph gates, chains, motion detectors, or other suitable devices. This document fails to identify how this issue will be addressed. Some examples of the existing barriers are shown in the following images:



"9.02 Standards For The Installation Of Barriers. When the separate right-of-way of an LRT system occupies the median of a divided arterial highway with fully controlled grade-separated access or is contiguous to such a highway, Caltrans'

standard barriers of the following types shall be installed under the conditions indicated":

Distance from Center Line of Track to Edge of Nearest Travel Lane on Roadway	Type of Barrier
36 feet or less	Rigid concrete barrier at least 32 inches in height above the roadway.
Greater than 36 feet up to 45 feet	Rigid concrete barrier as specified above or semi-flexible metal barrier (thrie, W, box or other comparable beam) at least 33 inches in height above the roadway.

Fire protection requirements: "11.01 Fire Protection Requirements. All LRT systems shall establish fire protection requirements to control potential fire hazards. The minimum requirements for underground segments of the LRT system shall be as specified in the Standards for Fixed Guideway Transit Systems published by the National Fire Protection Association (NFPA 130). The minimum requirements for all other segments shall be established by the LRT system based upon a documented engineering analysis of the factors affecting fire hazards and fire risks using NFPA 130 as a guide." The DEIR does not address this aspect of the CPUC requirements.

The proposed Project would have significant impacts on public safety services, during construction and during operation. Ambulances, fire trucks and police would be heavily delayed by the construction of the Project and its options which would last approximately 5-6 years. "...Closure of major arterial crossings due to trains can cause delays up to five to six minutes on streets such as Inglewood and Manhattan Beach Boulevard.. Delays on these major arterials cause delays at nearby intersections as well when queue length grows. The LOS (levels of service) declines at the intersections feeding adjacent to the major arterials where the queue length have grown due to crossing closures. In addition, the angle at which the railroad line traverses the mostly north-south orthogonal grid roadway system further exacerbates traffic congestion in that area." (Downey, Cheryl, Southbay Cities Railroad Study.)

- Several discussions in the DEIR present the theory that public safety services (e.g., response times) will not be significantly impacted because train crossings will only be "occasional" and because emergency services can simply "detour" around rail crossings. Both observations are without merit. As addressed further above, the frequency of train interruptions at intersections is much more than "occasional"—especially considering the current baseline condition

of only two trains per day. Further, while public safety/services vehicles *can* detour around train crossings, so will all other vehicles on the road. Hence, public safety response times will inevitably slow, along with all other traffic. Thus, the mere availability of detours cannot serve as a legitimate basis to disregard the negative impacts on public safety response times.

The DEIR proposed Project and its options will cause health issues. According to the Beach Cities Health District Multimillion Dollar Blue Zones Project research findings. " …Widening its main street and raise speed limit, which, Buettner (Blue zones CEO) said, 'creates stress, danger, noise pollution and air pollution'."

The DEIR does not evaluate public benefits to be provided by Metro for each City.

The DEIR has failed to include the disruption of resident's daily routines. William Green Elementary School and Environmental Charter High School are both one block east from the proposed light rail Project. The excessive number of daily trips from the light rail are not recognized, acknowledged, or mitigated. The number of daily trips proposed by Metro will create a significant impact on the children of residents attending the nearby schools. It is an utmost importance that children have a healthy and quiet environment to facilitate their education and safety. The DEIR has failed to demonstrate infrastructure mitigation measures consistent with the safe routes to school program that aims to increase public safety.

The picture below shows the proximity of William Green School to the ROW.

13. **<u>Traffic/Transportation Impacts:</u>** The proposed Project will have tremendous traffic environmental impacts on the regional and locally-based on the scale and scope of the Project. The DEIR is incomplete, deficient, inadequate and does not analyze traffic impacts to local roadways or to Caltrans freeways, including the

State Route 405. The DEIR failed to address traffic impacts or provide measurable mitigation measures. There is insufficient information or data to make any determination on potential impacts.

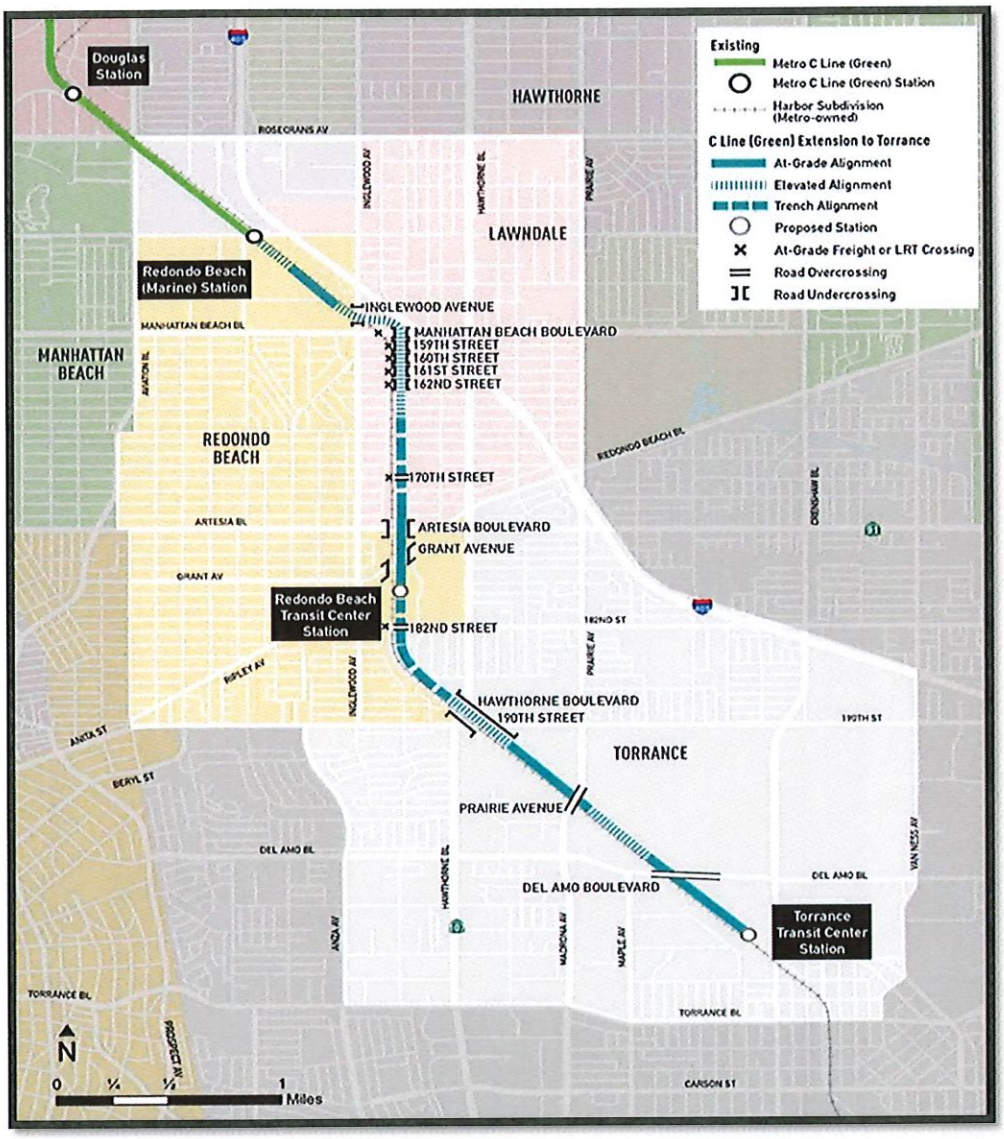
The DEIR states that Metro staff will prepare its recommendation on the preferred alignment in Spring 2023. It is not clear if the "preferred alignment" will be based on the 170th/182nd Grade-Separated Light Rail Transit Alternative, or if there will be potential for a hybrid alternative subject to the stakeholders' comments / public input they will be receiving.

Based on the review of the proposed Project and the presented options, the 170th/182nd Grade-Separated Light Rail Transit Alternative seems to be most relevant within reasonable Project alternatives to the proposed Project that could meet most of the basic Project objectives and substantially reduce or eliminate significant impacts associated with the Project.

- The Alternative states that "This Alternative would be entirely grade-separated with six over-crossings in the north (between Inglewood Ave and 162nd Street) and two below-grade crossings at 170th and 182nd Streets". However, the Figure ES-15 below shows that within the City of Lawndale just north of Artesia Blvd, there's a segment that is at grade. This needs to be clarified and effects (such as pedestrian bicycle and vehicular safety) on at-grade intersections need to be evaluated.

- Could impact freeway traffic, and street traffic near offramps, and increase further congesting of traffic.

Figure ES-15. Overview of 170th/182nd Grade-Separated Light Rail Transit Alternative



Indeed, the DEIR identifies the proposed Project's traffic impacts as significant and unavoidable. However, the Project's traffic analysis and the Project alternative analyses do not provide sufficient information to support the conclusion that traffic impacts cannot be feasibly mitigated under a less-intense Project alternative. Any one significant unavoidable impact requires disapproval of the proposed Project unless feasible mitigation measures or alternatives do not exist and specific benefits outweigh the significant impact. (Pub. Resources Code § 21081.) CEQA requires public agencies to deny approval of a Project with significant adverse effects when feasible alternatives or feasible mitigation measures can substantially lessen such effects. (Pub. Resources Code § 21002;

Sierra Club v. Gilroy City Council (6th Dist. 1990) 222 Cal.App.3d 30, 41.) The Legislature has stated:

> "[I]t is the policy of the state that public agencies should not approve Projects as proposed if there are feasible alternatives or feasible mitigation measures available which would substantially lessen the significant environmental effects of such Projects. . . ."

(Pub. Resources Code § 21002.) The CEQA Guidelines require an agency to "Disclose to the public the reasons why a governmental agency approved the Project in the manner the agency chose if significant environmental effects are involved." In order to implement this policy, the CEQA Guidelines specify that:

> "A public agency may approve a Project even though the Project would cause a significant effect on the environment if the agency makes a fully informed and publicly disclosed decision that: (a) There is no feasible way to lessen or avoid the significant effect..."

(CEQA Guidelines § 15043.) Feasible means "capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, social, and technological factors." (Public Resources Code § 21061.1.) Project alternatives remain feasible "even if these alternatives would impede to some degree the attainment of the Project objectives or would be more costly." (CEQA Guidelines § 15126.6(b).)

CEQA's purpose of avoiding, or substantially reducing, environmental impacts of a Project through the adoption of feasible alternatives is defeated where an EIR fails to ensure that information about potentially feasible alternatives is subject to public and decision maker review. It also fails when an EIR fails to include alternatives that actually reduce a Project's impacts below thresholds of significance. Smaller scale versions of the proposed Project that avoid or reduce significant impacts would meet most of the objectives and should be adequately analyzed in the EIR.

The objectives stated in the DEIR do not provide a Project of any specific size or scale, and, more importantly, all of the City's objectives could not be met with a scaled-down Project that requires little, if any, diversion from existing land use regulations. Furthermore, because this intense development will have unavoidable significant impacts on this site, off-site locations should be considered. Off-site alternatives should be considered when "significant effects of the Project would be avoided or lessened by putting the Project in another location." (Guidelines § 15126.6(f)(2)(A).)

The DEIR lacks information on how it will impact the City's General Plan Circulation and Safety Elements.

The DEIR fails to include a Traffic Operation Study ("TOS") document for any of the alternatives or options.

The DEIR refers to the City of Lawndale's 1991 General Plan/ Circulation Element and to the adopted 2015 General Plan/ Safety Element. Although Section 3.1 apparently attempts to address Policies 1 and 4, it totally ignores Policies 2 & 3. Specifically, Policy 2. C pertaining Master Transportation Plan, and Policy 3. A. pertaining to Street System, Levels of Service (LOS). (Reference Table 3.1-2)

Table 3.1-2. City of Lawndale – Relevant Regulations

Code/Goal/Policy	Description
City of Lawndale General Plan Circulation Element	
Policy 1B	Provide necessary facilities to balance all travel modes, users, and for a variety of trip purposes. Transportation modes are prioritized in the following order: vehicles, public transit, pedestrians, bicycles where sufficient ROW exists, and freight
Policy 3A	Require or provide adequate traffic safety measures on all roadways
Policy 4A	Reduce daily and peak hour vehicle trips
Policy 5A	Work with regional transportation agencies to establish criteria to implement transit improvements and develop short- and long-term transit service plans, corridor improvements, transit centers, park and ride lots, and the preservation of rights-of-way for commuter rail stations
Policy 5D	Work with regional transportation agencies to plan and implement a commuter rail system, including routes, location of stops, service schedules, feeder bus routes, parking needs, a transit terminal/park and ride lot, and funding
City of Lawndale General Plan Safety Element	
Policy SAF-4.4	Provision of adequate access for emergency vehicles and evacuation in all new developments

Source: City of Lawndale, 1991a; 2015

The DEIR refers to the VMT method very briefly, and ignores the LOS method which is referred to as a standard in the City's 1991 General Plan, hence lacks sufficient information on how each alternative would impact the City's Circulation Element.

Most of the DEIR lacks specific information pertaining each alternative, it is thus deemed to be incomplete and impossible to further comment on the Project's traffic/transportation impacts to the City.

14. **Tribal Cultural Resources:** The DEIR states that one Tribe proposed to be a part of the consultation process. It is the Lead Agency's responsibility to begin consultation with the Tribe within 30 days of receiving notice from the Tribe. The DEIR states emails were sent and no response was received. Best management practices would reach out to the Tribe by phone and formal mailed notice, not just an email contact.

15. **Utility Service Systems:** The DEIR fails to address how the proposed Project or its options will meet the requirements of the California Public Utilities Commission. The CPUC has safety rules and regulations for light-rail systems

including breaks, construction. Lighting on light-rail vehicles, speed, fire protection, traction etc. The DEIR is deficient in providing this information. There are sections in the DEIR where it is mentioned that CPUC approval is required for the Project, but descriptions of such approvals or standards therefore are lacking.

DEIR page 2-48, under the Project Description, ambiguously states that some existing utilities would need to be relocated. There are some major power lines located near the Hawthorne option by the 405. The approach as to how that will be handled is not described in the document; the description for this option and potential utility work is deficient.

The comments described above certainly do not represent a complete list, but are demonstrative of the fact that there are many issues related to the proposed Project that were not adequately addressed in the DEIR. Lawndale incorporates by reference other public comments submitted upon the DEIR.

CEQA was enacted to promote environmental protection and encourage governmental transparency. (*Citizens of Goleta Valley v. Bd. of Supervisors (1990) 52 Cal. 3d 553, 564.*) CEQA requires full disclosure of a Project's significant environmental effects so that decision makers and the public are informed of these consequences before the Project is approved, to ensure that government officials are held accountable for the consequences. (*Laurel Heights Improvement Ass'n of San Francisco v. Regents of the University of California* (1988) 47 Cal.3rd 376, 392.) In order to satisfy CEQA and protect the quality of life in the surrounding region, Lawndale requests that if the Project is not rejected outright, that the DEIR be revised to address the deficiencies identified in these comments and be recirculated to the public prior to preparation of a final EIR.

The members of the Lawndale City Council would like to make it clear that the City has significant concerns about the proposed Project, as is presented in the DEIR. Furthermore, we encourage Metro to work with Lawndale, as well as the communities adjacent to the Project site, to arrive at a solution that is a benefit, rather than a burden, to the surrounding area as a whole.

Sincerely,

Robert Pullen-Miles
Mayor

Metro Board

CITY OF
TORRANCE

GEORGE K. CHEN
MAYOR

January 21, 2026

Honorable Fernando Dutra, Chair
Los Angeles County Metropolitan Transportation Authority
Board of Directors
One Gateway Plaza
Los Angeles, CA 90012

RE: Item 11 – C Line Extension to Torrance Final EIR – SUPPORT STAFF RECOMMENDATION

Item 11.1 – Mitchell/Sandoval/Dupont-Walker Motion – OPPOSE

Dear Chair Dutra and Members of the Metro Board of Directors:

On behalf of the City of Torrance, we write to express our **strong support for Item 11**, Metro staff's recommended Locally Preferred Alternative (LPA) also known as the Right-of-Way (ROW) Hybrid Option for the C/K Line Extension to Torrance, and to **strongly oppose Item 11.1**, the counter-motion introduced by Directors Mitchell, Sandoval, and Dupont-Walker that would select the Hawthorne Boulevard Alternative.

The staff-recommended Locally Preferred Alternative (LPA) utilizes existing Metro Right-of-Way to deliver a 4.5 mile, fully grade-separated light rail extension, avoiding encroachment on the I-405 Freeway and minimizing impacts to businesses, traffic flow, and parking along Hawthorne Boulevard. According to Metro's assessments, it is also the most cost-effective and time-efficient option, offering the fastest delivery timeline and nearly $800 million in construction cost savings compared to the Hawthorne Boulevard Alternative.

By contrast, the Hawthorne Boulevard Alternative would inflict catastrophic economic harm on the City of Torrance, the South Bay region, and Los Angeles County as a whole. This option would place a fully elevated light rail structure down the center of Hawthorne Boulevard, the South Bay's primary commercial pathway, requiring an estimated five to seven years of disruptive construction. Travel lanes would be reduced, access to businesses restricted, parking eliminated, and congestion significantly worsened for the more than 70,000 motorists who use the corridor daily.

Construction of the Hawthorne Boulevard Alternative would require years of lane reductions, road closures, and parking elimination along this critical corridor, resulting in:

- Severe traffic congestion throughout the South Bay
- Reduced visitor and shopper access to Torrance businesses
- Permanent loss of customers who find alternative shopping destinations
- Business closures and job losses that may never recover
- Cascading economic harm across the entire South Bay region

The Board must understand what is at stake. Torrance is the third highest sales tax generating city in Los Angeles County and home to Del Amo Fashion Center, the largest shopping center in Los Angeles County and the second largest in California. They receive as many annual visitors as Disneyland, generating billions in economic activity that support jobs, schools, and public services not just in Torrance, but across the entire region.

The economic consequences of the Hawthorne Boulevard option extend far beyond Torrance and would result in substantial, measurable losses:

Impact Category	Annual Exposure	5-Year Exposure
State Sales Tax Revenue at Risk	**Over $357 Million**	**Nearly $1.8 Billion**
LA County Sales Tax Revenue at Risk	**Nearly $164 Million**	**Over $818 Million**
City of Torrance Sales Tax Revenue at Risk	**Over $28 Million**	**Over $142 Million**

These are not speculative figures. They represent real revenues generated specifically along the Hawthorne Boulevard corridor in Torrance, revenues that fund real schools, real services, and real families throughout Los Angeles County. The $164 million in annual impact stems directly from reduced sales tax collections in Torrance - collections that fund Proposition A, Proposition C, Measure R, and Measure M obligations.

The City of Torrance has consistently supported extending light rail to the South Bay using the existing Metro Right-of-Way through the Locally Preferred Alternative (ROW Hybrid Option) since 2018. This position has been endorsed by the Torrance City Council, and is supported by the Torrance Planning Commission, Torrance Traffic Commission, Torrance Auto Dealers Association, Torrance Chamber of Commerce, Downtown Torrance Association, South Bay Forward, the League of Women Voters, Move LA, and more than 1,000 Torrance residents and businesses.

Most recently, on March 12, 2024, the Torrance City Council once again reaffirmed its long-standing support for the ROW Hybrid Option. This position reflects years of careful evaluation, extensive public engagement, and alignment with Metro's own technical analysis.

Under the ROW Hybrid Option, the C/K Line Extension would support increase revenue generation and job creation while providing residents of Redondo Beach, Lawndale, Torrance, and Hawthorne with a seamless connection to the LAX People Mover and the broader Metro C and E Line systems. The alternative leverages prior public investments and delivers meaningful regional mobility benefits without inflicting unnecessary harm on existing communities.

The counter-motion argues that "lower cost should not be conflated with best value." We respectfully but firmly disagree. The nearly $800 million cost difference is not a rounding error; it represents funds that could address other critical South Bay transportation needs. Moreover, the counter-motion's reliance on a *draft* Caltrans policy that has not yet been finalized introduces unacceptable risk and uncertainty into the decision-making process.

The counter-motion further suggests that construction impacts can be "mitigated" through business support programs. However, no mitigation program can adequately compensate for five to seven years of restricted access to the South Bay's primary commercial gateway. Shoppers and visitors who are unable to easily access Torrance will seek alternatives elsewhere, and many may not return.

The Metro Board's decision on Item 11 and 11.1 will shape the South Bay's transportation and economic future for decades. We respectfully urge the Metro Board of Directors to:

✓ **VOTE YES ON ITEM 11** – Approve Metro staff's recommended Locally Preferred Alternative (Hybrid ROW Option)

✗ **VOTE NO ON ITEM 11.1** – Reject the Mitchell/Sandoval/Dupont-Walker counter-motion for the Hawthorne Boulevard Alternative

The South Bay has waited decades for quality light rail service. The staff-recommended Hybrid ROW Option delivers that service faster, at a lower cost, and without destroying the regional economy in the process. We respectfully urge you to make the responsible choice.

Respectfully submitted,

George K. Chen
Mayor, City of Torrance

Alternative 1 Metro Railroad Right-Of-Way (ROW) for the C-Line Rail Extension to Torrance

L.A. Metro is planning more rail in the South Bay. This will severely impact residents and businesses in Torrance if the C-Line (Green Line) goes down Hawthorne Boulevard. Let's keep the C-Line on the Metro Right-Of-Way (ROW) and off Hawthorne Boulevard. Visit transit.torranceca.gov for more information.

Alternative 1 Metro Railroad Right-Of-Way (ROW) for the C-Line Rail Extension to Torrance

L.A. Metro is planning more rail in the South Bay. This will severely impact residents and businesses in Torrance if the C-Line (Green Line) goes down Hawthorne Boulevard. Let's keep the C-Line on the Metro Right-Of-Way (ROW) and off Hawthorne Boulevard. Visit transit.torranceca.gov for more information.

Would you like to leave any comments regarding this project?

I have numerous negative comments on this project's placement. First of all, there is already an area for a railroad system at the ROW. It makes no sense to tear up Hawthorne Blvd. when there is already a ROW system nearby. The residents at the ROW were aware of the tracks when they moved to that location. The train tracks at the ROW have been at that location for over fifty years.

I have lived at my residence [redacted] for forty years with no awareness of a train to be put in on Hawthorne Blvd. The Metro train system would devastate the neighborhood on the east side of Hawthorne Blvd. south of Artesia. As a result, the property values in this neighborhood would drop. The noise from night and day construction would be a nightmare for those who live adjacent to the construction. Additionally, once the train has been built, the noise from the train would also impact the area.

At the ROW there will be noise mitigation in the form of a wall, a trench system for the tracks, and a walking path for the residents. For us on the Hawthorne Blvd. option there is none of that for these residents. So, we will have to live with constant noise and vibration from the project, both during construction and after construction.

Redondo Beach is already building its transit center at the ROW, so why would the train not stop there. It makes no economic sense to use Hawthorne Blvd. when there already is a ROW with a transit center being built at that location.

If the train is to go down Hawthorne Blvd, the City of Torrance would lose numerous businesses as a result of the train. And this would be a negative impact to the City of Torrance. Additionally, the construction of this project would heavily impact an already congested road system at Hawthorne and Artesia.

Finally, another impact of the train going down Hawthorne Blvd. is that the train system would be under the enforcement of the Sheriff's Dept. The Torrance PD would have very little enforcement in this area. As a result, crime in this area would go up.

The Metro system has admitted that the program has not been fully funded, so this in itself is a poorly organized project. There is nothing good about this project coming down Hawthorne Blvd. and into Torrance.

Thank you.

Please give the Right of Way to the train rather than cars when it is at-grade. We want to encourage more people to ride the train. If the train is stuck in traffic, the argument to get people out of their cars is less strong.

Would you like to leave any comments regarding this project?

I really do NOT want the METRO in Torrance at all. If I have to choose a location it would be choice #1 , ROW.

Would you like to leave any comments regarding this project?

I highly support the ROW plan vs the Hawthorne Blvd plan. Traffic & businesses would be greatly impacted by the Hawthorne blvd plan. I understand residence don't want the trains running close to their homes but they knew of the possibility when living near a railroad track.

Would you like to leave any comments regarding this project?

We live on Hawthorne across from the galleria mall and would lose all landscaping, trees, and buffer area between Hawthorne Blvd and our home if Hawthorne is widened to accommodate the overhead line if it runs along Hawthorne. There would be an additional stop light for pedestrian crossing and a station adjacent to our home. This would slow down Hawthorne traffic even more and have cars idling even more in front of our home between [redacted]. That would cause more noise and pollution blowing downwind to our home just east of Hawthorne. The Right of Way extension is less expensive, would run along an existing train line ROW, and allow for landscaping and other enhancements along the ROW. There would be no additional landscaping or benefits for our home and our neighbors as shown on the latest Metro designs for the Hawthorne option. Please keep the train line extension on the existing train Right of Way. Thank you.

Would you like to leave any comments regarding this project?

I have been a resident in Torrance for over 40 years. My family moved to North Torrance in the 70s and I now am married and raising my children here as well. Though we have seen and welcome changes in our city, we believe in maintaining the integrity of our neighborhood on [redacted] between Hawthorne Blvd and Prairie Ave. As a resident on the corner of [redacted], we believe adding the Metro C-line on Hawthorne would be detrimental to this neighborhood. Extending the Metro on the ROW offers many benefits like potential subterranean rail, landscaping, bike paths. In contrast, extending the Metro on Hawthorne would only offer a large structure, more traffic with additional pedestrian crosswalks, creating the potential for more congestion and accidents. Please keep the Metro on the ROW, where it would be safer and benefit the South Bay in many more ways and be less disruptive to an already congested Hawthorne Blvd. Thank you.

It does not make any sense to put the rail anywhere other than the Right of Way! Putting in down Hawthorne Blvd will take away precious land in an already congested area that is used for vehicles and other public transportation. It would be much more costly to put down Hawthorne Blvd than putting it along the already existing Right of Way!

Not only about the proposed extension regarding with the Metro C Line (Green) and the upcoming completion of the Metro K Line at Aviation/I-105 Station, but I want Torrance Transit to be extending with the proposed extension for Route 6 to South Bay Pavilion Mall and to Del Amo A Line (Blue) Station, and for the Route 9 proposed extension on Avalon Blvd. to South Bay Pavilion Mall in the city of Carson.

[redacted]

Would you like to leave any comments regarding this project?

I support using the existing ROW to get the project built faster and cheaper for a comparable level of service. Also, @Torrance Transit please get the city to invest more in transit and bike infra improvements before the extension opens, the location of the new transit center in an industrial area with no easy access to old town is unfortunate; and Torrance Transit has some of the worst headways in the region.

This railway would've been hugely beneficial to my sister, who had to drive out to the Redondo beach station every day to get to her internship in LA. It will make it much easier to reach LA from the heart of the South Bay and vice versa.

Would you like to leave any comments regarding this project?

The Hawthorne alternative will be more expensive and disruptive to build. It won't provide better service to the business corridor and is a really bad idea. Having seen how the A Line divides Long Beach Boulevard, but doesn't improve transit access, I'm strongly opposed.

Would you like to leave any comments regarding this project?

The original plan was to utilize the existing railway. It made the most sense and had the least amount of area disruption. I lived very close to that railway for two decades. ALL of the are residents understood the cons of living by an active railway. We also knew there were future plans to extend the "Green Line" using that right of way. Mitigate noise and use walls and undergrounding when plausible. There is a reason ALL of the area residents homes cost less than those further away from the rail. It is ridiculous that people would buy/rent homes near an existing feature, then whine and complain that they want the feature gone.

Would you like to leave any comments regarding this project?

I think it's fantastic the South Bay is serious about improving public transit and making it more accessible will help tremendously. We moved down from the Bay Area which was abysmal (mid-Peninsula area). Before that we lived in New York City, so we appreciate (and used) good transit when it exists!

I support the use and alteration of existing railroads because it is more cost efficient, time efficient, and least disruptive on commercial businesses and residential.

Hawthorne Blvd is already busy enough. We do not need the added traffic jams caused by heavy construction of the light rail system.

A critical part to the Southbay's transportation needs. It's insane to have travel 10 plus miles to the Crenshaw station in Hawthorne. This project needs completed now!

I'd like to suggest to use the money we are saving in NOT building a whole new railroad, be used to improve our city's schools and help our first responders. We'll be needing additional support to help with the homeless issues. I am a homeowner in Torrance and can start seeing more homeless and this is becoming a safety issue. We need to be ready for the increase in mental illness issues crimes and drug issues that unfortunately come with the homeless. There will be more non-residential people coming through the city with the new Bus Depo and the new metro and this will increase crime and the types of crime coming to our city of Torrance.

Would you like to leave any comments regarding this project?

Since 1990, this planned train has been scheduled to to be on the Right of Way Alignment. The residents of Redondo who are complaining about the project should have known of this, since that date. The plan to put it on Hawthorne is a new plan since 2017 when Redondo complained. This is not fair. This is not fair to the residents and businesses in Torrance who are in the area of Hawthorne Blvd. The Right of Way Alignment will also include mitigating factors for sound, vibration, dirt and aesthetics. The Torrance residents on Hawthorne Blvd. will get nothing to mitigate these negative effects. This project will also add to the already existent traffic and congestion on Hawthorne Blvd. Be fair, and put the train where it was planned to be. You cannot change the plan in the middle of the process. Torrance residents and businesses will be affected.

Thank you,
Randy & Martha Shetter

CITY OF
TORRANCE
TRANSIT DEPARTMENT

Kim Turner
Transit Director

310-618-6245
kturner@TorranceCA.Gov

March 27, 2022

Georgia Sheridan, Project Manager
Los Angeles County Metropolitan Authority
One Gateway Plaza, Mail Stop: 99-22-3
Los Angeles, CA 90012

RE: Metro C Line (Green) Extension to Torrance (DEIR) Public Comments

Dear Ms. Sheridan,

In an effort to educate, inform, and engage our residents, businesses and important stakeholders about the C-Line Extension to Torrance and the three (3) options that were studied in the DEIR, the City of Torrance sent out mailers and conducted online surveys to gather comments. Below is a summary of the 1,203 total comments and responses that we received:

- 79.47% of the comments support the Proposed Project: Right-of-Way Elevated/At-Grade;
- 6.57% of the comments support the Trench Option;
- 5.65% of the comments support the Elevated Hawthorne Blvd Option; and
- 8.31% of the comments do not support project at all and/or provided miscellaneous comments.

There are some common themes found in the comments we received:

- Concerns about crime and the unhoused on or at L.A. Metro properties;
- Concerns about increase in costs of the project with the Trench Options and Elevated Hawthorne Blvd. Option;
- Impact to businesses and homes on Hawthorne Blvd. for the Elevated Hawthorne Blvd. Option;
- The need for completing the project as soon as possible;
- Improving First-Last-Mile Connections; and
- Improving connectivity between buses and rail.

We look forward to the incorporation of these comments into the Draft EIR when completed. We have enclosed a copy of all the comments received.

Should L.A. Metro need to contact the City of Torrance please do not hesitate to contact David Mach at 310.781.6974.

Sincerely,

[redacted]

Kim Turner, Director
Torrance Transit System

As a City of Torrance resident, I would like to share my opinion on what light rail route I would like in the South Bay. *(Check one or more boxes)*

☒ Proposed Project: Metro Right-of-Way Elevated/At-Grade ☐ Trench Option ☐ Hawthorne Option

Additional Comments on the Draft Environmental Impact Report:

EITHER OPTION WILL INCREASE COST AND DELAY COMPLETION. MAP IS TOO SMALL TO READ STREET NAMES.

☒ Proposed Project: Metro Right-of-Way Elevated/At-Grade ☐ Trench Option ☐ Hawthorne Option

Additional Comments ~~on the Draft Environmental Impact Report~~:

I'm a daily Rider for public transit. Please don't delay the project any longer. no cost overruns either by Trench option/ Hawthorn option. Why Do there still no mass transit on 405 ?? Want to burn more oil ??? more pollution ? Get the gas Co Richer, more accident ??

We handle ~~Torrance~~ Ext in Torrance traffic Business Church

As a City of Torrance resident, I would like to share my opinion on what light rail route I would like in the South Bay. *(Check one or more boxes)*

■ Proposed Project: Metro Right-of-Way Elevated/At-Grade ☐ Trench Option ☐ Hawthorne Option

But extended to South Carson St Sepulveda Lomita – San Pedro Please –

Additional Comments on the Draft Environmental Impact Report:

Blue Line does not come near us. (just off Carson between Vermont + Normandie) This new center/end of line would either, Could it extend to Carson ~~Blvd~~ Street & Sepulveda? Lomita? or San Pedro would make sense

Additional Comments on the Draft Environmental Impact Report:

Food for thought. I lived in Minneapolis when the light rail was built from downtown to Mall of America at grade. It was very popular but the complaints from homes along the track about the noise level was so great, the MTC had to apply very expensive teflon grease to the rails to help keep the noise down.

As LA Metro evaluates the future of transit in the South Bay, share your thoughts on a future light rail route. Please complete the attached survey and mail it back, or take it online at tinyurl.com/CLineExt or by scanning the QR code

As a City of Torrance resident, I would like to share my opinion on what light rail route I would like in the South Bay. *(Check one or more boxes)*

☐ Proposed Project: Metro Right-of-Way Elevated/At-Grade ☐ Trench Option ☐ Hawthorne Option

P.S. People who ride on these light Rail's, Harass other people on the transit's - You need security to protect the other commenitors.

Additional Comments on the Draft Environmental Impact Report:

Torrance is a beautiful community. Please Do not put this transit in. You're Going to give the Drug dealers, Gangs, Prostitutes & Child-Molesters perverts DTNE [illegible] to your city

Dear Honorable Chair and Members of the L.A. Metro Board of Directors,

On behalf of the City of Torrance, I am writing to convey our official position and continued support for the Proposed Project: Right-of-Way with Elevated/At-Grade (ROW) Option as the Locally Preferred Alternative for the C-Line Extension to Torrance Project. On March 12, 2024, the Torrance City Council once again reaffirmed its long standing support for expanding light rail service to the South Bay and the ROW Option alignment.

The ROW Option utilizes the existing L.A. Metro Right-of-Way with a combination of elevated and at-grade segments. Additionally, it does not encroach on I-405 Freeway, avoids business, traffic and parking impacts on Hawthorne Boulevard and is the most cost-effective option as by Metro's own assessments it will be completed the fastest and save nearly $1 Billion in construction costs. Under the ROW Option, revenue generation and job creation in correlation to the C-Line Extension will boost economic activities in the region. The ROW Option would also deliver residents from the Cities of Redondo Beach, Lawndale, Torrance, and Hawthorne conveniently to the new LAX People Mover, future Inglewood Transit Connector, and the Metro E and K Lines.

The other route options (Elevated Hawthorne Boulevard and Trench Option) would require major construction in the area and will result in further delays for the project. The Elevated Hawthorne Boulevard option in particular will disrupt existing vehicle movements through the extended construction phase by reducing travels lanes in each direction. This will exacerbate existing congestion for more than 70,000 daily motorists. It will cause significant impacts to local businesses and the economy, including loss of parking, impacting businesses along Hawthorne Boulevard, and creating accessibility and connectivity issues to the Redondo Beach Transit Center. It will also create burdens on local businesses and remove upward of a million dollars in sales tax revenue annually for our City through both partial and complete Torrance Big Box retail and Auto Dealer operations property takings.

More than 1,000 Torrance residents and businesses have provided their support for the Right-of-Way with Elevated/At-Grade Option. The ROW options also received supports from City of Torrance's Planning and Traffic Commissioners, Torrance Auto Dealer Association, and Torrance

Area Chamber of Commerce. We urge you to join other local and regional leaders, residents, and businesses in support of bringing light rail to the South Bay via the route planned years ago along with investments made to integrate the extension of the existing C-Line via the Metro Right-of-Way Elevated/At-Grade Option. Additionally, LA Metro staff conducted a telephone poll in Spring of 2023 for the Cities of Lawndale, Redondo Beach, and Torrance. 67 percent of the respondents stated that they support the C-Line Extension Project. Within City of Torrance, 69 percent stated they support the project. During the DEIR comment period, 66 percent of the comments on alignment preference supported using the Right-of-Way (ROW) Elevated/At-Grade Option.

We understand and empathize for residents living along the ROW in our neighboring cities, as they have strong concerns about noise and vibrations, and pedestrian safety with the additional passenger light rail added to the existing ROW. However, given LA Metro's history of successfully building light rail, connecting communities, and mitigating noise and vibration in other communities like Culver City (E-Line) and Pasadena (A-Line), we urge that LA Metro staff and the Board continue to work with these communities impacted to address their concerns and mitigate the noise and vibration, as a result of the added passenger light rail.

For too long the South Bay region has waited for light rail investment. Please advance the only option that builds on completed right-of-way investment, minimizes commuter disruption and realizes both environmental and ridership access the soonest: The Right-of-Way with Elevated/At-Grade Option.

Thank you for your time and consideration.

Sincerely,

RE: Proposed Green Line Extension to Torrance

Dear Mr. Washington,

On behalf of the City of Torrance, I am writing to convey our official position on the four proposed alternatives for extending the Green Line to Torrance. After careful review and analysis of the four alternatives, the City of Torrance recommends the Metro Board proceed with a full project Environmental Impact Report (EIR) to study **Alternative 1.** This alternative is fully funded and provides the best opportunity for project acceleration and completion by 2028. Implementation of Alternative 1 will create opportunity for greater regional connectivity, economic growth and traffic mitigation for the South Bay and all of Los Angeles County.

If Alternative 1 is not selected, Torrance recommends **Alternative 3** as a secondary/compromise option. We are aware that Alternative 3 is not presently fully funded and will require additional capital investment in order to complete. However, this option maintains certain components of the infrastructure needed for potential growth and service enhancement in the region.

The future of public transportation and regional connectivity will be heavily impacted by the decisions made in the selection of one of these four alternatives. As you know, there is presently limited light rail service into the South Bay region of Los Angeles County. Hence, this crucial enhancement of the transportation system is essentially our one great opportunity to build the infrastructure needed for the next several decades and generations of residents living and working in the South Bay. Therefore, in our assessment, **Alternative 1** is the best alternative to address all needs, present and future, for the South Bay.

If you have any questions, or if there is anything that we can do to continue our collaboration and advocacy to strengthen and enhance public transportation in the region, please do not hesitate to contact Kim Turner, the Director of Torrance Transit at (310) 618-6245.

Sincerely,

[redacted]

March 3, 2021

Dolores Roybal Saltarelli, Project Manager
Los Angeles County Metropolitan Transportation Authority
One Gateway Plaza, Mail Stop 99-22-4
Los Angeles, CA 90012

RE: Metro C Line (Green) Extension to Torrance Project

Dear Ms. Roybal Saltarelli,

On behalf of the City of Torrance, I am writing to convey our official position on the two proposed alternatives for extending the Metro C Line to Torrance (Project), and to provide comments related to preparation of the Draft Environmental Impact Report (Draft EIR) for the Project.

The City of Torrance supports the intent of the Project to provide high frequency transit service through the South Bay that will serve the City of Torrance and other communities. The City of Torrance appreciates being notified of the Revised and Recirculated Notice of Preparation (NOP) and Comments and Scoping Meeting for the Project, and that an Environmental Impact Report will be prepared in compliance with the California Environmental Quality Act.

After careful review of the two alternatives, the City of Torrance continues to affirm its support of **Alternative 1**. This alternative utilizes an existing railroad right-of-way as the most cost-effective and efficient route to the future Torrance Regional Transit Center, which reduces the environmental footprint and is least impactful. It is also fully funded and provides the best opportunity for project acceleration and completion by 2028.

The City of Torrance strongly opposes the Alternative 2 alignment. Alternative 2 would cause significant negative impacts in Torrance, specifically to: aesthetics; air quality and greenhouse gas emissions; noise and vibration; public services; traffic and transportation; hazards and safety; and the local economy.

The City of Torrance recommends the Draft EIR consider for each Project alternative the following topics of environmental analysis:

Air Quality and Greenhouse Gas Emissions: Assess the potential air quality and greenhouse emissions impacts to residential zones and park recreation located east of the Metro right-of-way. Include the potential impacts to sensitive receptors including Torrance residential communities, public and private schools, childcare facilities, and City facilities within a half-mile radius.

Hazards and Safety: Assess the potential construction hazard and operating hazard impacts to sensitive receptors including Torrance residential communities, public and private schools, childcare facilities, and City facilities within a half-mile radius.

Hydrology and Water Quality: Assess the potential hydrology and water quality impacts to Pioneer Sump located adjacent to the Metro right-of-way.

Noise and Vibration: Assess the potential noise and vibration impacts to residential and commercial zones and park recreation located along the Metro right-of-way. Horn soundings, crossing gate bells, rail noise, and construction noise and vibration may create impacts for adjacent residents and businesses. Include the potential impacts to sensitive receptors including Torrance residential communities, public and private schools, childcare facilities, and City facilities within a half-mile radius. The residential communities near the Alternative 1 alignment are largely composed of duplexes, multifamily structures, planned developments, and manufactured homes. Include detailed maps showing the locations of any proposed sound walls along with elevation views for City review and comment. Develop a mitigation plan to reduce these impacts for City review and comment.

Public Services and Recreation: Assess the potential recreation impacts to park facilities at El Nido Park located adjacent to the Metro right-of-way. Include detailed maps showing the proposed alignment and any proposed removal of trees or impact to park facilities. Develop a mitigation plan to reduce these impacts for City review and comment.

Alternative 2: Hawthorne Boulevard

Aesthetics: Assess the potential aesthetic impacts to residential and commercial zones located along Hawthorne Boulevard. The equipment and power traction system to operate the light rail train has the potential of creating negative aesthetic impacts along Hawthorne Boulevard, especially to the residential zones located east and west of Hawthorne Boulevard. In addition, the poles and the overhead wiring system, along Hawthorne Boulevard will have an adverse impact to the aesthetic value of the commercial corridor. Several commercial properties and nearby residential properties could be significantly impacted where the alignment rejoins the Metro right-of-way near 190th Street. The elevated portion of Alternative 2 from 182nd Street to 190th Street would pose fewer physical conflicts with vehicles, bicycles and pedestrians but would require a very large supporting structure with abutments and support columns that would occupy much if not all of the planted center median width, which may cause a significant impacts to nearby residential properties from light casting downward and excess glare. The elevated portion may also cause shadow impacts at sunrise and sunset to nearby residential properties. In addition, assess the potential impacts from loss of (removal or trimming) significant trees and vegetation along Hawthorne Boulevard.

Air Quality and Greenhouse Gas Emissions: Assess the potential air quality and greenhouse gas emissions impacts resulting from construction along Hawthorne Boulevard. This alternative would be highly visible and would take a significant amount of time to complete, and a thorough analysis and plan should be included to reduce construction air quality and excess greenhouse gas emissions impacts along the commercial corridor. Include the potential impacts to sensitive receptors including Torrance residential communities, public and private schools, childcare facilities, and City facilities within a half-mile radius.

Hazards and Safety: Assess the potential construction hazard and operating hazard impacts to sensitive receptors including Torrance residential communities, public and private schools, childcare facilities, and City facilities within a half-mile radius. At-grade crossings are undesirable as a rule and new crossings are highly discouraged due to the safety risks they pose to the public regardless of the safety measures employed. Additionally, the frequent and recurrent blockage of traffic on Hawthorne Boulevard caused by the proposed train may increase vehicle congestion at the proposed crossings and could negatively impact response times for emergency vehicles.

Hydrology and Water Quality: Assess the potential hydrology and water quality impacts to Pioneer Sump located adjacent to the Metro right-of-way.

Noise and Vibration: Assess the potential noise and vibration impacts to residential and commercial zones located along Hawthorne Boulevard. Horn soundings, crossing gate bells, rail noise, and construction noise and vibration may create impacts for adjacent residents and businesses. Include the potential impacts to sensitive receptors including Torrance residential communities, public and private schools, childcare facilities, and City facilities within a half-mile radius. The residential communities near the Alternative 2 alignment are largely composed of single-family homes, duplexes, multifamily structures, planned developments, and manufactured homes. Include detailed maps showing the locations of any proposed sound walls along with elevation views for City review and comment. Develop a mitigation plan to reduce these impacts for City review and comment.

Land Use and Planning: Assess the potential impacts to existing residential and commercial land uses along Hawthorne Boulevard. An at-grade rail line in the median as proposed from 166th Street to 182nd Street may cause a significant physical disconnection of the residential neighborhoods located east and west of Hawthorne Boulevard. Physical disconnection may also be further contributed by the existing high power transmission lines located between 177th Street and 178th Street. The elevated portion of Alternative 2 from 182nd Street to 190th Street would pose fewer physical conflicts with vehicles, bicycles and pedestrians but would require a very large supporting structure with abutments and support columns that would occupy much if not all of the planted center median width, which may cause a significant physical disconnection of the El Nido neighborhood west of Hawthorne Boulevard from the rest of the City.

Transportation and Traffic: Assess the potential traffic impacts to Hawthorne Boulevard and to residential and commercial uses along the corridor. Hawthorne Boulevard is the busiest roadway in Torrance carrying in excess of 69,000 vehicles per day. Construction of the C Line at-grade would impact five signalized intersections and three unsignalized intersections along Hawthorne Boulevard from Redondo Beach Boulevard to 190th Street. An at-grade rail line in the median as proposed from 166th Street to 182nd Street would likely require either the elimination of left-turn lanes at several of these intersections or street widening that would push Hawthorne Boulevard traffic closer to adjacent residential and commercial uses. Restriction of turning movements onto or off of Hawthorne Boulevard may be required and would cause the diversion of traffic to other routes and cut-through traffic in residential neighborhoods. At-grade rail systems would require the installation of traffic signal pre-emption systems that would stop vehicular traffic with signals, bells, and gates as trains pass through. At-grade crossings are undesirable as a rule and new crossings are highly discouraged due to the safety risks they pose to the public regardless of the safety measures employed. The frequent and recurrent blockage of traffic by the proposed train would cause increased vehicle congestion at the proposed crossings and would negatively impact response times for emergency vehicles. Additionally, the distance between the Alternative 2 alignment and the Redondo Beach Transit Center should be evaluated for connectivity and efficiency between transit systems. The approximate three-quarter mile distance between the two would reduce effectiveness to an efficient multi-modal outcome and not convenient for future users that have physical mobility limitations.

the installation of traffic signal pre-emption systems that would stop vehicular traffic with signals, bells, and gates as trains pass through. At-grade crossings are undesirable as a rule and new crossings are highly discouraged due to the safety risks they pose to the public regardless of the safety measures employed. The frequent and recurrent blockage of traffic by the proposed train would cause increased vehicle congestion at the proposed crossings and would negatively impact response times for emergency vehicles. Additionally, the distance between the Alternative 2 alignment and the Redondo Beach Transit Center should be evaluated for connectivity and efficiency between transit systems. The approximate three-quarter mile distance between the two would reduce effectiveness to an efficient multi-modal outcome and not convenient for future users that have physical mobility limitations.

Economic Impact: Assess the potential economic impacts to businesses located along the Hawthorne Boulevard commercial corridor that may occur with Alternative 2 both during construction due to reduced access or traffic detours, and after construction. Include an assessment of tax base for the City of Torrance during and after construction resulting from Alternative 2. Include the potential loss of existing commercial operations located on commercial and industrial properties and the impact to nearby residential properties where the alignment would rejoin the Metro right-of-way near 190th Street.

Finally, the environmental analysis for each Project alternative should assess the potential demand increase to the Torrance Regional Transit Center and need for additional parking resulting from introduction of the new mode of transit. The Draft EIR should include analysis for constructing a multilevel parking structure up to 1,500 vehicles at the Torrance Regional Transit Center to accommodate increased ridership along the C Line and connecting transit systems. The extension of the Line C to Torrance requires a 3% local match contribution, which is provided by the construction of the Torrance Regional Transit Center via South Bay Measure R Highway Program funds in the amount of $25.7 Million.

The City of Torrance has many mechanisms at its disposal to reach individual homeowners, business owners, homeowner associations, and business associations. It is strongly recommended that all stakeholders in the City be reached and engaged, particularly those that live near to where the Project alternatives are proposed.

The future of public transportation and regional connectivity will be heavily impacted by the decisions made in the selection of one of these two alternatives. There is presently limited light rail service into the South Bay region of Los Angeles County, and this crucial enhancement of the transportation system is a great opportunity to building the infrastructure needed for the next generation of residents living and working in the South Bay. Therefore, the City of Torrance continues to affirm its support of **Alternative 1** as the best alternative to address all needs, present and future, for the South Bay.

If there are any questions, of if there is anything the City of Torrance can do to continue our collaboration and advocacy to the strengthen and enhance public transportation in the region, please do not hesitate to contact Kim Turner, the Director of Torrance Transit, at (310) 618-6245.

Sincerely,

[redacted]

Los Angeles, CA 90012-2952

Re: Metro South Bay C-Line Extension to Torrance Regional Transit Center

Honorable Ara J. Najarian and the Esteemed Members of the Board:

On behalf of the City of Torrance, I am writing to convey our official position and continued support for the C-Line Extension to Torrance using the existing L.A. Metro Railroad Right-of-Way (ROW) Alternative. This alignment provides the best opportunity for project acceleration and completion by the 2028 Olympics hosted in Los Angeles. Implementation of the ROW alignment will create opportunity for greater regional connectivity, economic growth, and traffic mitigation for the South Bay and all of Los Angeles County. Project completion and operation to support the 2028 Olympics should be of utmost priority with respect to the project schedule.

As Metro conducts its Public Scoping Meetings and engages the public throughout the process for the Draft Environment Impact Report (EIR) for the C-Line Extension, city staff reviewed the proposed alternatives and attended the neighborhood walks and community meetings to better understand the impacts of the two alignments. The Right-of-Way Alignment, which allows the new rail line to continue safely along the existing right of way to the Mary K. Giordano Regional Transit Center, should be the locally preferred alternative. This alternative also creates the least impacts to residents and businesses within the City of Torrance.

Initially, our governing board considered proposing a 4th option in which the train would be fully underground (e.g. – a subway). However, after speaking with L.A. Metro staff at our Council Meeting on October 25, 2022, we confirmed this option was not cost effective and had not been selected by the Metro Board for moving forward into the Draft Environmental Impact Report back in 2018. Furthermore, Metro staff stated that the fully underground option would most likely not allow this project to be expedited for the completion before the 2028 Olympics.

Additionally, the City of Torrance is requesting that the Metro Board and LA Metro staff consider our concerns and the following suggestions as the project proceeds with its environmental impact assessment.

ROW Alignment is City of Torrance's preferred alternative as it has better chance of completion by the 2028 Summer Olympics in Los Angeles

The ROW alignment was initially fully funded under the Measure R and Measure M, which were a half-cent sales tax approved by the voters in 2008 and 2016. In addition, the ROW Alignment would create the least amount of impacts in terms of traffic congestion for residents of Torrance and displacement of our businesses as compared to the elevated Hawthorne Blvd. Alignment. With the 2028 Summer Olympics scheduled to take place in Los Angeles, having the project completed on time using the ROW means that Torrance and South Bay residents can take the new rail line to all of the sporting events. It will also alleviate major traffic congestion for cities along the 405 Freeway. According to Metro Staff, the projected ridership to and from Torrance for the C-Line Extension is higher than the projected ridership for other cities.

The ROW Alignment can potentially create more benefits to the surrounding communities than the Elevated Hawthorne Alignment

ROW Alignment would potentially provide improved mobility and minimize environmental impacts compared to the Hawthorne Blvd. alignment. Based on Metro staff's assessment of performance and project goals as part of the Supplemental Alternative Analysis submitted to the Metro Board on September 19, 2018, ROW alternative will perform better in the areas of Improved Mobility, Cost Effectiveness and Financial Feasibility, and Travel Time compared to the other alternatives.

Currently, the existing freight tracks do not have safety barriers surrounding them. Metro staff mentioned that the ROW alignment will include looking at adding barriers to prevent pedestrian/rail interactions/accidents.

Pasadena, Santa Monica, and some of the surrounding communities to the Metro L and E Lines have experienced increase in property values. In a 2013 study conducted by Center for Neighborhood Technology, commissioned by American Public Transportation Association, and in partnership with National Association of Realtors, researchers found that areas within frequent transit service outperformed others as a whole by 41.6 percent. Additionally, neighborhoods near transit had an effect on the resilience of property values, which benefited more from transit that was well connected and had a higher frequency of service. Households living in these areas had better access to jobs and lower average transportation costs than the region as a whole.

The Elevated Hawthorne Blvd. Alignment will cause major impacts to Torrance residents and businesses along this Corridor

The second alignment is to build an elevated railway along Hawthorne Boulevard. This will affect many businesses in the City of Torrance, including the Volvo Cars South Bay Dealership located on Hawthorne Blvd. and 190th Street. Other businesses and residents along Hawthorne Blvd. in Torrance will have to live with seeing an elevated train and columns adjacent to their homes. The Hawthorne alignment will have negative impacts to their current way of life as there is no existing rail line going through the area. Other concerns from the Torrance community include noise and

vibration, visual aesthetics and an increase in traffic on Hawthorne Boulevard. Moreover, Metro staff should also include costs and delays potentially caused by encroachment along the 405 Freeway and on Hawthorne Boulevard in their analysis. The Elevated Hawthorne Boulevard Alignment may also require travel lane and/or turn pocket modifications in the City of Torrance. Last but not least, Metro staff should consider the effects of the elevated train structure casting a shadow on business and homes within the affected corridors.

In contrast, the ROW alignment will utilize most of the existing right-of-way currently owned by L.A. Metro. Additionally, Metro is planning to study and provide sound barriers to alleviate not only the low noise from the new light rail, but also to help alleviate the noise from the existing freight rail for the surrounding communities. Furthermore, Metro staff mentioned at the April 2022 Neighborhood Walks that they will work with BNSF Railway to upgrade and replace some of the older existing freight tracks as part of the construction process. This will further reduce the noise level coming from the existing freight rail.

Again, we strongly support the Right-of-Way Alignment and oppose the Elevated Hawthorne Boulevard Alignment. If you have any questions or concerns, please contact our Transit Director, Kim Turner at (310) 618-6245 or KTurner@TorranceCA.Gov. Thank you for your consideration.

Sincerely,

George K. Chen
Mayor
City of Torrance

Mark Dierking, Metro

CITY OF
TORRANCE

GEORGE K. CHEN
MAYOR

March 15, 2023

Honorable Chair Ara J. Najarian
Los Angeles County Metropolitan Transportation Authority
Board of Directors
1 Gateway Plaza, Mail Stop 99-3-1
Los Angeles, CA 90012

Dear Chair Najarian,

As L.A. Metro prepares to bring light rail to the South Bay via an extension of the existing C-Line (formerly "Green Line") and studies the three options, we write to encourage you to support the Proposed Project: Right-of-Way with Elevated/At-Grade Option.

The Right-of-Way with Elevated/At-Grade Option utilizes existing L.A. Metro Right-of-Way with a combination of elevated and at-grade segments and is the most cost-effective route, leveraging existing transit investments in the Mary K. Giordano Regional Transit Center and the Redondo Beach Transit Center. Additionally, it does not encroach on I-405, avoids businesses, traffic and parking impacts on Hawthorne Blvd.

Los Angeles drivers are estimated to spend an average of approximately 95 hours in traffic, costing $1,600 per driver annually. The light rail extension to the South Bay will bring numerous benefits to our region, including an alternate mode of transportation for those traveling along the I-405 corridor, save passenger commute times and alleviate traffic on roadways. The extension will also provide vastly improved access to regional destinations, connections to the greater L.A. Metro regional rail system and reductions in air pollution and greenhouse gas emissions by about 2,369 metric tons of C02 annually.

Additionally, the C-Line extension is estimated to serve 65,000 jobs in the project area by 2042, with most riders traveling to and from Torrance in addition to surrounding cities, such as Redondo Beach, Gardena, Carson, and Long Beach. It is also projected to generate between 10,300 – 16,200 new daily transit trips and improves equity by serving 18% of the low-income and 47% of the minority populations in the project area.

The other route options for Light Rail on Metro's Rail Right-of-Way/Trench and Elevated Light Rail along Hawthorne Blvd. would require major construction in the area and result in further delays for the project. The Elevated Hawthorne Blvd. option is inconsistent with voter-approved funding initiatives. It will cause significant impacts to local businesses and the economy, including loss of parking, impacting businesses along Hawthorne Blvd., and creating accessibility and connectivity issues to the Redondo Beach Transit Center.

For too long the South Bay region has waited for this light rail investment. Please advance the only option that builds on a completed right-of-way capital investment, minimizes commuter disruption and realizes both environmental and ridership access the soonest: **The Right-of-Way with Elevated/At-Grade Option**. The Torrance City Council supports bringing light rail to the South Bay via the route planned years ago along with investments made to integrate the extension of the existing C-Line via the Metro Right-of-Way Elevated/At-Grade Option. This is the only option with the opportunity to complete by LA28 if given the focus, funding, and support of not only the county, but the entire nation. Thank you for your time and consideration.

Sincerely,

[redacted]

George K. Chen
Mayor
City of Torrance

March 27, 2023

Sent via E-Copy and USPS First Class Mail

Georgia Sheridan, Project Manager
Los Angeles County Metropolitan Authority
One Gateway Plaza, Mail Stop: 99-22-3
Los Angeles, CA 90012

Dear Ms. Sheridan:

RE: Metro C-Line (Green) Extension to Torrance (DEIR)

Thank you for including the City of Torrance in the notification list for the proposed C-Line Extension to Torrance Draft Environmental Impact Report (DEIR). The City of Torrance has reviewed the DEIR and has the following comments:

- **Page 2-20: Figure 2.3-13:** The North arrow is incorrectly oriented with respect to true north and the centerline of Crenshaw Blvd. Also, please verify orientations in Figure 2.3-14 on Page 2-21 if a change is made on Page 2-20.

- **Page 2-36: New South Bay Galleria Station Mid-Block Crossing:** Torrance STRONGLY opposes any new pedestrian crossing on Hawthorne Blvd related to the South Bay Galleria Station due to multiple concerns and the absence of a Traffic Study. The proposed mid-block crossing is located only 360 feet south of the existing traffic signal at the Hawthorne Blvd/Artesia Blvd intersection and an undisclosed close distance not provided in the DEIR north of the signalized Hawthorne Blvd/177th St intersection. This proposal should be analyzed further in a Traffic Study to identify potential negative impacts to traffic circulation; traffic delay; LOS impacts at the Hawthorne Blvd/Artesia Blvd intersection and the Hawthorne Blvd/177th St intersection; and safety and other impacts. The Hawthorne Blvd/Artesia Blvd intersection served an average daily traffic (ADT) of 61,000 vehicles in 2017. The ADT has likely increased to 64,000. An additional signal for a Mid-block crossing in close proximity to other signalized intersections will likely have overall negative impacts, even with the implementation of programmed signal coordination.

  Furthermore, the Traffic Study should also analyze the potential impacts to Torrance's adjacent residential streets (i.e. 175th Place, W. 176th Street, 177th Street) and privately-owned parking lots on the east side of Hawthorne Blvd, south of Artesia Blvd. It is very likely that a proposed signalized Mid-block crossing will introduce new vehicle traffic and also increase on-street parking demand on these residential streets and in the private parking lots for those wishing to enter the South Bay Galleria Station platform

from the east side of Hawthorne Blvd. This is because there is no proposed designated parking area in Torrance for the South Bay Galleria Station. Also, these residential streets and private parking lots are geographically convenient for non-Torrance residents that will use the South Bay Galleria Station versus the parking areas designated for the Redondo Beach Transit Center and/or other available parking areas on the west side of Hawthorne Blvd. The daily intrusion of non-residents, related to the C-Line usage, parking in a residential area would reduce on-street parking availability for Torrance residents; negatively impact quality of life for Torrance residents; and require the City of Torrance to mitigate the impacts imposed on its residents. The daily intrusion of non-residents into a private parking lot would reduce parking for business patrons and could have negative economic impacts to Torrance businesses.

An option to consider is to construct a pedestrian bridge over southbound Hawthorne Blvd with access only from the west side of Hawthorne Blvd to/from the South Bay Galleria Station platform. Access from the east side would be provided at the Hawthorne Blvd/Artesia Blvd intersection, a close walking distance of only 360 feet further for Torrance residents residing on residential streets on the east side of Hawthorne This option would: eliminate the need for a new traffic signal; reduce/eliminate parking impacts to adjacent residential streets and private parking lots in Torrance; and allow for a functional, designated parking area on the west side of Hawthorne Blvd.

- **Page 2-36: 177th Street:** The proposed elimination of one of the two northbound left-turn lanes should be analyzed further in a Traffic Study to determine potential negative impacts. No data is provided to indicate a decrease in the northbound left-turn movement volume and, therefore, this lane reduction would require an increase to the GREEN time for this protected left-turn movement in order to accommodate the same northbound left-turn volume in one left-turn lane versus two. Without the increase in GREEN time, left-turning vehicles will queue into the #1 northbound through lane, thereby blocking one through lane. This would result in vehicle delay; vehicle idling; driver frustration; and cause the potential for increased rear end and side swipe collisions. Conversely, the increase in left-turn GREEN time will increase delays for other intersection approaches. The Traffic Study should obtain the existing left-turn movement volume; calculate the projected left-turn movement volume; calculate the actual length needed for the longer single left-turn lane; analyze and design new traffic signal timing; calculate a post-project intersection LOS and the LOS at other affected intersections north and south of 177th St.

- **Page 2-36: 179th Street:** The proposed new traffic signal should be analyzed further in a Traffic Study to identify potential negative impacts to traffic circulation; traffic delay; LOS determination; and safety and other impacts, including diversion of traffic onto 179th Street due to the proposed new traffic signal. A signal warrant analysis should be included. Additionally, it is not specified if you are proposing to extend the northbound or southbound left-turn lane.

- **Page 2-36: 180th Street:** The proposed median gap closure should be analyzed further in a Traffic Study to identify potential negative impacts to traffic circulation, including diversion of traffic onto 179th Street due to the proposed median closure.

- **Page 2-39: South Bay Galleria Station:** Torrance STRONGLY opposes any new pedestrian crossing in Hawthorne Blvd related to the South Bay Galleria Station. Instead, consideration should be given to constructing a pedestrian bridge overcrossing. See previous comment for Page 2-36: New South Bay Galleria Station Mid-Block Crossing.

- **Page 2-40:** Figure 2.3-29 should be revised to indicate the proposed new crosswalks are signalized and also include distances to Artesia Blvd (signalized) and 177th St (signalized).

- **Pages 2-54 and 2-55:** Consider including a row at the bottom of each Table to list the total duration in months and total daily truck loads for the Proposed Project and each Option.

- **Page 2-55: Table 2.4-3 Hawthorne Option Construction Schedule:** For the "LRT Guideway Bridges" phase it lists a duration of 35 months for 278,700 CY of soil import/export. Please verify if the duration is accurate. This is only 10 months (40%) longer than the duration of the similar phase shown on Page 2-54 in Table 2.4-1 Proposed Project-Construction Schedule of 25 months for 66,500 CY of soil import/export. Yet, the volume of soil import/export is more than 4 times (400%) greater.

- **Page 2-58:** Consider adding a projected schedule for permitting with State agencies. It is expected that the permit process will be longer for the Hawthorne Blvd option, when compared to the Projected Project and/or Trench option.

- **Page 3-4 Table 3.0-1:** The Map #1 project in Torrance is significantly complete and status should be changed to "Construction".

- **Page 3.1-1: Federal Regulations: American with Disabilities Act:** Bicycling and Walking: Hawthorne option would create over half a mile walk through dense parking lots of the South Bay Galleria in order for people to connect between buses and train from new train station on Hawthorne to the new Redondo Beach Transit Center. This could potentially create more issues for those who have mobility challenge to be able to connect between buses and train.

- **Page 3.1-3: Senate Bill 743, Transportation Impacts:** Although SB 743 requires the use of Vehicle Miles Traveled to evaluate traffic impacts, local agencies can require that traffic circulation enhancements be constructed to improve traffic conditions that would otherwise be worsened by a proposed project.

- **Page 3.1-47: Bicycling and Walking:** Hawthorne option would create over half a mile walk through dense parking lots of the South Bay Galleria in order for people to connect between buses and train from new train station on Hawthorne to the new Redondo Beach Transit Center. This could potentially create more issues for those who have mobility challenges to be able to connect between buses and train.

- **Page 3.1-15: PF-T-1 CTMP:** It appears the CTMP will be developed and prepared by contractors during the construction phase. The CTMP review, revision and approval process by each local agency should be considered in either the permitting schedule, if added, or as part of early activity during construction. See previous comments for Pages 2-54, 2-55 and 2-58.

- **Page 3.1-21: Torrance TC Station (Proposed Project)** – This section should say (All Options) as they all will end at the Torrance TC Station.

- **Page 3.1-38: South Bay Galleria Station (Hawthorne Option):** The prior history of various collisions from 2014 through 2018 is a concern that further supports strong consideration be given to constructing a pedestrian bridge overcrossing instead of a new pedestrian crossing in Hawthorne Blvd. See previous comment for Page 2-39.

- **Pages 3.1-54 and 3.1-55: South Bay Galleria Station Mid-Block Crossing:** Torrance STRONGLY opposes any new pedestrian crossing in Hawthorne Blvd related to the South Bay Galleria Station. Instead, consideration should be given to constructing a pedestrian bridge overcrossing. See previous comment for Page 2-36: New South Bay Galleria Station Mid-Block Crossing.

- **Page 3.1-55: 179th Street:** The proposed new traffic signal should be analyzed further in a Traffic Study. See previous comment for Page 2-36 179th Street.

- **Page 3.1-56: South Bay Galleria Driveway:** See previous comment for Page 2-36: New South Bay Galleria Station Mid-Block Crossing.

- **Page 3.1-57: 177th Street:** See previous comment for Page 2-36: 177th Street.

- **Page 3.1-57: 179th Street:** See previous comment for Page 2-36: 179th Street.

- **Page 3.1-57: 180th Street:** See previous comment for Page 2-36: 180th Street.

- **Page 3.1-57: 186th Street:** The realignment of the northbound left turn lane should be designed to provide the maximum possible clearance/separation between the northbound left-turn lane and southbound #1 travel lane. Subsequently, it is recommended that double-double yellow pavement markings be used for lane separation instead of flexible vertical delineators due to the anticipated problematic maintenance needs of frequently having to replace missing or damaged delineators.

- **P3.2-5:** Zoning code was last updated on January 1, 2023 (ADU Code Updates).

- **P3.2-6:** Description of Hawthorne Boulevard Corridor Specific Plan (HBCSP) should also describe intent and purpose of HBCSP is to guide actions within the area so that businesses can continue to prosper and the City of Torrance can continue to enjoy a healthy retail tax base. Furthermore, the design concept envisioned for the North Torrance District is that of a northern gateway to the City and the City's most prominent commercial boulevard, providing an active, community oriented, commercial environment. The "Hawthorne" option requires additional analysis on potential significant impacts to Land Use and the adopted plan based on design guidelines and intent for the North Torrance Sub District.

- **3.2-13: Torrance TC Station:** The Mary K. Giordano Regional Transit Center (operated under Torrance Transit System) will have 250 surface parking spaces along with 1,000-space parking structure that is currently under the design phase. The parking structure project will have 4 levels, up to 1,000 stalls, and electric vehicle charging stations.

- **P3.2-21:** Zoning along Hawthorne Boulevard along City of Torrance is predominantly single-family residential along the east side of Hawthorne Boulevard between Redondo Beach Boulevard on the north and 180th Street to the south; Commercial uses, including vehicle dealerships, restaurants, auto related businesses, between 180th and 190th Streets, with a mobile home residential community along the west side of Hawthorne Boulevard between 186th Street and along the Proposed Project rail line; uses industrial uses near the terminus of the TC. Description of land uses should reflect path of extension to the south.

- **P3.2-23:** Assumptions of Hawthorne option construction should take into consideration years and not months due to oversight and review from additional agencies.

- **P3.2-26:** Include HBCSP in table 3.2-5 in addition to General Plan (GP) as it is a local land use policy.

- **P3.3-117:** Analyze shadows casting on adjacent properties on Hawthorne Boulevard Option and include proposed soundwalls.

- **P3.3-120:** 3.3-7.3 Hawthorne Option – Aesthetics of additional infrastructure should be considered as degradation of views and cumulative impacts should be taken into account.

- **P3.4-30:** Sensitive receptors section did not take into account Excelsior Preschool located at 19801 Mariner Avenue (Figure 3.4-4).

- **P3.7-28: Section 3.7-4.1.2 Operational Impacts:** Operational Impacts were determined to be "Less than Significant Impact with Mitigation" with respect to the Centromadia parryi ssp. Australis (Common name Southern Tarplant), a 1B.1 Status Plant, at the Torrance Tarplant Preserve parcel (LA County Assessor Parcel # 7352-002-914).

- Unfortunately, the proposed mitigation measures do not assess the impact of the reduced watershed following the 12'-5" to 12'-7" (Appendix-2A: RW-120 & RW-121) expansion of the right-of-way via easements into the subject 2-acre parcel that is cited in the DEIR. The viability of the stated 3 to 1 replacement ratio goal set by the City's planned implementation of the Torrance Tarplant Preserve (Mitigation Measure BIO-1; Adopted Mitigated Negative Declaration (EAS13-00002, SCH#2014121003) may be impacted by the reduced watershed.

- **Page 4-25: High-Frequency Bus Alternative:** This section should also mention that the proposed High-Frequency Bus (HFB) Alternative would create duplication of service for Torrance Line 8. The HFB Alternative would also require a transfer at the Redondo Beach (Marine) Station in order for riders to continue further. This increases travel time and delays and becomes less attractive options compared to light rail.

- **MM VIB -1:** Require noticing of surrounding businesses near Del Amo Bridge regarding pile driving activities at least 72hrs in advance, in coordination with the City of Torrance Public Works Department, due to Significant and Unavoidable Impact.

- **MM-NOI2:** Information on proposed soundwalls is vague. Additional detail is required on heights and potential impacts to surrounding uses due to shade.

- **MM-BIO2:** Please Include El Nido Park for nesting bird surveys.

- **P3.10-21: Fig3.10-2:** Amie Sump identified instead of Pioneer Sump.

- **P3.15-22: Figure 3.15-4**: Educational Facilities map is missing Excelsior Preschool located at 19801 Mariner Avenue.

- **P3.15:** Public Services - Ensure coordination with TPD/TFD on construction detours.

- **Pages 4-49 Table 4.5-1 Comparison of Alternatives:** Torrance supports the Proposed Project in the Metro R.O.W. and opposes the Trench Option and the Hawthorne Option. Table 4.5-1 clearly reveals that impacts resulting from the Trench Option and the Hawthorne Option DO NOT avoid and DO NOT substantially lessen the significant majority of the significant effects of the project, when compared to the Proposed Project impacts.

- **Appendix 2-A, Drawing RW-763:** depicts the Hawthorne Option right of way expansions for both additional right-of-way acquisition and permanent easement requirements. The Hawthorne option would result in full and partial takings for at least two parcels, parcels 4084-024-086 and 4084-024-4026 respectively. In addition, significant economic disruptions would result in two commercial operations immediately north that include two regional car dealer operations, parcels 4084-024-023 and 4084-024-063. The four parcels represent an annual sales, property and business license tax revenues for the City that exceed $1.04 million. In an ever increasing environment, where additional pressure is being placed on local agencies, the economic impact of the Hawthorne Option would lessen the City of Torrance's ability to provide and maintain existing levels of service.

As previously indicated in a letter dated March 3, 2021 to Dolores Roybal Saltarelli for the preparation of the DEIR, the City of Torrance continues to support the Proposed Project and strongly opposes the Trench and Hawthorne Alternatives due to additional time required, additional costs, and negative economic impacts to commercial businesses along Hawthorne Boulevard during construction and operation of the LRT. The Proposed Project would commence in spring 2027 and be completed in approximately 5 years, while the Trench Option would commence in spring 2027 and require 8 years to build and the Hawthorne Option would not commence until 2029 and take 6 years to build. Furthermore, the Trench Option is projected to cost approximately $900M more than the Proposed Project and the Hawthorne Option is projected to cost approximately $1 Billion more than the Proposed Project. While CEQA does not require consideration of cost differences between alternatives, it is important to note that neither Option is an alternative that avoids or substantially lessens the significant majority of project impacts. The $900M to $1 Billion should be re-directed to fund other eligible critical projects in the South Bay area, and/or be used to address potential environmental impacts related to other eligible projects in the South Bay area.

The City of Torrance appreciates the opportunity to comment and looks forward to the incorporation of these comments into the analysis when completed. We have enclosed a copy of letters from Torrance related to this matter. Should Metro need to contact the City of Torrance please do not hesitate to contact the Community Development Department at 310.618.5990.

Sincerely,

ARAM CHAPARYAN
CITY MANAGER

Attn: Mr. Phillip A. Washington, CEO/General Manager

RE: Proposed Green Line Extension to Torrance

Dear Mr. Washington,

On behalf of the City of Torrance, I am writing to convey our official position on the four proposed alternatives for extending the Green Line to Torrance. After careful review and analysis of the four alternatives, the City of Torrance recommends the Metro Board proceed with a full project Environmental Impact Report (EIR) to study **Alternative 1.** This alternative is fully funded and provides the best opportunity for project acceleration and completion by 2028. Implementation of Alternative 1 will create opportunity for greater regional connectivity, economic growth and traffic mitigation for the South Bay and all of Los Angeles County.

If Alternative 1 is not selected, Torrance recommends **Alternative 3** as a secondary/compromise option. We are aware that Alternative 3 is not presently fully funded and will require additional capital investment in order to complete. However, this option maintains certain components of the infrastructure needed for potential growth and service enhancement in the region.

The future of public transportation and regional connectivity will be heavily impacted by the decisions made in the selection of one of these four alternatives. As you know, there is presently limited light rail service into the South Bay region of Los Angeles County. Hence, this crucial enhancement of the transportation system is essentially our one great opportunity to build the infrastructure needed for the next several decades and generations of residents living and working in the South Bay. Therefore, in our assessment, **Alternative 1** is the best alternative to address all needs, present and future, for the South Bay.

If you have any questions, or if there is anything that we can do to continue our collaboration and advocacy to strengthen and enhance public transportation in the region, please do not hesitate to contact Kim Turner, the Director of Torrance Transit at (310) 618-6245.

Sincerely,

[redacted]

Los Angeles, CA 90012

RE: Metro C Line (Green) Extension to Torrance Project

Dear Ms. Roybal Saltarelli,

On behalf of the City of Torrance, I am writing to convey our official position on the two proposed alternatives for extending the Metro C Line to Torrance (Project), and to provide comments related to preparation of the Draft Environmental Impact Report (Draft EIR) for the Project.

The City of Torrance supports the intent of the Project to provide high frequency transit service through the South Bay that will serve the City of Torrance and other communities. The City of Torrance appreciates being notified of the Revised and Recirculated Notice of Preparation (NOP) and Comments and Scoping Meeting for the Project, and that an Environmental Impact Report will be prepared in compliance with the California Environmental Quality Act.

After careful review of the two alternatives, the City of Torrance continues to affirm its support of **Alternative 1**. This alternative utilizes an existing railroad right-of-way as the most cost-effective and efficient route to the future Torrance Regional Transit Center, which reduces the environmental footprint and is least impactful. It is also fully funded and provides the best opportunity for project acceleration and completion by 2028.

The City of Torrance strongly opposes the Alternative 2 alignment. Alternative 2 would cause significant negative impacts in Torrance, specifically to: aesthetics; air quality and greenhouse gas emissions; noise and vibration; public services; traffic and transportation; hazards and safety; and the local economy.

The City of Torrance recommends the Draft EIR consider for each Project alternative the following topics of environmental analysis:

Air Quality and Greenhouse Gas Emissions: Assess the potential air quality and greenhouse emissions impacts to residential zones and park recreation located east of the Metro right-of-way. Include the potential impacts to sensitive receptors including Torrance residential communities, public and private schools, childcare facilities, and City facilities within a half-mile radius.

Hazards and Safety: Assess the potential construction hazard and operating hazard impacts to sensitive receptors including Torrance residential communities, public and private schools, childcare facilities, and City facilities within a half-mile radius.

Hydrology and Water Quality: Assess the potential hydrology and water quality impacts to Pioneer Sump located adjacent to the Metro right-of-way.

Noise and Vibration: Assess the potential noise and vibration impacts to residential and commercial zones and park recreation located along the Metro right-of-way. Horn soundings, crossing gate bells, rail noise, and construction noise and vibration may create impacts for adjacent residents and businesses. Include the potential impacts to sensitive receptors including Torrance residential communities, public and private schools, childcare facilities, and City facilities within a half-mile radius. The residential communities near the Alternative 1 alignment are largely composed of duplexes, multifamily structures, planned developments, and manufactured homes. Include detailed maps showing the locations of any proposed sound walls along with elevation views for City review and comment. Develop a mitigation plan to reduce these impacts for City review and comment.

Public Services and Recreation: Assess the potential recreation impacts to park facilities at El Nido Park located adjacent to the Metro right-of-way. Include detailed maps showing the proposed alignment and any proposed removal of trees or impact to park facilities. Develop a mitigation plan to reduce these impacts for City review and comment.

Alternative 2: Hawthorne Boulevard

Aesthetics: Assess the potential aesthetic impacts to residential and commercial zones located along Hawthorne Boulevard. The equipment and power traction system to operate the light rail train has the potential of creating negative aesthetic impacts along Hawthorne Boulevard, especially to the residential zones located east and west of Hawthorne Boulevard. In addition, the poles and the overhead wiring system, along Hawthorne Boulevard will have an adverse impact to the aesthetic value of the commercial corridor. Several commercial properties and nearby residential properties could be significantly impacted where the alignment rejoins the Metro right-of-way near 190th Street. The elevated portion of Alternative 2 from 182nd Street to 190th Street would pose fewer physical conflicts with vehicles, bicycles and pedestrians but would require a very large supporting structure with abutments and support columns that would occupy much if not all of the planted center median width, which may cause a significant impacts to nearby residential properties from light casting downward and excess glare. The elevated portion may also cause shadow impacts at sunrise and sunset to nearby residential properties. In addition, assess the potential impacts from loss of (removal or trimming) significant trees and vegetation along Hawthorne Boulevard.

Air Quality and Greenhouse Gas Emissions: Assess the potential air quality and greenhouse gas emissions impacts resulting from construction along Hawthorne Boulevard. This alternative would be highly visible and would take a significant amount of time to complete, and a thorough analysis and plan should be included to reduce construction air quality and excess greenhouse gas emissions impacts along the commercial corridor. Include the potential impacts to sensitive receptors including Torrance residential communities, public and private schools, childcare facilities, and City facilities within a half-mile radius.

Hazards and Safety: Assess the potential construction hazard and operating hazard impacts to sensitive receptors including Torrance residential communities, public and private schools, childcare facilities, and City facilities within a half-mile radius. At-grade crossings are undesirable as a rule and new crossings are highly discouraged due to the safety risks they pose to the public regardless of the safety measures employed. Additionally, the frequent and recurrent blockage of traffic on Hawthorne Boulevard caused by the proposed train may increase vehicle congestion at the proposed crossings and could negatively impact response times for emergency vehicles.

Hydrology and Water Quality: Assess the potential hydrology and water quality impacts to Pioneer Sump located adjacent to the Metro right-of-way.

Noise and Vibration: Assess the potential noise and vibration impacts to residential and commercial zones located along Hawthorne Boulevard. Horn soundings, crossing gate bells, rail noise, and construction noise and vibration may create impacts for adjacent residents and businesses. Include the potential impacts to sensitive receptors including Torrance residential communities, public and private schools, childcare facilities, and City facilities within a half-mile radius. The residential communities near the Alternative 2 alignment are largely composed of single-family homes, duplexes, multifamily structures, planned developments, and manufactured homes. Include detailed maps showing the locations of any proposed sound walls along with elevation views for City review and comment. Develop a mitigation plan to reduce these impacts for City review and comment.

Land Use and Planning: Assess the potential impacts to existing residential and commercial land uses along Hawthorne Boulevard. An at-grade rail line in the median as proposed from 166th Street to 182nd Street may cause a significant physical disconnection of the residential neighborhoods located east and west of Hawthorne Boulevard. Physical disconnection may also be further contributed by the existing high power transmission lines located between 177th Street and 178th Street. The elevated portion of Alternative 2 from 182nd Street to 190th Street would pose fewer physical conflicts with vehicles, bicycles and pedestrians but would require a very large supporting structure with abutments and support columns that would occupy much if not all of the planted center median width, which may cause a significant physical disconnection of the El Nido neighborhood west of Hawthorne Boulevard from the rest of the City.

Transportation and Traffic: Assess the potential traffic impacts to Hawthorne Boulevard and to residential and commercial uses along the corridor. Hawthorne Boulevard is the busiest roadway in Torrance carrying in excess of 69,000 vehicles per day. Construction of the C Line at-grade would impact five signalized intersections and three unsignalized intersections along Hawthorne Boulevard from Redondo Beach Boulevard to 190th Street. An at-grade rail line in the median as proposed from 166th Street to 182nd Street would likely require either the elimination of left-turn lanes at several of these intersections or street widening that would push Hawthorne Boulevard traffic closer to adjacent residential and commercial uses. Restriction of turning movements onto or off of Hawthorne Boulevard may be required and would cause the diversion of traffic to other routes and cut-through traffic in residential neighborhoods. At-grade rail systems would require the installation of traffic signal pre-emption systems that would stop vehicular traffic with signals, bells, and gates as trains pass through. At-grade crossings are undesirable as a rule and new crossings are highly discouraged due to the safety risks they pose to the public regardless of the safety measures employed. The frequent and recurrent blockage of traffic by the proposed train would cause increased vehicle congestion at the proposed crossings and would negatively impact response times for emergency vehicles. Additionally, the distance between the Alternative 2 alignment and the Redondo Beach Transit Center should be evaluated for connectivity and efficiency between transit systems. The approximate three-quarter mile distance between the two would reduce effectiveness to an efficient multi-modal outcome and not convenient for future users that have physical mobility limitations.

the installation of traffic signal pre-emption systems that would stop vehicular traffic with signals, bells, and gates as trains pass through. At-grade crossings are undesirable as a rule and new crossings are highly discouraged due to the safety risks they pose to the public regardless of the safety measures employed. The frequent and recurrent blockage of traffic by the proposed train would cause increased vehicle congestion at the proposed crossings and would negatively impact response times for emergency vehicles. Additionally, the distance between the Alternative 2 alignment and the Redondo Beach Transit Center should be evaluated for connectivity and efficiency between transit systems. The approximate three-quarter mile distance between the two would reduce effectiveness to an efficient multi-modal outcome and not convenient for future users that have physical mobility limitations.

Economic Impact: Assess the potential economic impacts to businesses located along the Hawthorne Boulevard commercial corridor that may occur with Alternative 2 both during construction due to reduced access or traffic detours, and after construction. Include an assessment of tax base for the City of Torrance during and after construction resulting from Alternative 2. Include the potential loss of existing commercial operations located on commercial and industrial properties and the impact to nearby residential properties where the alignment would rejoin the Metro right-of-way near 190th Street.

Finally, the environmental analysis for each Project alternative should assess the potential demand increase to the Torrance Regional Transit Center and need for additional parking resulting from introduction of the new mode of transit. The Draft EIR should include analysis for constructing a multilevel parking structure up to 1,500 vehicles at the Torrance Regional Transit Center to accommodate increased ridership along the C Line and connecting transit systems. The extension of the Line C to Torrance requires a 3% local match contribution, which is provided by the construction of the Torrance Regional Transit Center via South Bay Measure R Highway Program funds in the amount of $25.7 Million.

The City of Torrance has many mechanisms at its disposal to reach individual homeowners, business owners, homeowner associations, and business associations. It is strongly recommended that all stakeholders in the City be reached and engaged, particularly those that live near to where the Project alternatives are proposed.

The future of public transportation and regional connectivity will be heavily impacted by the decisions made in the selection of one of these two alternatives. There is presently limited light rail service into the South Bay region of Los Angeles County, and this crucial enhancement of the transportation system is a great opportunity to building the infrastructure needed for the next generation of residents living and working in the South Bay. Therefore, the City of Torrance continues to affirm its support of **Alternative 1** as the best alternative to address all needs, present and future, for the South Bay.

If there are any questions, of if there is anything the City of Torrance can do to continue our collaboration and advocacy to the strengthen and enhance public transportation in the region, please do not hesitate to contact Kim Turner, the Director of Torrance Transit, at (310) 618-6245.

Sincerely,

Re: Metro South Bay C-Line Extension to Torrance Regional Transit Center

Honorable Ara J. Najarian and the Esteemed Members of the Board:

On behalf of the City of Torrance, I am writing to convey our official position and continued support for the C-Line Extension to Torrance using the existing L.A. Metro Railroad Right-of-Way (ROW) Alternative. This alignment provides the best opportunity for project acceleration and completion by the 2028 Olympics hosted in Los Angeles. Implementation of the ROW alignment will create opportunity for greater regional connectivity, economic growth, and traffic mitigation for the South Bay and all of Los Angeles County. Project completion and operation to support the 2028 Olympics should be of utmost priority with respect to the project schedule.

As Metro conducts its Public Scoping Meetings and engages the public throughout the process for the Draft Environment Impact Report (EIR) for the C-Line Extension, city staff reviewed the proposed alternatives and attended the neighborhood walks and community meetings to better understand the impacts of the two alignments. The Right-of-Way Alignment, which allows the new rail line to continue safely along the existing right of way to the Mary K. Giordano Regional Transit Center, should be the locally preferred alternative. This alternative also creates the least impacts to residents and businesses within the City of Torrance.

Initially, our governing board considered proposing a 4th option in which the train would be fully underground (e.g. – a subway). However, after speaking with L.A. Metro staff at our Council Meeting on October 25, 2022, we confirmed this option was not cost effective and had not been selected by the Metro Board for moving forward into the Draft Environmental Impact Report back in 2018. Furthermore, Metro staff stated that the fully underground option would most likely not allow this project to be expedited for the completion before the 2028 Olympics.

Additionally, the City of Torrance is requesting that the Metro Board and LA Metro staff consider our concerns and the following suggestions as the project proceeds with its environmental impact assessment.

ROW Alignment is City of Torrance's preferred alternative as it has better chance of completion by the 2028 Summer Olympics in Los Angeles

The ROW alignment was initially fully funded under the Measure R and Measure M, which were a half-cent sales tax approved by the voters in 2008 and 2016. In addition, the ROW Alignment would create the least amount of impacts in terms of traffic congestion for residents of Torrance and displacement of our businesses as compared to the elevated Hawthorne Blvd. Alignment. With the 2028 Summer Olympics scheduled to take place in Los Angeles, having the project completed on time using the ROW means that Torrance and South Bay residents can take the new rail line to all of the sporting events. It will also alleviate major traffic congestion for cities along the 405 Freeway. According to Metro Staff, the projected ridership to and from Torrance for the C-Line Extension is higher than the projected ridership for other cities.

The ROW Alignment can potentially create more benefits to the surrounding communities than the Elevated Hawthorne Alignment

ROW Alignment would potentially provide improved mobility and minimize environmental impacts compared to the Hawthorne Blvd. alignment. Based on Metro staff's assessment of performance and project goals as part of the Supplemental Alternative Analysis submitted to the Metro Board on September 19, 2018, ROW alternative will perform better in the areas of Improved Mobility, Cost Effectiveness and Financial Feasibility, and Travel Time compared to the other alternatives.

Currently, the existing freight tracks do not have safety barriers surrounding them. Metro staff mentioned that the ROW alignment will include looking at adding barriers to prevent pedestrian/rail interactions/accidents.

Pasadena, Santa Monica, and some of the surrounding communities to the Metro L and E Lines have experienced increase in property values. In a 2013 study conducted by Center for Neighborhood Technology, commissioned by American Public Transportation Association, and in partnership with National Association of Realtors, researchers found that areas within frequent transit service outperformed others as a whole by 41.6 percent. Additionally, neighborhoods near transit had an effect on the resilience of property values, which benefited more from transit that was well connected and had a higher frequency of service. Households living in these areas had better access to jobs and lower average transportation costs than the region as a whole.

The Elevated Hawthorne Blvd. Alignment will cause major impacts to Torrance residents and businesses along this Corridor

The second alignment is to build an elevated railway along Hawthorne Boulevard. This will affect many businesses in the City of Torrance, including the Volvo Cars South Bay Dealership located on Hawthorne Blvd. and 190th Street. Other businesses and residents along Hawthorne Blvd. in Torrance will have to live with seeing an elevated train and columns adjacent to their homes. The Hawthorne alignment will have negative impacts to their current way of life as there is no existing rail line going through the area. Other concerns from the Torrance community include noise and

vibration, visual aesthetics and an increase in traffic on Hawthorne Boulevard. Moreover, Metro staff should also include costs and delays potentially caused by encroachment along the 405 Freeway and on Hawthorne Boulevard in their analysis. The Elevated Hawthorne Boulevard Alignment may also require travel lane and/or turn pocket modifications in the City of Torrance. Last but not least, Metro staff should consider the effects of the elevated train structure casting a shadow on business and homes within the affected corridors.

In contrast, the ROW alignment will utilize most of the existing right-of-way currently owned by L.A. Metro. Additionally, Metro is planning to study and provide sound barriers to alleviate not only the low noise from the new light rail, but also to help alleviate the noise from the existing freight rail for the surrounding communities. Furthermore, Metro staff mentioned at the April 2022 Neighborhood Walks that they will work with BNSF Railway to upgrade and replace some of the older existing freight tracks as part of the construction process. This will further reduce the noise level coming from the existing freight rail.

Again, we strongly support the Right-of-Way Alignment and oppose the Elevated Hawthorne Boulevard Alignment. If you have any questions or concerns, please contact our Transit Director, Kim Turner at (310) 618-6245 or KTurner@TorranceCA.Gov. Thank you for your consideration.

Sincerely,

George K. Chen

GEORGE K. CHEN
MAYOR

March 15, 2023

Honorable Chair Ara J. Najarian
Los Angeles County Metropolitan Transportation Authority
Board of Directors
1 Gateway Plaza, Mail Stop 99-3-1
Los Angeles, CA 90012

Dear Chair Najarian,

As L.A. Metro prepares to bring light rail to the South Bay via an extension of the existing C-Line (formerly "Green Line") and studies the three options, we write to encourage you to support the Proposed Project: Right-of-Way with Elevated/At-Grade Option.

The Right-of-Way with Elevated/At-Grade Option utilizes existing L.A. Metro Right-of-Way with a combination of elevated and at-grade segments and is the most cost-effective route, leveraging existing transit investments in the Mary K. Giordano Regional Transit Center and the Redondo Beach Transit Center. Additionally, it does not encroach on I-405, avoids businesses, traffic and parking impacts on Hawthorne Blvd.

Los Angeles drivers are estimated to spend an average of approximately 95 hours in traffic, costing $1,600 per driver annually. The light rail extension to the South Bay will bring numerous benefits to our region, including an alternate mode of transportation for those traveling along the I-405 corridor, save passenger commute times and alleviate traffic on roadways. The extension will also provide vastly improved access to regional destinations, connections to the greater L.A. Metro regional rail system and reductions in air pollution and greenhouse gas emissions by about 2,369 metric tons of C02 annually.

Additionally, the C-Line extension is estimated to serve 65,000 jobs in the project area by 2042, with most riders traveling to and from Torrance in addition to surrounding cities, such as Redondo Beach, Gardena, Carson, and Long Beach. It is also projected to generate between 10,300 – 16,200 new daily transit trips and improves equity by serving 18% of the low-income and 47% of the minority populations in the project area.

3031 Torrance Boulevard • Torrance, California 90503 • 310/618-2801 • FAX 310/618-5841

The other route options for Light Rail on Metro's Rail Right-of-Way/Trench and Elevated Light Rail along Hawthorne Blvd. would require major construction in the area and result in further delays for the project. The Elevated Hawthorne Blvd. option is inconsistent with voter-approved funding initiatives. It will cause significant impacts to local businesses and the economy, including loss of parking, impacting businesses along Hawthorne Blvd., and creating accessibility and connectivity issues to the Redondo Beach Transit Center.

For too long the South Bay region has waited for this light rail investment. Please advance the only option that builds on a completed right-of-way capital investment, minimizes commuter disruption and realizes both environmental and ridership access the soonest: **The Right-of-Way with Elevated/At-Grade Option**. The Torrance City Council supports bringing light rail to the South Bay via the route planned years ago along with investments made to integrate the extension of the existing C-Line via the Metro Right-of-Way Elevated/At-Grade Option. This is the only option with the opportunity to complete by LA28 if given the focus, funding, and support of not only the county, but the entire nation. Thank you for your time and consideration.

Sincerely,

[redacted]

Honorable Ara J. Najarian
Chair, Board of Directors
Los Angeles County Metropolitan Transportation Agency
1 Gateway Plaza, Mail Stop 99-3-1
Los Angeles, CA 90012

Dear Chair Najarian,

I write in support of the Right-of-Way Elevated/At-Grade Alignment option for extending the C Line (Green Line) as LA Metro prepares to expand light rail in the South Bay.

For people traveling along the I-405 corridor, this C Line extension will provide a much-needed alternate mode of transportation that will reduce commute times and alleviate roadway traffic. The project will improve access to regional destinations, provide connections to the greater LA Metro regional rail system, and reduce air pollution – all while expanding equity by serving low-income and minority populations in the C Line extension project area.

By leveraging existing investments in the Mary K. Giordano Regional Transit Center in Torrance and the Redondo Beach Transit Center, the Right-of-Way Elevated/At-Grade Alignment is the most cost-effective option. The other two route options (Light Rail on Metro's Rail Right-of-Way/Trench and Elevated Light Rail Along Hawthorne Boulevard) would be significantly more expensive while causing negative impacts to local businesses and hindering accessibility to the Redondo Beach Transit Center.

Thank you for your serious consideration of the many important fiscal, environmental, economic, and community factors that go into extending the Metro C Line. If you have any questions, please do not hesitate to contact me at (310) 318-6994 or senator.allen@senate.ca.gov.

Sincerely,

SUBJECT: Letter of Support for C-Line Extension to Torrance

Dear Ms. Sheridan,

As L.A. Metro prepares to bring light rail to the South Bay via an extension of the existing C-Line (formerly "Green Line") and studies the two potential alignments, we write to encourage you to support the Proposed Project: Right-of-Way with Elevated/At-Grade Option.

The Right-of-Way with Elevated/At-Grade Option utilizes existing L.A. Metro Right-of-Way with a combination of elevated and at-grade segments. Additionally, it does not encroach on I-405 Freeway, avoids business, traffic and parking impacts on Hawthorne Blvd. and is the most cost-effective option.

Los Angeles drivers are estimated to spend an average of approximately 95 hours in traffic, costing $1,601 per driver annually. This Project will provide an alternate mode of transportation for those traveling along the I-405 corridor, which will help save passenger commute times and alleviate traffic on roadways. The extension will also provide more equitable access to regional destinations by improving connections to the greater L.A. Metro regional rail system and reduce air pollution and greenhouse gas emissions by about 2,369 metric tons of C02 annually, making transit a more viable transportation choice. Additionally, the C-Line Extension is estimated to serve 65,000 jobs by 2042, generate between 10,300 – 16,200 new daily transit trips and improve equity by serving 18% of the low-income and 47% of the minority populations in the project area.

The other route options would require major construction in the area and will result further delays for the project. The Elevated Hawthorne Blvd. option is inconsistent with voter-approved funding initiatives. It will cause significant impacts to local businesses and the economy, most notably major traffic burden at multiple intersections within the City of Torrance. LA Metro has identified six intersections within Torrance which would experience worse traffic conditions than current flow, which will undoubtedly force cars onto less trafficked, more residential streets.

For too long the South Bay region has waited for light rail investment. Please advance the only option that builds on completed right-of-way investment, minimizes commuter disruption

and realizes both environmental and ridership access the soonest: The Right-of-Way with Elevated/At-Grade Option.

Thank you for your time and consideration.

City Manager Aram Chaparyan
City of Torrance
3031 Torrance Blvd.
Torrance, CA 90503

Subject: Support for the Green Line Extension to Torrance Project

Dear City Manager Aram Chaparyan,

Connection is something every human on this planet strives for. A deep bond that is formed between people and communities to make them feel seen and valued, giving a sense of belonging. The extension of the Metro C-Line will connect Individuals, families, communities, and businesses. There are many benefits to this extension besides connecting communities and businesses. It will build thriving communities, create jobs, ease traffic congestion, and promote a cleaner environment.

The Metro C line (Green) Extension project according to the August 14, 2023, C line extension to Torrance Project update by Los Angeles County Metropolitan Transportation Authority would reduce 49,000 vehicle miles traveled (VMT) per day resulting in a reduction of about 2,370 metric tons of carbon dioxide equivalent per year in 2042. With reduction of VMT and carbon emissions the C Line will provide a reliable and convenient alternative to driving, alleviating traffic congestion, and save travel time for people accessing businesses, schools, and jobs in the surrounding communities. This is something that has been an issue for Torrance since the mid 1950's. These reductions will help our community reach our Climate change goals. Not only will the C line better out community emissions and air quality, but it will also support the community and surrounding cities with opportunities.

The construction of the C line will provide jobs and opportunities for surrounding business providing economic growth. The project is expected to support 65,000 jobs by 2042 according to Torrance transit Planning Manager David March. The extension allows for businesses to grow with more foot traffic and easier access to big and small businesses in Torrance and surrounding cities and connecting the South Bay in ways that are constrained by today's congestion on local roads.

OFFICE OF CITY MANAGER
SEP 25 AM 11:16

TORRANCE
Area Chamber of Commerce

3480 Torrance Blvd., Suite 305, Torrance CA 90503 | (310) 540-5858 |www.TorranceChamber.com

In a recent poll by a market research firm on the C Line (Green) 670 residents were randomly selected to receive phone calls across Torrance, Redondo Beach, and Lawndale. The survey revealed that 60% of residents are familiar with the project and 67% are supportive of the extension of the C Line (Green) and 8% of the residents surveyed in all three cities opposed the project. The community wants growth. The community wants jobs. The community wants better.

The Metro C Line (Green) extension project has many benefits to the economic growth of the south bay. It will create jobs, ease traffic congestion, allow businesses to thrive and promote a better and cleaner environment. The Torrance Area Chamber of Commerce supports the C Line and the growth of our community.

Thank you for your consideration.

Georgia Sheridan, Project Manager
Los Angeles County Metropolitan Transportation Authority
One Gateway Plaza, Mail Stop: 99-22-3
Los Angeles, CA 90012

March 27, 2023

Dear Ms. Sheridan:

On March 10, 2023, the South Bay Cities Service Council received an update on the C Line Extension to Torrance project during their regular meeting. The Service Council then voted to formally express support for the C Line Extension to Torrance Project, with a preference for the Metro ROW Elevated At-Grade alignment as we found it to be the most efficient, economical option that could most quickly bring benefits to South Bay transit connectivity. Councilmembers felt it important to forward this motion on behalf of our many transit-dependent constituents who may not have the time or opportunity to comment themselves. Councilmembers Ernie Crespo and Glenda Silva abstained from voting on the item, citing their respective positions as representatives of GTrans and Los Angeles World Airports, and the need to consult with their agencies before supporting the motion. Councilmembers Dora "Gaby" Segovia (LA Walks) and Roye Love (Carson, retired) also abstained from the vote.

Questions raised by the South Bay Service Council during the discussion of the project that we would like to see addressed in the draft EIR include:

- How access will be provided from both sides of the Torrance Transit Center Station platform
- Connectivity of the alignments to surrounding transit options
- Availability of drop-off access (kiss and ride) at the stations, as they would likely be used for people traveling to the airport

Overall, the South Bay Cities Service Council urges the Metro Board to authorize moving this project forward as quickly as possible and if possible, to expedite its completion to expand the transit options available for the 2028 Olympics. The South Bay Service Council recognizes that neighboring communities have their individual concerns regarding this project; we encourage Metro to continue its extensive community outreach efforts and to work through those concerns with the local municipalities and community groups. We look forward to the provision of expanded transit access for our region's constituents through the eventual completion of this project.

Sincerely,

[redacted]

Donald Szerlip
Chair
South Bay Cities Service Council

Dear LA Metro Board,

I am writing to express my full support for the Hybrid LPA alignment for the K Line. The proposed right-of-way already exists and already includes an active rail corridor, making it the most cost-effective option and, by a significant margin, the quickest to construct. This alignment reflects years of careful planning and collaboration. I respectfully urge you not to undo the substantial progress that has already been made or delay the construction.

In addition, I respectfully request that you initiate the FEIR for the modified LPA of the S Line as soon as possible. There is no clear justification for additional delays or for increasing project costs when a viable and well-vetted option is already available.

Finally, I strongly encourage you to adopt SB79 as written, without modifications or dilution. SB79 is a critical tool for enabling the transit-oriented development necessary to address our ongoing housing challenges and to significantly improve the effectiveness and ridership of the Metro system. Weakening this legislation would undermine its purpose and the broader regional benefits it is intended to deliver.

Thank you for your time, consideration, and continued commitment to delivering efficient, affordable, and effective transit solutions.

Metro Board of Directors
One Gateway Plaza
Los Angeles, CA 90012

RE: Metro C-Line Extension to Torrance – Support

Dear Metro Board of Directors:

We write in support of the certification of the Final Environmental Impact Report and the approval of the Locally Preferred Alternative to extend the Metro C-Line to the Torrance Transit Center.

As the South Bay representatives in the California Legislature on and off since 2012, we have long awaited the promise of extending Metro light rail service to the South Bay, which has to date been one of the most underserved regions within Los Angeles County for light rail service. This extension will reduce traffic, air pollution, and greenhouse gas emissions by getting more people out of their automobiles and on to public transportation. The project will also create tens of thousands of construction jobs.

In 2018, we negotiated with then Governor Jerry Brown to help secure $231 million in state funding for the Metro light rail extension. That same year, we joined Governor Brown and then Los Angeles Mayor Eric Garcetti, along with Supervisor Janice Hahn and other South Bay elected officials, for the groundbreaking of the Torrance Transit Center, with the declared goal of the Metro extension to be part of the "28 by 2028" list of projects to be completed by or before the 2028 Los Angeles Olympics.

Eight years later, the Metro Board is still debating whether to build the project along the existing Right of Way or to pursue a Hawthorne Boulevard option. This raises significant unanswered questions about how to pay for an estimated $730 million funding shortfall and numerous permanent and temporary commercial property and easement acquisitions that would be required. Additionally, this increases the likelihood of many more years of construction delays and threatened litigation.

We understand the concerns of residents living near the existing Right of Way corridor. It is our understanding that Metro staff have spent countless hours listening to their concerns and have incorporated significant mitigation measures into the proposed Locally Preferred Alternatives to address concerns of noise, vibration, and environmental impacts.

The Metro Board should move forward with the commonsense proposal before it, to certify the Final Environmental Impact Report and to approve the Locally Preferred Alternative to extend the Metro C line to Torrance. This proposal is the result of the extensive, thoughtful process followed by Metro staff to address community concerns while moving forward in the most practical manner, along the existing Right of Way.

Our South Bay communities have waited too long for this Metro light rail extension. Please do not delay this important project any further.

Thank you for your consideration. Should you have any questions, please contact our District Directors, Melissa Ramoso, at (310) 375-0691, and James Reina, at (310) 414-8190.

Respectfully,

[redacted]

AL MURATSUCHI
Assemblymember, 66th District

[redacted]

BEN ALLEN
Senator, 24th District

SARA DEEN
FOR STATE ASSEMBLY

January 20, 2026

Dear Metro Board Members,

My name is Sara Deen. I am a South Bay homeowner, small business owner in Torrance, elected and appointed South Bay school board member, and a candidate for the California State Assembly. Most importantly, I am the mother of two El Camino College students and the daughter of two South Bay seniors. I write in strong support of the staff recommendation to approve the C/K Line Extension.

Safe, reliable public transit reduces traffic, shortens commutes, prevents injuries, and improves air quality. As a healthcare provider, I see firsthand how transit access supports both disease prevention and timely care. As a small business owner, I recognize how rising housing costs push workers farther from their jobs, making affordable and reliable transportation essential for teachers, nurses, school staff, and other essential workers in the South Bay.

The C/K Line Extension will also expand educational opportunities. Reduced transportation costs could allow public schools greater access to field trips and cultural experiences. At the Torrance Transit Summit, I was especially moved by seniors who described how this extension would restore independence and connection for those who no longer drive.

I urge the Metro Board to certify and approve the Final EIR and move forward with the project. The Locally Preferred and Hybrid Alternatives reflect thoughtful engagement with community concerns while advancing a solution that benefits the broader South Bay. I also encourage Metro to commit to sustained investment in transit maintenance—reliable infrastructure requires ongoing stewardship.

This project is an investment in safety, mobility, economic vitality, and intergenerational opportunity. I hope one day to tell my grandchildren that our community chose progress, access, and shared responsibility by extending light rail from Redondo Beach to Torrance.

Thank you for your leadership and consideration.

Sincerely,

[redacted]

Sara Deen

My name is Troy Rubio Trejo, and I am a resident of Los Angeles County. I am writing to express my full support for several critical Metro projects that will greatly enhance regional mobility and equity across our county.

I fully support the Sepulveda Transit Corridor – Modified Alternative 5 (5LPE) and the Final Environmental Impact Report (FEIR). This project is essential to improving north–south connectivity and reducing congestion in one of the most heavily traveled corridors in the region.

I also strongly support the opening of the D Line Phase One through the

Wilshire Corridor, as well as the South Bay extension of the K Line. These projects represent long-overdue investments in reliable, high-capacity transit for communities that need it most.

Additionally, I fully support the Metro Board's selection of the Metro ROW Hybrid Alternative alignment for the South Bay K Line Extension. This alignment will provide efficient service while maximizing long-term benefits for riders and surrounding communities.

The South Bay deserves expanded transit options, and these projects are vital to improving access, mobility, and quality of life. I urge the Metro Board to continue moving forward decisively on all three of these major projects.

Thank you for the opportunity to provide public comment and for your continued leadership.

Respectfully,

Troy Rubio Trejo

I am opposed to putting additional metro lines in the South Bay. This will increase crime and transport more crazed homeless people to our communities. We want to remain above the crime, drug and gang riddles communities that all have metro rail access in common—it's the vein that carries criminals and derelicts!

Dear Board Clerk,

I am writing in support of Motion 11.1 Approving Hawthorne Blvd Alignment as the project LPA for C-Line extension to Torrance.

The elevated Hawthorne Bl option makes the most sense and I would like to use it to visit friends and attend cultural events.

Thank you.

Barbara Epstein

Dear Metro Board,

This letter is to note my support as a Lawndale resident for the Hawthorne Blvd Motion for the C/K Line Extension

This is a generational project that will impact residents and families for years to come. While it may cost more - it will have higher ridership and impact the community forever.

Many of you have met my daughter at past Board meetings and community events. She is now a toddler and one of our favorite activities is riding the train from the Marine Ave Redondo Beach station. She loves exploring the beautiful LAX Metro station. We call her our little engineer. (Image attached)

She will be a teenager when this is built. I hope she will be able to take this train to take summer classes at El Camino College.

A Hawthorne Blvd alignment will offer her and I greater opportunity to visit family and friends in Torrance and Redondo. I truly hope the K LIne North is also approved and expedited to connect to

even more great places.

Not only will the Hawthorne Blvd option have the highest ridership, myself included, Hawthorne Blvd with have enthusiastic support from people in Lawndale to help secure funding and permitting while improving transportation access for historically underserved communities.

Lawndale has already been divided once by the 405 freeway years ago. History does not need to repeat itself.

A vote for Hawthorne is a vote for smart transit for generations.

Respectfully,
Patrick

Dear Metro Board:

My name is Jacklyn Ma and I am a 15 year resident of LA, a physician, and I am very concerned about the health affects of climate change, traffic and unsafe streets in LA. So I am writing to enthusiastically support Item 11 and strongly oppose the last minute attempt (Item 11.1) to derail the C Line Extension to Torrance. Metro already owns the ROW, and we should not delay the project by years and spend an extra $700M to get worse ridership! Please support staff's recommendation, and vote no on 11.1.

I support Item 10 - please support staff's recommendation on the Modified Alternative 5 route for the Sepulveda Transit Corridor.

I oppose Item 33 - SB-79 is law in California, and it makes Metro look absurd to ask for an exemption for L.A. County. In fact, if Metro embraced SB-79 and more housing was built around Metro stops, it would lead to higher ridership of the system, less car dependency, and ultimately improved quality of life for everyone.

Thank you,
Jacklyn Ma

Dear Metro Board of Directors -

One more thing before I have to pick up my kids from school. I'm going to attach two videos of neighbors that I took yesterday while canvassing. I think they're important for you to see. We were able to reach many neighbors whom I had never met before because it was MLK day and people were home.

I promised them these would only be used internally and would NOT go on social media. I have their contact information, if you want to reach out to them please let me know.

Here's the drive with the videos

To Whom It May Concern;
Please do not use the ROW to install metro trains. We are a family community and we do not want this going through our neighborhood. It should be in a commercial through fare. I live about a mile from the ROW and I hear the trains every so often. I cannot imagine hearing that several times per day. I want to hear the birds in my backyard. Put the noise on a busy noisy through fare please! I like the idea of mass transportation but it needs to make sense and not degrade our sense of community and tranquility. Politicians wouldn't put this in their home neighborhood so don't put it in ours please.

Thank you for your consideration,
Michelle Marsden

Dear Metro Board of Directors,

My name is Emily, and I am a Torrance resident. I am writing to raise a concern I only recently became aware of, which I believe is important for the Board to fully understand as you consider the Final Environmental Impact Report.

I live in Torrance and I have close friends who live along the right-of-way, and I know the area well. A few years ago, I received a questionnaire from the City of Torrance related to the C Line Extension. Based on how it was presented and worded, I understood it to be an internal City of Torrance survey intended to inform local decision-making, which I understand now is not the case.

The questionnaire itself was misleading. The framing and language suggested a preferred outcome, and it did not clearly explain the broader context or alternatives being studied. It should have been neutral information, without any sort of slant.

I was recently made aware that my name appears in the Final Environmental Impact Report and that my responses to this questionnaire were submitted by the City of Torrance as an official public comment on the Draft Environmental Impact Report. I did not knowingly submit a public comment to Metro, nor was I informed that my responses would be used in this way or attributed to me in an official environmental document.

I believe residents should be clearly informed when their input is being submitted as formal public comment on a state-level environmental review, especially when the material provided to them is framed in a way that appears designed to steer responses.

I wanted to bring this to the Board's attention so you are aware that some comments attributed to residents may not reflect informed, intentional participation in the environmental review process.

Thank you for your time and for considering this concern.

Sincerely,
Emily, Torrance resident

Hello,

My name is Diego Celaya. I live in Culver City. I have been without a car for about a year. The LA transit system has made it so I can get around to certain places when I need to. The system is decent but could be so much better.

The K line should definitely be extended to Torrance. The route follows an existing rail line. It would help people to travel easier and make parts of the city better connected.

The Sepulveda line should definitely be Alt 5.

And do not change or water down anything about SB79. It will revitalize our city.

Thank you,
Diego

Dear Metro Board,

I am writing to voice my opinions on some of the items at the upcoming Metro Board meeting this Thursday. I was born and grew up in Los Angeles and am currently a City Planning student at Cal Poly San Luis Obispo.

I support Item 10. The Modified Alternative 5 for the Sepulveda Transit Corridor is a great alternative for what may become the most important line in our entire network. The staff were right to recommend this alternative.

I support Item 11 and oppose the last minute attempt (Item 11.1) to derail the C Line Extension to Torrance. To pass item 11.1 would be to cave to a small group of loud opponents who do not actually reflect public opinion about our public transit. Metro already owns the ROW; we should avoid delaying the project by years and spending hundreds of millions of more dollars. Please support staff's recommendation, and vote no on 11.1.

Finally, I oppose Item 33. SB 79 is the law in California, to ask for an exemption is ridiculous and will limit us from creating more housing around transit stops which will increase ridership and ease the housing crisis.

Thank you for your consideration,
Owen Taylor

Hi, my name is Bryce, and I'm a *Hawthorne* resident and a 12th student at Lawndale. At the Thursday Metro Board meeting, please support the K Line Extension to Torrance and the Hybrid LPA.

The Hybrid LPA is our best option to get high capacity rail to the South Bay with a clear path to construction and the most community benefits, and it's been studied extensively. I ask you to certify and approve the Final EIR and advance the staff recommendation. This could more a easier process then the Hawthorne alignment.

Be cautious of spoofed emails that appear to come from trusted sources. Report suspicious emails. Follow Metro policies and update accounts only through official channels.

My name is Kare'l, I live in Carson and work in Torrance. I support the Hawthorne Blvd elevated option and strongly oppose the ROW option. The Hawthorne option will revitalize Lawndale, boost the economy, preserve green space, and increase ridership, among many other benefits. Hawthorne Blvd is already designed for commuter railway track and previously housed the Pacific Electric Red Cars.

The ROW option is opposed by entire communities, as it poses significant physical, financial, environmental, and emotional risks. It will decimate communities that have existed for generations.

Please support the Hawthorne Blvd elevated option.

Thank you,
Kare'l Lokeni

Dear Board Clerk:

I would like to email my support of the Hybrid LPA for the C/K Line South Bay extension to Torrance.

Separately, very pleased with the recent announcement to go with the Modified Alt 5 route for the Sepulveda it will make going to the valley so much better than the 101.

Honorable Metro Board Members,
My name is Andrew Scott Blackney and I am a resident and homeowner in Lawndale, and a hiring manager for the Aerospace Industry in the South Bay area.
I am writing to urge you to certify the Final EIR and approve the Hybrid Alternative (Locally Preferred Alternative) for the C/K Line Extension to Torrance. As a hiring manager in the aerospace industry, one of the biggest complaints I hear from prospective junior candidates is the commute. They understand that housing and rent prices in the South Bay are a massive burden and look elsewhere to live before they can save up to live where they work. They want to rely on metro for their daily commute. We need to offer the connectivity that our modern workforce demands. This train fulfills a critical need: allowing people access to the South Bay without requiring a car. This extension is a no brainer for this. Unlike other major capital projects currently facing massive budget gaps or awaiting uncertain federal aid the LPA implementation C Line Extension is financially secure. Because the LPA does not rely on federal funding, it avoids the unpredictable delays and red tape associated with federal grant cycles. The Hawthorne option would delay this project unnecessarily with federal red tape. Your staff have done extensive work and to throw all of that away is foolish. When the federal government wants to build a high-ticket item they listen to the staff, people such as myself, and don't go off of vibes. We have the money, we have the alignment, and all that's left is certification. Let's not abandon all of the hard work that has been put in and all put off high quality transit for the South Bay for a generation.
Sincerely, Andrew Scott Blackney

Honorable Metro Board Members,

My name is Andrew Blackney and I am a resident and homeowner in Lawndale.

I am writing to urge you to certify the Final EIR and approve the Hybrid Alternative (Locally Preferred Alternative) for the C/K Line Extension to Torrance.

While my City Council has frequently opposed the Metro Right-of-Way (ROW) alignment, please understand that they do not speak for all Lawndalians. Many of us in the community fully support the LPA and want to see this project move forward without further delay.

I support the Hybrid Alternative (ROW) for the following reasons:

1. Protecting Hawthorne Blvd: The alternative option—building down Hawthorne Boulevard—would be disastrous for our city. It would subject our primary commercial corridor to years of heavy construction, gridlock traffic, and business closures. The LPA preserves Hawthorne Boulevard for our local businesses and residents.

2. Smart Grade Separation: The Hybrid Alternative includes a trench at 170th Street. This is a "win-win" that provides the speed and efficiency of the ROW while addressing community concerns about safety and noise at key intersections.

3. Connectivity & Future: I want my family to have access to the regional rail network. Delaying this project with the Hawthorne Option or forcing a "restart" to study inferior alignments only hurts residents who are waiting for a clean, car-free alternative to reach LAX, SoFi, and the rest of the county.

Please stop the delays. The "silent majority" of Lawndale residents are ready for this train. We urge you to hold firm to the studied facts, certify the EIR, and build the Hybrid Alternative.

Sincerely, Andrew Blackney

Honorable Metro Board Members,

My name is Jessicalina Blackney and I am a resident and homeowner in Lawndale.

I am writing to urge you to certify the Final EIR and approve the Hybrid Alternative (Locally Preferred Alternative) for the C/K Line Extension to Torrance.

While my City Council has frequently opposed the Metro Right-of-Way (ROW) alignment, please understand that they do not speak for all Lawndalians. Many of us in the community fully support the LPA and want to see this project move forward without further delay.

This issue is deeply personal to me I nearly lost my husband when a driver ran a red light and left him bleeding on the street to die. Praise God good Samaritans came to his aid. The Hawthorne option would similarly put many more metro riders at risk. This intersection is also more accidental prone then any other in the area.

Please stop the delays. I urge you to hold firm to the studied facts, certify the EIR, and build the Hybrid Alternative.

Sincerely, Jessicalina Blackney

I am writing today in support of the Hybrid LPA alignment for light rail in the South Bay and In opposition of the Hathorn alignment.

I am an engineer that lives in Hathorn in the immediate vicinity of both options. The vote on this alignment change will be my primary concern for the upcoming elections of all transit board members and I know we have considerable numbers of Hathorn residents you likely are not counting on voting that feel the same.

The main reason for the LPA Hybrid alignment is the much more mature engineering, significant cost savings and the reduced construction impacts.

The cost savings for the LPA alignment is 3/4s of a billion dollars witch is more value that anyone commenting or voting will generate in there enter lifetime. Assuming a city wide tax base of 10 million this "slight adjustment" will end up costing over 70 dollars per tax payer in the entirety of la country all for a alignment that has not had through engineering completed. Any attempt to go with the Hathorn alignment is serious misuse of public funds to the point of being highly unethical.

The disruptions will also be so much worse with the Hathorn alignment it will request closure of far more road lanes for far longer resulting in the loss of tens of thousands of hours in inversed traffic and significantly higher risk to workers from operating in proximity to traffic. It will also require the taking of several minority owned business where has the hybrid alignment requires effectively not takings and inconveniences less than 2 dozen home owners that already live next to an active frate rail line. The relocation of the major storm frame also comes with significant technical risk and if a big storm comes at exactly the wrong time could result in signfcart flooding a displacement though the area.

Hello:

Please support K Line South Bay Extension!

Why delay or cancel this entire project after years of studies and money already spent? Is this not already over 50% funded? This is a regional issue and a handful of angry and loud homeowners should not be able to drown out the thousands of future riders this project will support. LA Metro and our region needs to be in support of getting folx OUT OF THE CAR: that's the environmental goal we need to be after! Metro already has the right of way, already owns the land, and there are already rail tracks along the proposed route. Why stop this? It makes literally no sense.

People around the country and globe are looking at Los Angeles right now, and soon will be visiting for World Cup and Olympics. We've already delayed these projects enough and we need to show the world that the region is moving towards the transit future we were promised.

LA can do this! Its' not fair to let a small group of people decide the future of our region. Metro owns the land to build and the plans to make this happen, you owe it to us all to get this project going.

Thank you,
Garry

LA Metro Board Clerk,

Dear the Honorable Chair Dutra and all Directors of the LA Metro Board,

As a 15+ year resident of Redondo Beach and employee of the Torrance school district, I am strongly supportive of the C/K Line Extension to Torrance. Please certify the Final EIR and advance the project with the Hybrid LPA. The Hybrid LPA (selected by the Board in 2024) and refined in the FEIR is necessary to upgrade the existing freight corridor to be safer and quieter, connects directly to new bus centers, and improves green space with bike and pedestrian paths. With the new K Line and LAX Metro station, this project brings a reliable 19-minute trip from Torrance to LAX and direct rail access to Inglewood, Gateway Cities, Culver City, Santa Monica, and Downtown LA.

The South Bay urgently needs a transit alternative to the congested I-405 and currently lacks rapid transit. While Metro has expanded rail across the County, the Extension to Torrance, promised in Measure R and Measure M, is long overdue. The Hybrid LPA avoids added cost, approvals, and disruption in the Hawthorne alternative, which could delay delivery by 2-4 years, cost nearly $1 billion more, and generate risks to drivers, businesses, and transit riders. The Hybrid LPA/ROW is supported by the City of Torrance, dozens of community, business, and labor organizations and has secured over 52% of funding, creates 15,000 jobs, and attracts 1.5 million new riders. Please certify the Final EIR and champion this critical rail project for South Bay and regional mobility.

Thank you for listening to your constituents,

Heather Cole

Dear Chair Dutra and LA County Metro Board members,

Please see the attached letter from Abundant Housing LA regarding our continued support for the Hybrid LPA for C/K Line extension to Torrance.

Specifically, at tomorrow's Metro Board meeting, we urge you to approve the staff recommendation for Item 11 and reject item 11.1. We are deeply troubled by the last-minute effort to change the route of this light rail extension. A change of this magnitude and at this juncture would significantly delay the extension, add millions of dollars in delay and threatens to derail the entire project.

Thank you,
Jacob Pierce

To whom it may concern,

The company I work for (Boeing, El Segundo) is situated adjacent to the K-Line (Green Line) at the Mariposa Station. Please certify the FEIR and Hybrid LPA! This would open up the option for taking the metro to more people at Boeing.

Thank you,
Eliana

Metro Board,

Today I'd like to voice my support for the LPA described in the FEIR for the South Bay extension of the K-Line. As a LA county resident I want to see my tax dollars go to transit projects that serve transit riders the most while being economically viable. The alternative decided on by Metro staff (after considering the comments from LA residents) is the right choice. Please stick to the Metro owned right of way alternative and not the more expensive Hawthorne proposal.

Let's help the people of the South Bay connect to LAX and the wider Metro Network faster and more efficiently!

Thank you for considering my thoughts on this matter.

This is an important regional project that will have a huge impact beyond the line itself and as we switch away from a car-centric transit model. This extension will become keystone to the overall Metro Transit system that must be built following the Metro staff recommendations. The board would be negligent to be swayed by complaints of homeowners who made the decision to buy next to an active railway ROW that are now complaining about an active rail line.
The Board must not be persuaded by these folks who are putting their own interests above the broader community.

Dear LA Metro Board Members and Staff,

I am writing to express my strong support for the proposed C Line (Green Line) extension into Torrance.

This project is a long-overdue investment in the South Bay and a critical step toward a more connected, equitable, and sustainable regional transportation system. Torrance and surrounding communities remain one of the largest population and employment centers in Los Angeles County without direct rail access. Extending the C Line would significantly improve access to jobs, education, healthcare, and cultural destinations across the county.

The extension would also help reduce congestion on heavily burdened corridors such as the I-405 and I-110, provide a reliable alternative to single-occupancy vehicle travel, and support the region's climate and air-quality goals. In addition, it creates opportunities for transit-oriented development that can add much-needed housing near jobs and transit.

I strongly urge Metro to certify the Final EIR and approve the project to Extend the C Line to Torrance.

Thank you for your leadership and for considering my comments.

Sincerely,
Michael Colich

C Line Extension to Torrance to be considered by the Metro Board

Following public comment and discussion by the Metro Board's Planning and Programming Committee, the project will now be considered at the Metro Board of Directors Regular Board Meeting on Thursday, January 22, 2026 at 10:00 am. The Board will consider certification of the Final Environmental Impact Report (EIR) and approval of the project.

Metro Regular Board Meeting

When: Thursday, January 22, 2026 at 10:00 am
Where: Metro Headquarters, One Gateway Plaza, Los Angeles, CA 90012
Watch live: Stream online via the Metro Board webpage at boardagendas.metro.net.

Providing Public Comment

There are multiple ways to provide comment on the project:

- **In-person:** Sign up using the tablets in the Metro Headquarters lobby before 9:45 am on the day of the meeting. For up-to-date details, please visit https://boardagendas.metro.net/.
- **By phone:** Call-in instructions will be available the evening before the meetings on the Metro Board's live stream page.
- **Written Comments:**
  - Email: boardclerk@metro.net
  - Mail: Office of Board Administration, One Gateway Plaza, MS: 99-3-1, Los Angeles, CA 90012. Written comments must be received by 5pm on the day prior to the meeting.

You can also submit comments prior to the Metro Board meeting by email, phone or mail via the project contact information below.

About the Metro Board of Directors

The Metro Board of Directors is Metro's governing body and is responsible for making final decisions on major transit projects, policies, and investments across Los Angeles County. Board approval of the C Line Extension to Torrance would allow Metro to advance design, coordination, and future funding efforts for the project.

Next Steps

If the Metro Board certifies the Final EIR and approves the project, Metro will begin advancing the C Line Extension to Torrance into the next phase of work. This includes refining engineering and design plans, coordinating with corridor cities, pursuing additional funding opportunities, and continuing First/Last Mile planning to improve access, safety, and connectivity for future riders.

Visit metro.net/clinext to learn more about the project and sign up for project updates by clicking here.

El proyecto de Extensión de la Línea C a Torrance pasará a ser evaluado por la Junta de Metro

Tras los comentarios públicos y el debate del Comité de Planificación y Programación de la Junta Directiva de Metro, el proyecto se someterá ahora a consideración en la reunión ordinaria de la Junta Directiva de Metro que se celebrará el jueves 22 de enero de 2026 a las 10:00 am en la cual la Junta considerará la certificación del Reporte de Impacto Ambiental Final y la aprobación del proyecto.

Asamblea ordinaria de la Junta de Metro

¿Cuándo? Jueves, 22 de enero de 2026 a las 10:00 am
¿Dónde? Sede de Metro, One Gateway Plaza, Los Angeles, CA 90012
Véalo en vivo: Transmitido de manera virtual a través de la página web de Metro en boardagendas.metro.net.

Presentación de comentarios públicos

Hay diversas maneras de presentar comentarios sobre el proyecto:

- **De manera presencial:** Regístrese usando las tablets que se encuentran en el vestíbulo de la sede de Metro antes de las 9:45 am el día de la reunión.
- **Por teléfono:** Las instrucciones para llamar se encontrarán disponibles la noche anterior a la reunión en la página de transmisión en vivo de la Junta de Metro.
- **Mediante comenarios escritos:**
    - Correo electrónico: boardclerk@metro.net
    - Correo postal: Office of Board Administration, One Gateway Plaza, MS: 99-3-1, Los Angeles, CA 90012. Los comentarios escritos deberán ser recibidos antes de las 5:00 pm del día anterior a la reunión.

También puede presentar comentarios antes de la reunión de la Junta de Metro por correo electrónico, por teléfono o por correo postal usando la información de contacto del proyecto que se encuentra debajo.

Infomación sobre la Junta Directiva de Metro

La Junta Directiva de Metro es el órgano rector de Metro y es responsable de tomar las decisiones finales sobre los proyectos de transporte público relevantes, sobre las políticas y sobre las inversiones en todo el condado de Los Ángeles. La aprobación de la Extensión de la Línea C a Torrance por parte de la Junta le permitiría a Metro avanzar con el diseño, la coordinación y los futuros esfuerzos de financiamiento para el proyecto.

Próximos pasos

Si la Junta de Metro certifica el Reporte de Impacto Ambiental Final y aprueba

el proyecto, Metro comenzará a avanzar con la próxima etapa de trabajo de la Extensión de la Línea C a Torrance. Ello incluye optimizar los planos de ingeniería y diseño, coordinar con las ciudades por donde pasará el corredor, buscar oportunidades de financiamiento adicional y continuar con la planificación de la primera/última milla para mejorar el acceso, la seguridad y la conectividad para los futuros pasajeros.

Visite metro.net/clinext para obtener mas infomacion sobre el proyecto y registrese para recibir las actualizaciones del proyector

Hi there! As a metro rider, I strongly support the Hybrid alignment for the South Bay extension, as the cheaper option, it means that funding will happen sooner, helping me connect car-free from my home in Pasadena to my In-laws in Torrance cheaply when driving is not an option. This will maximize Metro's investment in the region and make the K line an excellent transit spine for the region.

I also strongly support the staff recommendation for the Sepulveda line, Heavy rail is the absolute right choice and the connection with UCLA will be so so valuable.

Thanks!
Andrew Cobb, Pasadena

Hello Board Members,
I'm a Los Angeles resident writing in support of the Hybrid LPA on the metro right-of-way for the K line extension to Torrance. This extension is such an important piece of LA's transit. Car-free residents like myself will love having a faster, more frequent way to get between Crenshaw and Torrance (and eventually, Long Beach!), and the Metro ROW alignment means we can have that faster and for less money. I'm honestly astounded that any other alignment would be considered. Building on the Metro-owned right of way next to the existing freight tracks not only makes the construction easier and more cost-effective, but will also make pedestrian, cyclist, and car intersections with the freight line safer. People who live nearby are already accustomed to trains on the corridor, and this project will make that experience more pleasant and protected. The Hybrid LPA is the obvious choice.

Hello! My name is Lela Creamer, and I'm a Los Angeles County resident. I am writing in support of the South Bay Extension FEIR certification and the Hybrid LPA. I believe that this option holds the best balance between low costs, effective service, providing a net positive benefit to the environment, and also being minimally disruptive to the surrounding area because it follows the path of an already active freight line. I believe that switching to the Hawthorne alternative will cost significantly more than the current plan and, additionally, invites the possibility of tremendous delays that could increase costs even further and potentially kill the entire project.

I also separately wanted to express my gratitude for the work that you do. I'm proud to live in a city that is working to develop its public transit, and I'm really excited by the developments in the Sepulveda Transit Corridor. Thank you for working so hard to connect this city and to improve the lives of its residents—it means more than you know.

Best,
Lela Creamer

Honorable Directors of LA Metro and South Bay Cities COG,

As someone who works and travels around the South Bay, I write to express my strong support for the C/K Line Extension to Torrance. I ask that you advance certification and approval of the Final EIR. The Hybrid Locally Preferred Alternative is a thoughtful, fully grade-separated solution that serves everyone—residents, transit riders, bus riders, drivers, cyclists, and pedestrians—by upgrading the aging freight corridor to be both safer and quieter. It provides a direct, under 19-minute ride from Redondo Beach and Torrance to LAX, connects to two regional bus centers, and adds vital walking and biking paths. It is also the preferred path by the majority of people in the South Bay area, and vocal opponents of this alignment are a fringe minority.

This project will link the South Bay and communities along the K Line with access to jobs, housing, healthcare, sporting events, and education—boosting local economies and community connections. As someone who works in aerospace, this project will be crucial to connecting job centers for such an important industry of LA to the rest of LA, enabling opportunities for people who work in aerospace and live around LA, who want to work in the South Bay's important aerospace industry. It is of national importance that this project gets going ASAP, due to these jobs in the area.

Critically, this Hybrid Locally Preferred Alternative avoids extra costs and significant approval hurdles from Caltrans and SCE facing the Hawthorne alignment. This project was promised to South Bay voters in Measure M nearly a decade ago; after years of fighting for it, we must champion and deliver this for the region. The project meaningfully addresses community concerns while generating 15,000 local jobs, attracting 1.5 million new riders, and remaining cost-effective and well-funded via Measure M, R, and state grants without requiring federal funds. Please continue your support for the project and advance certification of the C/K Line Extension to Torrance FEIR without delay.

Thank you.

Board Clerk Board Clerk,

Honorable South Bay Cities COG and LA Metro Directors,

As a South Bay resident, I urge you to support and certify the Final EIR for the C/K Line Extension to Torrance. The Hybrid Locally Preferred Alternative is a fully grade-separated, community-supported solution that modernizes an aging freight corridor, improves safety and noise conditions, and provides a direct under-19-minute ride from Redondo Beach and Torrance to LAX. It is supported by numerous businesses, organizations, and officials across the South Bay. It strengthens regional connections to jobs, housing, education, and communities along the K Line while improving first-last mile mobility. This project delivers on a Measure M promise, addresses community concerns, and brings 15,000 jobs and 1.5 million new riders to the region while remaining highly cost-effective. The project has been studied for decades, with extensive refinement in the FEIR, and the LPA will be fully competitive for additional state funding.

Nearly $1.4 billion is already secured—over 50% of total costs—putting it ahead of other Metro rail projects at FEIR certification. No major rail project is fully funded before EIR approval; certification is what unlocks additional grants and creates a shovel-ready project. Other Metro projects have advanced with far less funding in place, from Eastside Transit Corridor (45%) to Southeast Gateway Line (35%) to ESFV Light Rail (22%). The C/K Line Extension is well-positioned to receive additional state funding, and now is the time to champion and advance it. Please advance the project without delay to serve the entire South Bay.

Be cautious of spoofed emails that appear to come from trusted sources. Report suspicious emails. Follow Metro policies and update accounts only through official channels.

Hello,

As a homeowner in El Segundo, I'm writing to express my strong support for the Locally Preferred Alternatives (LPA) for the C Line Extension to Torrance and the Sepulveda Transit Corridor Project. I strongly request that the Metro Board approves the LPA alternative for these two projects and certifies the Final Environmental Impact Report for the C Line Extension to Torrance.

The LPA for the C Line Extension to Torrance is a common sense route that utilizes existing Metro-owned right of way (ROW) to effectively connect multiple transit centers in a cost effective manner. There are significant issues with the Hawthorne Alternative that is now being proposed. The Hawthorne option is $730 million more expensive, which greatly jeopardizes the project. The Hawthorne alignment additionally requires extensive collaboration with multiple different agencies including Caltrans and Southern California Edison, who will have to relocate major utilities including high-voltage overhead wires. In addition, a major storm drain underneath Hawthorne Blvd will need to be excavated and moved, land acquisitions will be needed, and an additional NEPA review will need to be conducted, which will add 2-4 years and additional costs to the project. All these technical, logistical, and financial challenges posed by the Hawthorne option jeopardize the project being completed at all.

This was originally designed to make use of the Metro-owned ROW, a rare opportunity for rail expansion where significant costs of land acquisitions are not needed. Selecting any other option except the LPA was would be a complete waste of a golden opportunity to expand rail into the South Bay.

Please certify the FEIR and approve of the LPA for C Line Extension to Torrance.

Additionally, the Sepulveda Transit Corridor is one of the most critical projects in the region, providing a vital North-South rail line to connect several different transit lines. The LPA of the Modified Alternative 5 is the preferred route that will provide significant ridership with a travel time that will revolutionize public transit in Los Angeles. Please approve the LPA for the Sepulveda Transit Corridor Project.

Finally, I ask that you do NOT oppose the SB 677 (Wiener) Housing development: transit-oriented development bill. As a homeowner, I recognize that the Los Angeles region is in a dire housing shortage and greatly needs to increase the quantity of housing to make housing affordable. Developing housing around transit stations is a no-brainer decision that will increase ridership (and Metro revenue) significantly and ensure density can be built by relying less on the need for cars.

In summary:

- C Line Extension to Torrance: Approve the FEIR and approve the staff recommended

LPA, do NOT approve the Hawthorne option.

- Sepulveda Transit Corridor: Approve the staff recommended LPA, Modified Alternative 5.
- SB 677 (Wiener) Housing development: transit-oriented development bill: Support the bill and do NOT oppose it.

Thank you,
Adriel Leon,
El Segundo

Good morning Chair and Board Members,
I am unable to attend Thursday's Metro Board meeting in person, but joining LA Forward Institute and other aligned organizations, I am writing to express my strong support for the staff-recommended locally preferred alternatives for both the Sepulveda Transit Corridor (Alternative 5) and the C/K Line Extension to Torrance.These projects deliver on the promise voters made with Measures R and M by expanding fast, reliable rail service to both the San Fernando Valley and the South Bay. They will improve access to jobs, education, and LAX, reduce traffic and emissions, and strengthen Metro's countywide transit network.I urge the Board to approve both projects and move them forward without delay.
Thank you for your leadership and consideration.

Good morning Chair and Board Members.

Joining LA Forward Institute and other aligned organizations, I am writing to express my strong support for the staff-recommended locally preferred alternatives for both the Sepulveda Transit Corridor (Alternative 5) and the C/K Line Extension to Torrance.

These projects deliver on the promise voters made with Measures R and M by expanding fast, reliable rail service to both the San Fernando Valley and the South Bay. They will improve access to jobs, education, and LAX, reduce traffic and emissions, and strengthen Metro's countywide transit network.

I urge the Board to approve both projects and move them forward without delay.

Thank you for your leadership and consideration.

LA Metro Board Clerk,

Honorable Chair Dutra and LA Metro Directors,

I am a resident of North Redondo Beach, living within walking distance of the Metro Right of Way. I am writing to strongly urge the Board to certify the FEIR and approve the Hybrid LPA at Thursday's meeting.

As a father raising my two girls in this neighborhood, I see this project as a generational opportunity to improve equity, safety, and economic access in the South Bay. After decades of study and planning, the time is now for actual progress. Further delay only stifles regional progress and jeopardizes the future of the entire extension, isolating the South Bay community from Metro's growing rail network.

The Hybrid LPA is the only responsible choice because it delivers on the following core goals:

Safety & Rider Equity: The ROW is fundamentally safer for riders than Hawthorne Blvd. It connects directly to the Redondo Beach Transit Center, providing seniors and disabled residents with accessible, secure mobility. Forcing riders to cross an eight-lane highway to board trains on the Hawthorne median is a safety risk we cannot accept.

Connecting Disadvantaged Communities to Jobs: This project isn't just a train; it's a jobs program. It connects high-growth employment centers in the South Bay to the broader Metro network, creating 11,500 daily opportunities for Angelenos to reach better work and education. It also provides thousands of high-quality construction jobs as Metro continues to expand rail access.

Fiscal Responsibility: Choosing the ROW saves nearly a billion dollars and avoids the multi-year construction disruption that would choke traffic and devastate local businesses on Hawthorne Blvd.

Community Response: Metro has addressed resident concerns extremely well. The quiet zones and sound walls will actually reduce existing noise pollution. Grade-separated crossings

and freight track upgrade improve the safety of the ROW. With a 2-for-1 tree replacement and new bike paths, this project represents a massive win for local green space and quality of life.

I want to be very clear: my City Council and a vocal minority immediately along the ROW do not speak for me or the majority of my neighbors. Polling consistently shows nearly 70% support for this project. We want the transit we've been promised for decades.

Please certify the FEIR and move forward with the LPA alignment so the South Bay can finally have the world-class transit it deserves. Let's get this built.

Sincerely,

Alex Fineman
Redondo Beach Resident

Good evening,
My name is Cesar Vasquez, and I am writing in support of the Hybrid Locally Preferred Alternative for the South Bay Extension.
I currently live near the Fairview Heights Station on the K Line, and the Hybrid LPA would make it much easier for me to travel to destinations in the South Bay, including restaurants and businesses in Torrance, without needing to drive. This extension would provide a more environmentally friendly travel option while helping reduce traffic congestion and parking demand for those who do need to drive.
The Hybrid LPA strikes a strong balance between cost, constructability, and meaningful community benefits, and it supports Metro's goals of improving regional connectivity and sustainability. I strongly encourage Metro to advance this alternative and keep the project moving forward.
Thank you for your time and consideration.
Sincerely,
Cesar Vasquez

Dear Metro Directors,

I'm writing as someone who actually uses public transportation and wants this light rail project to succeed. That's exactly why I'm asking you to support the Hawthorne Boulevard alignment and reject the far inferior ROW option.

If the train is built on Hawthorne Boulevard, I would absolutely ride it. That corridor already connects to frequent bus service, shops, jobs, and the future redevelopment of the South Bay Galleria. It's the kind of place where light rail naturally becomes part of daily life—visible, convenient, and easy to use—rather than something people have to go out of their way to reach.

This isn't just my personal preference. Metro's own ridership projections show that Hawthorne Boulevard would generate roughly 35% higher ridership. That should matter.

By contrast, the ROW option would cut through residential neighborhoods, placing a real burden on the people who live there while doing very little to improve the experience for riders like me.

This is a once-in-a-generation project. Hawthorne Boulevard is an opportunity to get it right—to build transit where people will actually use it and where it strengthens the surrounding community instead of damaging it. I hope you'll choose the alignment that reflects smart planning, common sense, and respect for the riders this system is meant to serve.

Thank you for your time and consideration.

Respectfully,

Jason Croddy

Redondo Beach

Hi,
I have lived in the South Bay for 8 years and have lived about a mile from the proposed Redondo Beach station for about the last 2 of those years. I am in support for the ROW alignment as it would be able to be built and finished sooner and cost much less than the Hawthorne bvld alignment, among other very good reasons. I don't think that the loud minority should be able to successfully derail these plans, or cause it to be cancelled entirely.

Thank you,
-Greg Baghdikian

Greetings LA Metro Board,

I am writing to express my support for Metro's decision to advance the C Line Extension to Torrance using the Hybrid LPA.

The proposed alignment makes practical sense, as it follows an existing freight rail corridor that has long been used for transportation purposes. Utilizing this right-of-way is a reasonable and efficient approach that modernizes existing infrastructure rather than introducing a new disruption.

Also, extending the C Line will improve regional connectivity, reduce reliance on car travel, and help address long-standing transit gaps in the South Bay. I encourage the Board to continue moving this project forward and to prioritize long-term mobility benefits for the broader Los Angeles region.

Please help everyone make LA a better place.

Best,

Giani

I live in north redondo, walking distance to the Redondo Beach transit center, and I support the C line extension to Torrance. I prefer options which locate the station at the Redondo Beach transit center, but I accept any option that can survive the process and actually get built.

I prefer options which connect to the transit center because a long walk between a metro stop and a bus stop makes commutes longer. Personal security is at risk on a long walk, especially in the dark around a failing mall. And a long walk is hard in bad weather or after dark. It will prevent some people from using the system. In the late teens I commuted from Redondo to Pasadena, the long walk and 20 minute hit on the connection between silver line and gold line at union station reduced my use of the system. In the winter time I would not do it, I did not like walking to or waiting at the station outside union station for the silver line bus.

I look forward to simpler access to LAX and BMO stadium from Redondo. I also used to commute weekly to Oakland on Southwest from LAX, and often, on Friday nights, my wait for an Uber would be longer than my flight from Oakland. A metro connection that took me home would have been great. I look forward to easy local access with good parking to a metro station.

Thanks,

Roger Carlson
Redondo Beach

Dear Metro Board Members and Project Staff,

I am writing to express my strong support for keeping the C Line (Green Line) extension to Torrance on the Metro-owned right of way. Using the existing right of way is the most efficient, cost-effective, and least disruptive option, and it allows this long-anticipated project to move forward more quickly while delivering meaningful transit benefits to the South Bay.

A right-of-way–based alignment improves reliability, reduces construction impacts on neighborhoods, and maximizes the return on public investment by leveraging infrastructure Metro already owns. Most importantly, it provides a faster, more dependable connection for riders who depend on transit for work, school, and daily life.

I urge Metro to prioritize this alignment and keep the project focused on delivering high-quality rail service to Torrance and surrounding communities as soon as possible.

Thank you for your time and consideration.

Sincerely,
Jack Pilowsky

Hi
I wanted to send a quick note stating my very strong support for the C line extension project to Torrance. The South Bay has very little public transport and it's obvious that this is the most time and cost effective solution. All other potential solutions will take many more years, cost significantly more and will have a negative environmental impact to our region. Let's get this done!

Hello,

Please support the FEIR Certification and please choose the Hybrid LPA plan.

Bringing quality metro service to underserved areas is critical in meeting climate goals and supporting the shift to a public transit oriented city.

Using the right of way already used by freight rail is a sound financial decision and delivering these projects asap should be the entire goal of the metro board.

Please choose Hybrid LPA.

Thank you.

Dear Metro Board Members,

I am writing to express my strong support for certification of the Final EIR and advancement of the C Line Extension to Torrance using the staff-recommended Hybrid alignment in the existing Metro-owned rail right-of-way.

Metro has already spent years studying this project, and the Hybrid alignment represents the most feasible, cost-effective, and deliverable option. It avoids unnecessary land acquisition, minimizes community disruption, and makes use of an existing corridor that Metro already owns. Importantly, it is the alignment that has been fully environmentally reviewed and selected as the Locally Preferred Alternative.

Reopening the alignment decision at this stage - particularly in favor of the Hawthorne alternative - would significantly increase costs, introduce major coordination and permitting risks, and require years of additional environmental review. As Metro staff have clearly stated, this would not improve outcomes and would instead place the entire project at risk of indefinite delay or cancellation.

Claims that the project lacks funding are misleading. The C Line Extension is already more than 50% funded, which places it in a stronger position than many projects at this phase. Delays will only drive costs higher and make future funding more difficult, not easier.

This project is critical for the South Bay and the region as a whole. It improves mobility, safety, and environmental outcomes while advancing long-promised rail access for communities that have waited decades. A small but vocal group should not be allowed to override years of technical analysis, public process, and regional need.

I respectfully urge the Board to follow staff's recommendation, certify the EIR, reaffirm the Hybrid alignment, and allow this long-delayed project to move forward without further unnecessary delay.

Thank you for your time and leadership.

Sincerely,
Joshua Luong

I urge you to approve the Final EIR for the C/K Line Extension to the Torrance Transit Center Locally Preferred Alternative routed along the freight train right-of-way. I believe that routing could be completed sooner than any alternatives and at low cost.

As a scientist, I understand that climate change is a very serious threat to human civilization, and transportation is a significant contributor of the greenhouse gases responsible. Worse, climate change is irreversible and the time window for limiting peak temperatures that are still tolerable for humans is short. Travel by rail is the most effective way to minimize the environmental cost of transportation.

I am a resident of Rancho Palos Verdes who currently uses the Metro J Line (Silver) 950 from the Harbor Gateway Transit Center (HGTC) when traveling to downtown Los Angeles (DTLA). Sometimes my trip begins with the Metro #344 bus from near my home; other times I drive to, and park at, the HGTC. Though a lengthy trip, especially when I utilize the bus, I do this to minimize my carbon footprint.

I look forward to the time when I can utilize the long-promised light-rail alternative from Torrance to LAX and DTLA. It will further decrease my carbon footprint, while shortening my transit time.

David Hall

Hello,

I am a South Bay native and was very excited to hear the rail expansion project to add new stops to the K Line in Redondo Beach and Torrance. I am voicing my strong support for the FEIR Certification and the Hybrid LPA plans that Metro approved.

Choosing the other Hawthorne Plan will add over $700 million dollars to the project and be much more labor and time intensive, disrupting large areas of the region rather than just a few neighborhoods already along the train tracks.

I am imploring you to stick with the Hybrid Alignment and certify Metro's plan for rail in the South Bay!

Thank you,
Penelope Orpe

LA Metro Board Clerk,

Honorable Chair Dutra and Directors of the LA Metro Board,

Let's put things into perspective based on data.

The largest poll conducted among 670 residents of Lawndale, Redondo Beach, and Torrance indicate 67% support versus 7% oppose. That is a whopping 9.5 residents support versus every 1 resident who voiced opposition. The poll has a margin of error of ±4%. https://thesource.metro.net/recent-poll-show-community-support-for-c-line-green-extension-to-torrance-project/

In that polling research, 66% of the respondents prefer the Metro Right of Way versus 19% for the Hawthorne option.

I am a 25 year resident of the South Bay. I can't imagine a more important project that helps improve commute times for both people who rely on transit and those who drive (by removing and diverting 15 million vehicle miles off our existing roads). Traffic will only worsen with every delay and widening roads and highways are impossible. The Metro is our biggest infrastructure priority as voted by Measure M and Measure HLA. Voters want the transit problem solved. The voters want results.

Thank you.

Hi there,

I am a Los Angeles resident in strong support for C Line - Hybrid Alignment. Supporting any other alignment will drastically extend the project timeline, increase the budget and potentially even kill the project. Those in opposition do not constitute the majority of the people in this area who will greatly benefit from the construction and function of this line. It is important than Metro Board and Staff not cow to the wealthy minority who chose to own a home next to an active rail line and are somehow at odds with that decision.

Metro to use its existing ROW. There is no good faith argument against this.

Dear members of the LA metro bord.

Please finalize the hybrid alignment for the Torrance extension, as a commuter living in Torrance this extension would be a game changer for me and many others in the Torrance community, taking the 344 bus to the harbor transit center to connect up with rail services in Downtown LA is very, very, very, inconvenient due to it's overwhelmingly infrequent schedule. Even though the 232 bus does take you directly to the LAX transit center it is still inefficient due to the route taking 1hr 45min from where I lived on PCH & Anza Ave.

Being able to take a Torrance transit bus to the Torrance transit center and connect with the K-line would greatly reduce travel time and greatly increase connectivity to the greater LA region for the people of Torrance & South Bay as a whole.

As a resident of Redondo Beach and an aerospace worker in El Segundo, I speak for myself and my colleagues who also live in South Bay that this rail extension is absolutely necessary and vital. We absolutely need this extension to provide safe, reliable, and cost efficient transport in our area. The freight crossing improvements alone will save pedestrian lives.

I am a single topic voter on this issue and I and everyone I know will be voting specifically for anyone who supports improving our transit. Cancelling the extension will be an insurmountable loss for our community and the communities beyond ours, such as Long Beach.

Hi Clerk,

The South Bay metro extension is incredibly important to making Los Angeles a sustainable city. I support using the metro right of way section and not the EXPENSIVE hawthorn plan. As someone who drives through this area often with traffic unsustainable, we need this project done ASAP as a pressure value to the ever expanding LA area. I am asking you to support the right of way plan and get this project approved so that we can build a better LA.

Dear LA Metro Board,

I am unable to attend this Thursday's meeting (on 1/22/26 at 10 am). Therefore please accept this comment instead.

For the South Bay light rail extension to Torrance, please support FEIR certification and approval of the hybrid LPA. Elevated rail is the way to go. The Hawthorne option is too expensive.

Also, please support, advance and build the modified alternative 5 proposal for the Sepulveda Corridor.

Thank you,
Sprague Terplan

Hi Metro,

As an LA County resident and LA Metro commuter, I want to voice my support for the South Bay Extension. In particular, I want to voice my support for utilizing the existing right-of-way for the extension. A Hawthorne alignment is much more costly for taxpayers like myself, in exchange for very little benefit to ridership. Utilizing existing rail right-of-way is a slam dunk for transit, and many construction headaches can be avoided with using an alignment in existing rail right-of-way.

Thanks,
Andy Zhang

I strongly endorse the chosen Modified Alternative 5 for the Sepulveda Transit Corridor project.
I have lived near the 405 in Sherman Oaks for 36 years. A lot of time has been wasted in traffic on that freeway.
The last "improvements" took a long time and increased traffic during their construction, yet did not improve travel time on the 405 at all.
Thank you for continuing to see that this Alternative 5 option comes to fruition.

As a longtime resident of the area and supporter of the Metro rail system, I'm writing to express my support for the existing FEIR certification and the Hybrid LPA in regard to the Sepulveda Line South Bay Extension.

As metro employees have urgently pointed out, the Hawthorne alternative is highly problematic and inferior in the most significant ways to the existing Hybrid LPA.

Respectfully,

-Darren Moloney

Dear Metro Board of Directors.

I am writing to ask you to truly consider the environmental cost of building two Metro rail lines through the right-of-way in Lawndale. If Metro chooses the ROW, it will permanently destroy one of the last remaining green spaces in our city.

This corridor is not an empty or "desolate" strip of land, despite how it was portrayed in images included in the FEIR. Those photos do not reflect how the ROW actually functions day to day or how our community experiences it. It is a continuous green corridor in a city that is already park-poor and heavily paved. Once it is built over, it is gone for good. We will never have the chance to turn this land into something beautiful or restorative again.

There is no mitigation that can replace a living green corridor with steel, ballast, fencing, and constant train traffic.

Right now, the ROW serves a real and important environmental purpose. It absorbs rainwater during storms, reducing runoff and localized flooding in surrounding neighborhoods. It provides rare permeable ground in a city dominated by concrete and asphalt. As climate change brings heavier and more unpredictable rainfall, this function becomes more critical, not less.

The trees and grass along the ROW also help manage extreme heat. When temperatures climb above 100 degrees in other parts of the city, areas near the ROW are often noticeably cooler. That matters for public health, especially for children, seniors, and people without access to air conditioning.

The ROW is also habitat. Birds nest there. Bees and other pollinators rely on it. Native plants and grasses survive there. These are not abstract or theoretical benefits. They are part of a functioning urban ecosystem that supports air quality, biodiversity, and climate resilience. Once the land is paved and fenced off, those benefits disappear permanently.

What makes this especially difficult is that there is a better alternative.

Our community envisions a future where this corridor remains green and becomes a shared asset, not a sacrifice zone. A bike and pedestrian path along the ROW could connect neighborhoods, schools, and businesses and provide a truly multimodal transportation option for the South Bay. It would encourage active transportation, reduce car trips, improve public health, and connect people without destroying irreplaceable green space.

While the FEIR mentions bike and walking paths, there is significant confusion about what is actually being proposed. Many people believe a bike path would run along the entire rail corridor. It would not. The longest continuous stretch described is about eight blocks, and even that is conditioned with language like “if feasible.” We have measured the ROW, and a safe bike path directly adjacent to an active freight rail line simply does not fit.

This is deeply concerning, because we have already seen how conditional language can mislead the public. The DEIR used the phrase “residential acquisitions anticipated,” and just recently, residents began receiving eminent domain process letters from Metro. Words like “anticipated” and “where feasible” matter, and people deserve clarity, not assumptions.

I also want to address the claim circulating online that our community is using environmental arguments as a way to oppose transit. That could not be further from the truth. Environmentalism does not only happen in remote wilderness or on mountain tops. The most meaningful environmental advocacy often happens right at home, by protecting local green space and holding public agencies accountable for the impacts of major infrastructure projects.

Our group is as local as it gets. We live here. We walk this corridor. Our kids play near it. We see how it functions every day. Advocating for the land our community relies on is not performative environmentalism. It is environmental justice.

This is not a rejection of transit. It is a call for smarter planning that aligns transportation goals with environmental responsibility. Building rail along Hawthorne Boulevard allows Metro to deliver much-needed transit while preserving a rare and valuable environmental resource in Lawndale. Choosing the ROW option does the opposite. It sacrifices long-term environmental resilience for short-term convenience.

Once this green space is gone, it cannot be rebuilt. No amount of landscaping elsewhere will replace a continuous corridor that has quietly served this community for generations.

Please choose the option that protects both our future mobility and our environment. Preserve the ROW as green space. Build transit where it belongs. Give Lawndale a future that includes both transportation and nature, not one at the expense of the other. It's a beautiful space, both in the beauty of nature, but also how a space like that brings people together.

Hello,

My name is Bryce Cracknell, I'm environmental justice advocate, Moderator of McCarty Memorial Christian Church, Board Member of Partnership for Growth LA, and a resident of the West Adams community writing to fully endorse and express my support for the South Bay extension to Torrance as-is.

This extension would be built as a fully grade separated line next to an active rail line that Metro already owns. No resident will be displaced by this plan, and it makes the existing rail line safer for bikers, pedestrians, and residents by adding sidewalks. Most importantly, it is the most cost-effective and least disruptive option to extend Metro into Torrance. Please listen to the Metro staff as they're speaking from experience and do not cave in to NIMBY interests co-opting the language of environmental justice to try and stop this from moving forward.

Please do the politically brave thing that Angelenos for generations to come will be extraordinarily thankful for and save the South Bay extension. Thank you so much.

All the best,
Bryce

To whom it may concern,

You must support the Hybird LPA for the South Bay Extension. A robust transit network will set Los Angeles for increased connectivity and productivity for generations to come. This project is the best chance we have to connect Long Beach with LAX and to provide service and jobs for all of Los Angeles. We must be bold and create positive, lasting change that benefits all Angelenos, not the small few.

Dear Metro,

My name is Emily, and I am a Torrance resident. I am writing to raise a concern I only recently became aware of, which I believe is important for the Board to fully understand as you consider the Final Environmental Impact Report.

Although I live in Torrance, I have close friends who live along the right-of-way, and I know the area well. A few years ago, I received a questionnaire from the City of Torrance related to the C Line Extension. Based on how it was presented and worded, I understood it to be an internal City of Torrance survey intended to inform local decision-making.

The questionnaire itself was confusing and, in my view, extremely misleading. The framing and language strongly suggested a preferred outcome, but did not clearly explain the broader context or the alternatives being studied. Frankly, it read more like propaganda than neutral information.
